OMB No. 5638904653248 edited by

### DILLON LENNON

#### Entrepreneurship in Power Semiconductor Devices, Power Electronics, and Electric Machines and Drive Systems

Routledge

Machine learning methods are changing the way we design and discover new materials. This book provides an overview of approaches successfully used in addressing materials problems (alloys, ferroelectrics, dielectrics) with a focus on probabilistic methods, such as Gaussian processes, to accurately estimate density functions. The authors, who have extensive experience in this interdisciplinary field, discuss generalizations where more than one competing material property is involved or data with differing degrees of precision/costs or fidelity/expense needs to be considered.

#### THE HANDBOOK OF EUROPEAN DEFENCE POLICIES AND ARMED FORCES

K.K. Publications

A different kind of politics for a new kind of society--beyond work, scarcity and capitalism In the twenty-first century, new technologies should liberate us from work. Automation, rather than undermining an economy built on full employment, is instead the path to a world of liberty, luxury and happiness--for everyone. Technological advance will reduce the value of commodities--food, healthcare and housing--towards zero. Improvements in renewable energies will make fossil fuels a thing of the past. Asteroids will be mined for essential minerals. Genetic editing and synthetic biology will prolong life, virtually eliminate disease and provide meat without animals. New horizons beckon. In Fully Automated Luxury Communism, Aaron Bastani conjures a vision of extraordinary hope, showing how we move to energy abundance, feed a world of 9 billion, overcome work, transcend the limits of biology, and establish meaningful freedom for everyone. Rather than a final destination, such a society merely heralds the real beginning of history.

Remembering Women's Activism ACCA - F6 Taxation (Russia) (for the December 2017 exam)

On February 26<sup>th</sup> 2014, the National Academies of Sciences, Engineering, and Medicine's Forum on Global Violence Prevention convened a workshop titled Mental Health and Violence: Opportunities for Prevention and Early Intervention. The workshop brought together advocates and experts in public health and mental health, anthropology, biomedical science, criminal justice, global health and development, and neuroscience to examine experience, evidence, and practice at the intersection of mental health and violence. Participants explored how violence impacts mental health and how mental health influences violence and discussed approaches to improve research and practice in both domains. This publication summarizes the presentations and discussions from the workshop.

#### Immunity to Human Fungal Pathogens: Mechanisms of Host Recognition, Protection, Pathology, and Fungal Interference

Springer Nature

This book examines the development of bilateral energy relations between China and the two oil-rich countries, Kazakhstan and Russia. Challenging conventional assumptions about energy politics and China's global quest for oil, this book examines the interplay of politics and sociocultural contexts. It shows how energy resources become ideas and how these ideas are mobilized in the realm of international relations. China's relations with Kazakhstan and Russia are simultaneously enabled and constrained by the discursive politics of oil. It is argued that to build collaborative and constructive energy relations with China, its partners in Kazakhstan, Russia, and elsewhere must consider not only the material realities of China's energy industry and the institutional settings of China's energy policy but also the multiple symbolic meanings that energy resources and, particularly, oil acquire in China. China's Energy Security and Relations with Petrostates offers a

nanced understanding of China's bilateral energy relations with Kazakhstan and Russia, raising essential questions about the social logic of international energy politics. It will appeal to students and scholars of international relations, energy security, Chinese and post-Soviet studies, along with researchers working in the fields of energy policy and environmental sustainability.

Maritime Security Challenges in the South Atlantic Springer

Iconoclasm and the Museum addresses the museum's historic tendency to be silent about destruction through an exploration of institutional attitudes to iconoclasm, or image breaking, and the concept's place in public display. Presenting a selection of focused case studies, Boldrick examines long-standing desires to deface, dismantle, obscure or destroy works of art and historic artefacts, as well as motivations to protect and display broken objects. Considering the effects of iconoclastic practices on artworks and cultural artefacts and how those practices are addressed in institutions, the book examines changing attitudes to the intentional destruction of powerful artworks in the past and present. It ends with an analysis of creative destruction in contemporary art making and proposes that we are entering a new phase for museums, in which they acknowledge the critical roles destruction and loss play in the lives of objects and in contemporary political life. Iconoclasm and the Museum will be important reading for academics and students in fields such as museum and gallery studies, archaeology, art history, arts management, curatorial studies, cultural studies, history, heritage and religious studies. The book should also be of great interest to museum professionals, curators and collections management specialists, and artists.

#### QUORUM NETWORK (SENSING/QUENCHING) IN MULTIDRUG-RESISTANT PATHOGENS

CRC Press

Across diverse academic fields, scholars and practitioners are engaged in developing interventions to promote outcomes like health and quality of life. Indeed, such is the apparent efficacy of such interventions, that there are many policy-led initiatives to implement these at national and international scales. However, few scholars or practitioners have thought in any systematic and critical way about the importance of contextualizing these interventions, i.e., considering how the impact of such interventions may be affected and mediated by specific sociocultural factors (from gender, to ethnicity and socio-economics). The aim of the Research Topic "The Sociocultural Context of Psychosocial Interventions" was to address this lacuna. As such, we tried to help bringing a more 'contextual' mindset to the implementation of health and wellbeing interventions. This may help to shift the way such interventions are designed and implemented, both at a granular local level (i.e., influencing individual practitioners) and at a large-scale macro level (e.g., influencing policy makers). Themes within this Research Topic have concerned both macro-sociocultural as well as meso-and micro-layers, and the peculiarities of implementing real world research based on these levels. There has been room for physical and mental health, for family relationships, for educational contexts and even for the effects of crime. Some works have included interesting methodological discussions on the integration of different ecological layers or the modal distribution of our interests. For us it has been very important to work giving a greater diffusion to these issues since, considering psychosocial interventions in the context in which they occur, goes beyond an epistemological or methodological discussion. Rather, these considerations seriously affect the ability of practitioners to really reach the people who need their interventions, listening to their needs and respecting their preferences. For the editors of this book, then, the contextualization of interventions means considering the people who receive them as full citizens immersed in complex societies where factors such as social justice and health or well-being do not float apart in space but affect each other dialectically. We therefore think that the duty of both academics and practitioners is not to forget that it is as important to evaluate the direct effect of our interventions as the influence we have in the society as a whole when we carry them out. We hope you enjoy reading

these works and that their dissemination stimulates new lines of research committed to both good practise and social transformation.

**Hormonal Control of Important Agronomic Traits** Frontiers Media SA

"Tooth Enamel: Frontiers in Mineral Chemistry and Biochemistry, Integrative Cell Biology and Genetics" incorporates the proceedings of the 9th International Enamel Symposium (Enamel 9) hosted in the UK and chaired by Professor Jennifer Kirkham and Professor Ariane Berdal. The topic covers cellular and molecular aspects of the development, pathology, evolution and repair or regeneration of dental enamel. The original research papers and reviews will be of interest to all enamel and biomineralization researchers. Clinicians will find up-to-date thinking and opinion on the aetiology of enamel pathologies and their potential future treatment via novel strategies for preventing, repairing and regenerating enamel.

#### **DATA-BASED METHODS FOR MATERIALS DESIGN AND DISCOVERY**

World Scientific

The armed forces of Europe have undergone a dramatic transformation since the collapse of the Soviet Union. The Handbook of European Defence Policies and Armed Forces provides the first comprehensive analysis of national security and defence policies, strategies, doctrines, capabilities, and military operations, as well as the alliances and partnerships of European armed forces in response to the security challenges Europe has faced since the end of the cold war. A truly cross-European comparison of the evolution of national defence policies and armed forces remains a notable blind spot in the existing literature. The Handbook of European Defence Policies and Armed Forces aims to fill this gap with fifty-one contributions on European defence and international security from around the world. The six parts focus on: country-based assessments of the evolution of the national defence policies of Europe's major, medium, and lesser powers since the end of the cold war; the alliances and security partnerships developed by European states to cooperate in the provision of national security; the security challenges faced by European states and their armed forces, ranging from interstate through intra-state and transnational; the national security strategies and doctrines developed in response to these challenges; the military capabilities, and the underlying defence and technological industrial base, brought to bear to support national strategies and doctrines; and, finally, the national or multilateral military operations by European armed forces. The contributions to The Handbook collectively demonstrate the fruitfulness of giving analytical precedence back to the comparative study of national defence policies and armed forces across Europe.

**The Future of Innovation and Technology in Education** Springer Nature

This volume brings together international experts to provide fresh perspectives on geopolitical concerns in the South China Sea. The book considers the interests and security strategies of each of the nations with a claim to ownership and jurisdiction in the Sea. Examining contexts including the region's natural resources and China's behaviour, the book also assesses the motivations and approaches of other states in Asia and further afield. This is an accessible, even-handed and comprehensive examination of current and future rivalries and challenges in one of the most strategically important and militarized maritime regions of the world.

**Worldwide Mobilizations** Bloomsbury Publishing

Current regulatory guidelines for cardiac safety utilize hERG block and QT interval prolongation as risk markers. This strategy has been successful at preventing harmful drugs from being marketed, but criticized for leading to early withdrawal of potentially safe drugs. Here we collected a series of articles presenting new technological and conceptual advances, including refinement of *ex vivo* and *in vitro* assays, screens and models, and *in silico* approaches reflecting the increasing effort that has been put forward by regulatory agencies, industry, and academia to try and address the need of a more accurate, mechanistically-based paradigm of proarrhythmic potential of drugs. This Research Topic is dedicated to the memory of Dr. J. Jeremy Rice, our wonderful friend and colleague.

**ACCA - F6 Taxation (Russia) (for the December 2017 exam)** Routledge

Academic libraries are facing uncertain times. The international higher education environment is very volatile and academic libraries and librarians can play a major role in helping to strategically position their parent institution within it. In doing so, there needs to be clarity as to what the position of the academic library is with regard to the role and function it has within the university and how library leadership can have pan-institutional influence and impact. There are several ways in which the academic library can position itself and this collection demonstrates many of these. Strategic alignment with the university and its mission is a fundamental part of successful positioning, as is being flexible, adaptable and responsive to changing needs, requirements and expectations. Developments in research support and scholarly communications, as well as super-convergences with other academic support departments, are examples of such responsiveness. These topics along with other emerging themes, such as library functions and institutional partnerships and collaborations, are all discussed in the book and provide the reader with a rich variety of reflections and case studies on how academic libraries, from across the globe, have addressed their position within their institution. This book was originally published as a special issue of the journal *New Review of Academic Librarianship*.

**Assembling Exclusive Expertise** Rowman & Littlefield

Under increasingly intense newsroom demands, reporters often find it difficult to cover the complexity of topics that deal with racial and social inequality. This path-breaking book lays out simple, effective reporting strategies that equip journalists to investigate disparity's root causes. Chapters discuss how racially disparate outcomes in health, education, wealth/income, housing, and the criminal justice system are often the result of inequity in opportunity and also provide theoretical frameworks for understanding the roots of racial inequity. Examples of model reporting from ProPublica, the Center for Public Integrity, and the San Jose Mercury News showcase best practice in writing while emphasizing community-based reporting. Throughout the book, tools and practical techniques such as the Fault Lines framework, the Listening Post and the authors' Opportunity Index and Upstream-Downstream Framework all help journalists improve their awareness and coverage of structural inequity at a practical level. For students and journalists alike, *Reporting Inequality* is an ideal resource for understanding how to cover structures of injustice with balance and precision.

**Emergence of Gouda Community in Andhra Pradesh Politics** Frontiers Media SA

In the modern globalized world of work, society's capitalist and patriarchal norms perpetuate old and create new differences based on gender, class, ethnicity, age, and other social categorizations. This book proposes a novel conceptual framework offering theoretical and methodological insights for thinking through the present and future inequality challenges in the globalized world of work and working life issues in the context of spatio-temporal relations. Bringing together global feminist studies of intersectionality and transnationalism, work-life research, and studies of space, place, and identity, this edited collection responds to the growing interest in peripheries, rurality, and other spaces beyond the urban and business market centres. In crossing the theoretical boundaries

between intersectionality and peripherality, this volume brings these concepts together to identify how racism, capitalism and heteropatriarchy operate on bodies in the name of work, particularly as expressed in precarious labour conditions. It also advocates for transnational solidarity as part of feminist ethics, while providing an opportunity to reflect on ways forward for feminist intersectional studies of work and working life, drawing on embodied relationality and a feminist ethics of care. *Working Life and Gender Inequality* explores the intersectional nature of gender, class, race and other inequalities from a global and spatial perspective. It will be of value to researchers, academics, students, managers, consultants, and policy makers in the fields of organizational studies, leadership, feminist and gender studies, working life, intersectionality and transnational feminism.

**Arterial Aging and Age-Associated Arterial Diseases** Bloomsbury Publishing

*Remembering Women's Activism* examines the intersections between gender politics and acts of remembrance by tracing the cultural memories of women who are known for their actions. Memories are constantly being reinterpreted and are profoundly shaped by gender. This book explores the gendered dimensions of history and memory through nation-based and transnational case studies from the Asia-Pacific region and Anglophone world. Chapters consider how different forms of women's activism have been remembered: the efforts of suffragists in Britain, the USA and Australia to document their own histories and preserve their memory; Constance Markievicz and Qiu Jin, two early twentieth-century political activists in Ireland and China respectively; the struggles of women workers; and the movement for redress of those who have suffered militarized sexual abuse. The book concludes by reflecting on the mobilization of memories of activism in the present. Transnational in scope and with reference to both state-centred and organic acts of remembering, including memorial practices, physical sites of memory, popular culture and social media, *Remembering Women's Activism* is an ideal volume for all students of gender and history, the history of feminism, and the relationship between memory and history.

**BERNARD SHAW, SEAN O'CASEY, AND THE DEAD JAMES CONNOLLY**

Oxford University Press

This book explores the effective use of information and communication technology (ICT) in teaching and learning. Concept-laden and practice-driven discussions offer insights into the art and practice of employing virtual and augmented reality (VR/AR), electronic devices, social networks and massive open online courses (MOOCs) in education.

**Violence and Mental Health** Bloomsbury Publishing

This textbook provides a multidisciplinary introduction to global and international studies. Offering unrivalled breadth and depth, it covers all the key dimensions of the topic, including broad introductions to international politics and economics, and focused surveys of topics from human rights and migration to conflict and the environment. John McCormick's lucid writing style renders complex information understandable to all students. Full-colour photographs, maps, tables and figures bring the subject to life and innovative pedagogical features emphasize the importance of understanding perspectives and experiences different from one's own worldview. Assuming no prior knowledge of the subject, this textbook is ideal for undergraduate students worldwide who are taking introductory modules in global and international studies. The text can also be used by undergraduate students taking courses on globalization.

**The Sociocultural Context of Psychosocial Interventions** Frontiers Media SA

The findings of the contributed studies from this Research Topic reflect important aspects (hot topics) of Quorum network (Sensing/Quenching) in multidrug-resistant pathogens, which including: (i) novel mechanisms of QS and detection techniques, (ii) QS/QQ in clinical multidrug resistant strains, (iii) the relationship between QS/QQ as well as multidrug resistance, and (iv) the application of new QQ therapies.

**The Putin Paradox** Emerald Group Publishing

As Cold War battle lines are seemingly re-drawn, Russia's various 'frozen' war zones (ongoing separatist conflicts) are often cited as particularly volatile and assumed by some Western commentators and policymakers to be 'next' on Putin's 'wish list'. But, as Helena Rytövuori-Apunen demonstrates here, this is a gross (and dangerous) oversimplification that will only serve to fuel the vicious circle of reciprocal military escalation. Drawing on a range of empirical research and across separatist conflicts in Georgia (South Ossetia and Abkhazia), Moldova (Transnistria and Gagauzia) and Azerbaijan (Nagorno-Karabakh) and the 2014 annexation of Crimea from Ukraine, her timely book provides a balanced assessment and critique of the assumptions and misunderstandings that inform mainstream discussions, as well as placing the conflicts in their proper and complex historical contexts. At a time when there is an increasing tendency to view Russia as the source of all instability in Eastern Europe, *Power and Conflict in Russia's Borderlands* is essential reading for anyone interested in the geopolitics of post-Soviet Russia, as well as policymakers and practitioners of peace/conflict resolution studies.

**The European Union and the Return of the Nation State** Policy Press

Trump and Mussolini depicts two historic individuals, though divided by a century--the former at the dawn of mass society, the latter of social networking--as men of beginnings, exploiting these unique moments to their advantage and utilizing rhetoric, mannerism, and body language as weapons of communication often against truth and common good.

**Power and Conflict in Russia's Borderlands** Bloomsbury Publishing

Fungi are found in virtually every environment, and comprise a significant portion of the normal microflora of healthy individuals. Some species of fungi are aeroallergen sources capable of inducing sensitization and causing exacerbation of asthma and respiratory allergy. Others are transmissible between hosts and may cause no symptoms in healthy individuals. However, immune suppressed individuals may develop invasive disease marked by tissue invasion with a potential for widespread dissemination. Existing therapies for patients consist of antifungal drugs, yet these require prolonged administration with the possibility of adverse side effects, and may be rendered ineffective by the emergence of antifungal-resistant strains. It is therefore of interest to increase our understanding of host-pathogen interactions in order to facilitate the development of new therapies for individuals suffering from fungal infection and disease. These early interactions are shaped by an array of constituent and secreted factors that stimulate or inhibit host immune responses toward protective or detrimental immunity. Likewise, an array of preformed factors and tissue-resident cells provide early protection from fungal infection and provide extracellular signals that result in localized recruitment of inflammatory cells and determine the character of subsequent adaptive antifungal immunity. This Research Topic explores the host and fungal pathways that program innate and adaptive immunity and the immune cells, molecules, and regulatory pathways that comprise protective or detrimental responses to fungal exposure or infection. Over 200 authors contributed reviews, opinions, or original research focusing on antifungal immunity in humans and in experimental models. We believe that the results of these efforts provide a benchmark for further advances and improved antifungal therapies.
