"This fascinating little
volume explores the
stuff that dreams are
made of and the role
the pandemic is
playing in them. The
dreams from Barrett's
survey are riveting
vignettes--from
terrifying to touching
to hilarious. Her
decades of scientific

research and clinical practice inform incisive commentary on what these dreams reveal about society's response. She offers simple exercises for managing anxieties over COVID-19 and for inspiring adaption in this unique period of history. A great read!" - Amy Tan, author of *The Joy Luck Club*

DREAM: I looked down at my stomach and saw dark blue stripes. I "remembered" these were the first sign of being infected with COVID-19. DREAM: My home was a Covid-19 test center. People weren't wearing masks. I'm taken aback because I wasn't asked to be a test site. I'm worried that my husband and son (who actually lives out of state) will catch it because of my job as a

healthcare worker. DREAM: I was a giant antibody. I was so angry about COVID-19 that it gave me superpowers, and I rampaged around attacking all the virus I could find. I woke so energized! Since the COVID-19 pandemic swept around the world, people have reported unusually a vivid and bizarre dream lives. The virus itself is the star of many--literally or in one of its metaphoric guises. As a dream researcher at Harvard Medical School, Deirdre Barrett was immediately curious to see what our dream lives would tell us about our deepest reactions to this unprecedented disaster. *Pandemic Dreams* draws on her survey of over 9,000

dreams about the COVID-19 crisis. It describes how dreaming has reflected each aspect of the pandemic: fear of catching the virus, reactions to sheltering at home, work changes, homeschooling, and an individual's increased isolation or crowding. Some patterns are quite similar to other crises Dr. Barrett has studied such as 9/11, Kuwaitis during the Iraqi Occupation, POWs in WWII Nazi prison camps, and Middle Easterners during the Arab Spring. There are some very distinctive metaphors for COVID-19, however: bug-attack dreams and ones of invisible monsters. These reflect that this crisis is less visible or concrete than others we have faced.

Over the past three months, dreams have progressed from fearful depictions of the mysterious new threat . . . to impatience with restrictions . . . to more fear again as the world begins to reopen. And dreams have just begun to consider the big picture: how society may change. The book offers guidance on how we can best utilize our newly supercharged dream lives to aid us through the crisis and beyond. It explains practical exercises for dream interpretation, reduction of nightmares, and incubation of helpful, problem-solving dreams. It also examines the larger arena of what these collective dreams tell us about our instinctive,

unconscious responses to the threat and how we might integrate them for more livable policies through these times. Deirdre Barrett, PhD is a dream researcher at Harvard Medical School. She has written five books including *Pandemic Dreams* and *The Committee of Sleep*, and edited four including *Trauma and Dreams*. She is Past President of The International Association for the Study of Dreams and editor of its journal, *DREAMING*.

 "God does not play dice with the universe."
 So said Albert Einstein in response to the first discoveries that launched quantum physics, as they

suggested a random universe that seemed to violate the laws of common sense. This 20th-century scientific revolution completely shattered Newtonian laws, inciting a crisis of thought that challenged scientists to think differently about matter and subatomic particles. *The Dreams That Stuff Is Made Of* compiles the essential works from the scientists who sparked the paradigm shift that changed the face of physics forever, pushing our understanding of the universe on to an entirely new level of comprehension. Gathered in this anthology is the scholarship that shocked and befuddled the scientific world, including works by Niels Bohr, Max Planck,

Werner Heisenberg, Max Born, Erwin Schrodinger, J. Robert Oppenheimer, Richard Feynman, as well as an introduction by today's most celebrated scientist, Stephen Hawking.

Instead of powerful forces storming Seattle, a more insidious invasion is happening. Most of Joanne Walker's fellow cops are down with the blue flu—or rather the blue sleep. Yet there's no physical cause anyone can point to—and it keeps spreading. It has to be magical, Joanne figures. But what's up with the crazy dreams that hit her every time she closes her eyes? Are they being sent by Coyote, her still-missing spirit guide? The messages just aren't clear. Somehow Joanne has to wake up her sleeping friends while protecting those still awake, figure out her inner-spirit dream life and, yeah, come to terms with these other

dreams she's having about her boss....

Dreams Come to Life (Bendy, Book 1)

Columbia University Press

Oceanographer Tina Arenas studies climates of the distant geologic past, but her data has unexpectedly modern implications. Thrust into the growing controversy over global warming, Tina struggles to sort out her conflicting responsibilities to science and society. To complicate matters, she finds herself falling for Chip Stevens, a local organic farmer who has his own ideas about responsibility -- and love.

Dung Kai-cheung's A Catalog of Such Stuff

as Dreams Are Made On is a playful and imaginative glimpse into the consumerist dreamscape of late-nineties Hong Kong. First published in 1999, it comprises ninety-nine sketches of life just after the handover of the former British colony to China. Each of these stories in miniature begins from a piece of ephemera, usually consumer products or pop culture phenomena, and develops alternately comic and poignant snapshots of urban life. Dung's sketches center on once-trendy items that evoke the world at the turn of the millennium, such as Hello Kitty, Final Fantasy VIII, a Windows 98 disk, a clamshell mobile phone, Air Jordans, and cargo shorts. The protagonist

of each piece, typically a young woman, is struck by an odd, even overriding obsession with an object or fad. Characters embark on brief dalliances or relationships lasting no longer than the fashions that sparked them. Dung blends vivid everyday details—Portuguese egg tarts, Japanese TV shows, the Hong Kong subway—with situations that are often fantastical or preposterous. This catalog of vanished products illuminates how people use objects to define and even invent their own selves. A major work from one of Hong Kong's most gifted and original writers, Dung's archaeology of the end of the twentieth century speaks to perennial questions

about consumerism, nostalgia, and identity.

The Dreams That Stuff Is Made OfThe Most Astounding Papers of Quantum Physics--and How They Shook the Scientific World

A powerful and haunting classic about a girl haunted by her own dreams. Ill and bored with having to stay in bed, Marianne picks up a pencil and starts doodling - a house, a garden, a boy at the window. That night she has an extraordinary dream. She is transported into

her own picture, and as she explores further she soon realises she is not alone. The boy at the window is called Mark, and his every movement is guarded by the menacing stone watchers that surround the solitary house. Together, in their dreams, Marianne and Mark must save themselves... The perfect gift for girls aged 8+, this well-loved classic will delight a new generation of readers of the Faber Children's Classics list.

BOOK OF DREAMS

Munds Park Publishing
Big dreams are rare but highly memorable dream experiences that make a strong and lasting impact on the dreamer's waking awareness. Moving far beyond "I forgot to study and the finals are today" and other common scenarios, such dreams can include vivid imagery, intense emotions, fantastic characters, and an uncanny sense of being connected to forces beyond one's ordinary dreaming mind. In Big Dreams, Kelly Bulkeley provides the first full-scale cognitive scientific

analysis of such dreams, putting forth an original theory about their formation, function, and meaning. Big dreams have played significant roles in religious and cultural history, but because of their infrequent occurrence and fantastical features, they have rarely been studied in light of modern science. We know a great deal about the religious manifestations of big dreams throughout history and around the world, but until now that cross-cultural knowledge has never been integrated with scientific research on their psychological roots in the brain-mind system. In *Big Dreams*, Bulkeley puts a classic psychological thesis to the scientific test by clarifying and

improving it with better data, sharper analysis, and a broader evolutionary framework. He brings evidence from multiple sources, shows patterns of similarity and difference, questions prior assumptions, and provides predictive models that can be applied to new sets of data. The notion of a connection between dreaming and religion has always been intuitively compelling; *Big Dreams* transforms it into a solid premise of religious studies and brain-mind science. Combining evidence from religious studies, psychology, anthropology, evolutionary biology, and neuroscience, *Big Dreams* makes a compelling argument that big dreams are a

primal wellspring of religious experience. They represent an innate, neurologically hard-wired capacity of our species that regularly provokes greater self-awareness, creativity, and insight into the existential challenges and spiritual potentials of human life.

Dreams That Matter

Vintage

A modern classic, Einstein's Dreams is a fictional collage of stories dreamed by Albert Einstein in 1905, about time, relativity and physics. As the

defiant but sensitive young genius is creating his theory of relativity, a new conception of time, he imagines many possible worlds. In one, time is circular, so that people are fated to repeat triumphs and failures over and over. In another, there is a place where time stands still, visited by lovers and parents clinging to their children. In another, time is a nightingale, sometimes trapped by a bell jar. Now translated into thirty languages, Einstein's Dreams has inspired playwrights, dancers, musicians, and painters all over the world. In poetic vignettes, it explores the connections between science and art, the process of creativity, and

ultimately the fragility of human existence.

The Road Faber & Faber

"We cannot change the cards we are dealt, just how we play the hand."---Randy Pausch
A lot of professors give talks titled "The Last Lecture." Professors are asked to consider their demise and to ruminate on what matters most to them. And while they speak, audiences can't help but mull the same question: What wisdom would we impart to the world if we knew it was our last chance? If we had to vanish tomorrow, what would we want as our legacy? When Randy Pausch, a computer science professor at Carnegie Mellon, was asked to give such a lecture, he didn't have to imagine it as his last, since he

had recently been diagnosed with terminal cancer. But the lecture he gave-- "Really Achieving Your Childhood Dreams"-- wasn't about dying. It was about the importance of overcoming obstacles, of enabling the dreams of others, of seizing every moment (because "time is all you have...and you may find one day that you have less than you think"). It was a summation of everything Randy had come to believe. It was about living. In this book, Randy Pausch has combined the humor, inspiration and intelligence that made his lecture such a phenomenon and given it an indelible form. It is a book that will be shared for generations to come.

An original e-novel from the Original Series universe! The Enterprise-E arrives in unclaimed space for a rendezvous with the Starfleet science vessel Newton. Jean-Luc Picard and his crew have been ordered to assist the Newton with the final phase of its current mission—a mission that brings Picard face to face with something he never thought he would see again: the phenomenon known as the Nexus. Less than twelve years after it left the Alpha Quadrant, the Nexus ribbon has now returned. Tasked to track and study the phenomenon as it re-entered the galaxy, the

specialist science team on the Newton discovered that the orbital path of the Nexus has been radically altered by the actions of the rogue El-Aurian Tolian Soren—taking it deep into the territory of The Holy Order of the Kinshaya, one of the key members of the Typhon Pact. Starfleet Command is unwilling to allow the Kinshaya—and by extension, the Typhon Pact—free access to what is essentially a gateway to anywhere and anywhen, as a single operative could use the Nexus to change the course of galactic history....
