A Perspective from Accounting and Finance Springer

This title provides clear and readily applicable guidance to corporate board members on the involvement of boards of directors in information technology (IT) governance. Specifically, it demonstrates ways in which board members can execute IT duties effectively. Specific tools such as a roadmap towards digital transformation and a board-level dashboard for digital strategy and oversight are also offered. While organizations are increasingly dependent on IT for the creation of business value, the evidence seems to indicate that boards of directors are not as involved in IT-related strategic decision-making and control as they should be. Research shows that high levels of board-level IT governance, regardless of existing IT needs, will improve organizational performance. This book provides unique insights into the inner workings of a specific board of directors group, with a focus on its IT governance structures and processes.

Modern businesses generate huge volumes of accounting data on a daily basis. The recent advancements in information technology have given organizations the ability to capture and store data in an efficient and effective manner. However, there is a widening gap between this data storage and usage of the data. Business intelligence techniques can help an organization obtain and process relevant accounting data quickly and cost efficiently. Such techniques include: query and reporting tools, online analytical processing (OLAP), statistical analysis, text mining, data mining, and visualization. Business Intelligence Techniques is a compilation of chapters written by experts in the various areas. While these chapters stand on their own, taken together they provide a comprehensive overview of how to exploit accounting data in the business environment.

Proceedings of the 2016 International Conference on Leadership, Innovation and Entrepreneurship (ICLIE) Springer

The frequent failure of IT projects in the public sector suggests that significant underlying problems remain unsolved. IT projects typically involve a substantial commitment of resources and funds; consequently, project failure can result in the loss of not just the funds invested, but also of the benefits that would have been realized by successful implementation. The delivery of IT projects on time and on budget is inadequate to measure value realization. This research analyzes five Strategic Alignment (SA) perspectives that affect organizational performance in an Australian public agency when implementing IT projects: Organization Strategy (S), Knowledge (K), Decision-making (DM), Enterprise Architecture (EA) and Public Value Plan (PVP). This book shows how public IT decision-makers can realize the benefits of IT investment by effectively employing SA perspectives in IT management.
