Most managerial accounting texts emphasize the mechanics of managerial accounting. While important, mechanics are not enough. To solve business problems, students need to understand how managerial accounting can improve decision-making, and when and where a particular tool or technique is appropriate. Balakrishnan's Managerial Accounting 1st edition presents accounting information in the context of business decision making. It combines the traditional topics of managerial accounting with a strategic framework that shows students how to construct decision models and measure information. By linking business decisions with accounting information students will be motivated to learn and make more informed decisions. Balakrishnan will appeal to courses where there is a true focus on decision making and accounting is placed within a business context.

The authors also present a problem-solving model, Steps for Better Thinking (SBT), which can be used to analyze and tackle various ethical scenarios. Essay from the year 2002 in the subject Business economics - Business Management, Corporate Governance, grade: 64% (England = B+), University of the West of England, Bristol (Bristol Business School - Bachelors Degree Business Administration), 31 entries in the bibliography, language: English, abstract: Accounting is an important aspect of management control. Budgets are unarguably the most obvious form of utilising accounting data to monitor and punish or reward strategic business units and consequently employees, regardless of whether they are managers or workers on the shop floor, according to their performance in relation to budgeted targets. "The budget is a financial plan for implementing the various decisions that management has made" (Drury 1997, p. 8). Participation in the formation process of budgets by those ultimately affected is practised in companies with the aim to generate a better-performing workforce. Empirical evidence on the effects of participative budgeting is ambiguous and the literature is fragmented. In this paper, I shall mainly review research on participative budgeting as well as other issues in budgeting and some critical perspectives on budgeting as a means of management control.
