Several years ago a

friendly looking young
man walked into my office
at the University
Department of
Dermatology in Cologne,
introduced himself as a

diplomate chemist, executive member of a family-owned, rather small German company manufacturing hair care products, and proposed to me straight forward to organize an international meeting on hair research. In view of the large number of new developments in the field something like this should be done after all, he said; he also promised to provide financial support. Such a meeting should be on the highest possible level, I said; and he agreed. I took the

challenge and my visitor kept his promise. Three years later the First International Hair Congress was organized at the sophisticated new Congress Center in Hamburg, in which 630 participants from 36 countries were registered. After three and a half days of formal sessions, informal discussions, workshops and poster presentations our unanimous feeling was that this has been a most successful meeting. The young chemist was right. The idea was excellent.

The growth and presence of hair and its distribution over the human body as a cosmetic attribute has become during the last two decades a matter of tremendous emotional significance. Hair can be rather easily formed according to one's sense of style, representing his personal image and his social feeling. If it becomes unacceptable or out of fashion, the hair style can be easily changed; the hair regrows as a biological requisite, without any additional cost.

FAST FACTS: DISORDERS OF THE HAIR AND SCALP

BoD – Books on Demand
In this book, Dr. Lenzy lays out the 15 different types of hair loss and scalp disorders, the symptoms that are present for each of them, a patient's experience with each type of hair loss, the treatment procedures that she uses, as well as the ones that may be prescribed in general cases. By reading this book, you will feel more knowledgeable and empowered while working

with your Dermatologist, Trichologist and Hair Stylist to tackle any hair loss issue you may be encountering.

A DERMATOLOGIST AND COSMETOLOGIST'S GUIDE TO

UNDERSTANDING HAIR!

CRC Press
Conditions of the hair and scalp often cause significant psychological distress and sometimes physical discomfort for patients. Similarly, finding the right treatment can prove challenging for the physician. *Hair and Scalp Treatments -- A Practical Guide*, focuses on therapy with each chapter briefly describing the disease to the reader and then teaching the step-by-step therapeutic algorithm.

Procedures commonly used in the treatment of alopecias are also reviewed and detailed in specific chapters. This book also discusses everyday questions that patients commonly ask doctors and provides practical tips such as how to recommend the best shampoo, conditioner or hair dye for your patient, or how to prescribe the right nutritional supplements. There are additional sections on future treatments on the horizon and how regenerative medicine

can be used. Hair and Scalp Treatments -- A Practical Guide, is the only book of its kind focused on treatment and addresses topics that are not covered by current titles on hair disorders. Written and edited by leading experts in the field, this practical guide can be used not only by dermatologists but by general practice and family physicians as well. *Common Presenting Signs, Differential Diagnosis, and Treatment* Elsevier Health Sciences

General practioners are

often the first stop for patients with hair and scalp problems. However, most GPs have little if any knowledge and training in this field. This small pocket book is a clear, well-written text for quick reference, with a guide to diagnosis and suggestions as to the current best treatments available. The book provides information about the physiology of hair and hair defects, advice on carrying out an examination, hair loss, and cosmetic damage. The author then describes dermatological disorders

of the scalp and their management. It is highly visual, containing many photographs and micrographs to aid the non-specialist in diagnosis. This book is designed for primary-care practice, but will also be of use to junior dermatologists and other doctors working in this area.

Dermoscopy - the examination of the skin under special illumination - has been increasing in popularity as a diagnostic

investigational method, but the skin containing hair poses rather different problems from the skin on the rest of the body. This pioneering text examines the different conditions that can be investigated and the results that can be obtained. This source contains specially commissioned artwork tables for ease of reference.

Chemical and Physical Behavior of Human Hair CRC Press

Hair is the subject of this book, including the anatomy of the hair

follicle, developmental stages, analyzed by light and electron microscopy, hair ultrastructure, nerve and blood supply, specialized hairs and hair organs, and a review of the present techniques to cultivate hair follicle cells in vitro. In the clinical part several chapters describe the most important diseases and possibilities for treatment. Hair care products and their toxicology are the subject of further sections. Extensive reviews of the antiandrogens, a most important group of drugs

influencing hair growth, and of their clinical use in conditions such as androgenetic alopecia and hirsutism are included as well. Finally, surgical techniques for hair transplantation are discussed. This book is a standard textbook for everything pertaining to hair under normal and pathological conditions.
