"...[a] very unique book that integrates benefits of modular
systems for enhanced sustainability to meet the global
challenges of rapid and sometimes uncontrolled industrialization
in the 21st century."—Pinakin Patel, T2M Global This book
examines the role of the modular approach for the back end of
the energy industry—energy usage management. It outlines the
use of modular approaches for the processes used to improve
energy conservation and efficiency, which are preludes to the
prudent use of energy. Since energy consumption is
conventionally broken down into four sectors—residential,
transportation, industrial, and commercial—the discussions on
energy usage management are also broken down into these four
sectors in the book. The book examines the use of modular
systems for five application areas that cover the sectors
described above: buildings, vehicles, computers and
electrical/electronic products, district heating, and wastewater

treatment and desalination. This book also discusses the use of a modular approach for energy storage and transportation. Finally, it describes how the modular approach facilitates bottom-up, top-down, and hybrid simulation and modeling of the energy systems from various scientific and socioeconomic perspectives. Aimed at industry professionals and researchers involved in the energy industry, this book illustrates in detail, with the help of concrete industrial examples, how a modular approach can facilitate management of energy usage.

ARCHITECTURE & SUSTAINABLE DEVELOPMENT (VOL.2)

Presses univ. de Louvain

Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better.

Popular Science

This report examines the application of plastics in European cars in the middle of the year 2000. It evaluates the changes in use and considers possible developments over the next decade. The use of plastics for specific components is examined, comparison is made between competitive materials and examples of commercial application are included. Estimates are presented for current plastics usage in European cars with forecasts to 2008.

Popular Science

Originally published in 1978, this volume reflects the proceedings

of a conference held in February 1977 in California and is a natural successor to the earlier volume Eye Movements and Psychological Processes (Monty & Senders, 1976). The second conference was aimed at providing a greater opportunity for discussing the "higher mental processes" touched on in the first volume. Part 1 is devoted to an intensive review of the underlying processes and psychological functions of eye movements. It includes discussions of the relationships of cortical and subcortical visual areas to eye movements and visual processing

associated with them; information about the position of the eye in the head and the perception of visual space; saccades and visual functioning; and masking. In further parts it goes on to look at: methodology and models; cognitive processes; reading processes; looking at static and dynamic display; and finally chapters on problems and applications.
