Freight Data Sharing Guidebook Kogan Page Publishers

This book describes how man-made litter, primarily plastic, has spread into the remotest parts of the oceans and covers all aspects of this pollution problem from the impacts on wildlife and human health to socio-economic and political issues. Marine litter is a prime threat to marine wildlife, habitats and food webs worldwide. The book illustrates how advanced technologies from deep-sea research, microbiology and mathematic modelling as well as classic beach litter counts by

volunteers contributed to the broad awareness of marine litter as a problem of global significance. The authors summarise more than five decades of marine litter research, which receives growing attention after the recent discovery of great oceanic garbage patches and the ubiquity of microscopic plastic particles in marine organisms and habitats. In 16 chapters, authors from all over the world have created a universal view on the diverse field of marine litter pollution, the biological impacts, dedicated research activities, and the various national and international legislative efforts to combat this environmental problem. They recommend future research directions necessary for a comprehensive understanding of this environmental issue and the development of efficient management strategies. This book addresses scientists, and it provides a solid knowledge base for policy makers, NGOs, and the broader public.

 Economic Survey and Budget is one of the most vital documents to do analysis and know about the state of the economy, policy framework and likelihood in times to come. All this and more makes economics, economic Survey and Budget indispensable for various competitive examinations. Our endeavour is to provide candidates with a highly enriched, actionable, usable and 'marks worthy' coverage of economic survey for aspirants with a host of tools to maximize utility and score in the examinations with enhanced learning. One of the many highlights of this volume is the summary of the Economic Survey and Union Budget. The summary is enriched with graphics and analysis in crisp and easy to understand form to decipher the voluminous document in the least possible time.

Beyond the Resource Curse John Wiley & Sons

"TRB's National Cooperative Freight Research Program (NCFRP) Report 25: Freight Data Sharing Guidebook provides a

series of guidelines for sharing freight data, primarily between public and private freight stakeholders. The report identifies barriers and motivators to successful data sharing, offers guidelines for freight data sharing, and provides two successful case study examples. The report also provides examples of data sharing agreements."--

Acronyms, Initialisms & Abbreviations Dictionary Springer

This book uses extractive industry projects in Africa to explore how political authority and the nation-state are reconfigured at the intersection of national political contestations and global, transnational capital. Instead of focusing on technological zones and the new social assemblages at the actual sites of construction or mineral extraction, the authors use extractive industry projects as a topical lens to investigate contemporary processes of state-making at the state-corporation nexus. Throughout the book, the authors seek to understand how public political actors and private actors of liberal capitalism negotiate and redefine notions and practices of sovereignty by setting legal, regulatory and fiscal standards. Rather than looking at resource governance from a normative perspective, the authors look at how these negotiations are shaped by and reshape the self-conception of various national and transnational actors, and how these jointly redefine the role of the state in managing these processes for the 'greater good'. *Extractive Industries and Changing State Dynamics in Africa* will be useful for researchers, upper-level students and policy-makers who are interested in new articulations of state-making and politics in Africa.

Bibliography of Nautical Books World Bank Publications

This book presents an analysis of the state of trade facilitation in member countries of the South Asia Subregional Economic Cooperation (SASEC) program. It includes country-level studies and identifies four common trade facilitation priorities among SASEC countries: (i) implementation of the Trade Facilitation Agreement and other international conventions; (ii) logistics and infrastructure development, and related regulatory reforms; (iii) coordinated border management; and (iv) institutions and capacity building.

The Gambia Cambridge Scholars Publishing

The aim of this book is to present a number of digital and technology solutions to real-world problems across transportation sectors and infrastructures. Nine chapters have been well prepared

and organized with the core topics as follows: -A guideline to evaluate the energy efficiency of a vehicle -A guideline to design and evaluate an electric propulsion system -Potential opportunities for intelligent transportation systems and smart cities -The importance of system control and energy-power management in transportation systems and infrastructures -Bespoke modeling tools and real-time simulation platforms for transportation system development This book will be useful to a wide range of audiences: university staff and students, engineers, and business people working in relevant fields.

Frameworks and Policy Applications in Freight and Passenger Transport Routledge

This is a study of the material life of information and its devices; of electronic waste in its physical and electronic incarnations; a cultural and material mapping of the spaces where electronics in the form of both hardware and information accumulate, break down, or are stowed away. Where other studies have addressed "digital" technology through a focus on its immateriality or virtual qualities, Gabrys traces the material, spatial, cultural and political infrastructures that enable the emergence and dissolution of these technologies. In the course of her book, she explores five interrelated "spaces" where electronics fall apart: from Silicon Valley to Nasdaq, from containers bound for China to museums and archives that preserve obsolete electronics as cultural artifacts, to the landfill as material repository. *Digital Rubbish: A Natural History of Electronics* describes the materiality of electronics from a unique perspective, examining the multiple forms of waste that electronics create as evidence of the resources, labor, and imaginaries that are bundled into these machines. Ranging across studies of media and technology, as well as environments, geography, and design, Jennifer Gabrys draws together the far-reaching material and cultural processes that enable the making and breaking of these technologies.

BIBLIOGRAPHY OF PUBLICATIONS

Taylor & Francis

This paper presents The Gambia's First Review of the Staff-Monitored Program and Request for a 39-Month Arrangement Under the Extended Credit Facility (ECF). The IMF-supported program aims to help The Gambia to be better prepared for external shocks, pursue high and inclusive growth, lessen debt vulnerabilities, strengthen public financial management,

and bolster domestic revenue mobilization. The ECF arrangement is essential to help the authorities deal with the challenges posed by the coronavirus disease 2019 pandemic. The Gambian authorities' commitment to prudent policies and institutional improvements has supported robust economic growth, while voluntary debt service deferrals from their main external creditors have helped attain debt sustainability. The authorities should remain committed to fiscal consolidation in the medium-term to ensure debt sustainability. The vulnerabilities identified in the 2019 Financial Sector Stability Assessment should be addressed to ensure soundness of the financial sector and improve legal and supervisory framework for banking supervision. The authorities should leverage the financial inclusion strategy, including through mobile banking, while strengthening the oversight of nonbanking institutions and monitoring of risks involved in mobile banking.

Naval Institute Proceedings OECD Publishing

This book contributes to the identification and systematisation of current telematics solutions applied in maritime and inland waterway transport. It represents the first time that most telematics systems currently applied in the modes of water transport have been described in detail. The volume details the massive scope of the application of telematics solutions in maritime transport, showing how it ranges from simple systems of navigation to unmanned systems which have resulted in the first attempts at launching fully autonomous vessels. The current challenges in the field involve the integration of the systems of maritime and inland waterway transport within the framework of multimodal transport operations.

SEVENTH REVIEW UNDER THE POLICY SUPPORT INSTRUMENT, REQUEST FOR A THREE-YEAR POLICY SUPPORT INSTRUMENT AND CANCELLATION OF CURRENT POLICY SUPPORT INSTRUMENT

University of Michigan Press

This handbook consists of six core chapters: (1) systems engineering fundamentals discussion, (2) the NASA program/project life cycles, (3) systems engineering processes to get from a concept to a design, (4) systems engineering processes to get from a design to a final product, (5) crosscutting management processes in systems engineering, and (6) special topics relative to systems engineering. These core

chapters are supplemented by appendices that provide outlines, examples, and further information to illustrate topics in the core chapters. The handbook makes extensive use of boxes and figures to define, refine, illustrate, and extend concepts in the core chapters without diverting the reader from the main information. The handbook provides top-level guidelines for good systems engineering practices; it is not intended in any way to be a directive.

This paper discusses Rwanda's Seventh Review Under the Policy Support Instrument (PSI), Request for a Three-Year PSI and Cancellation of Current PSI. Progress under the PSI has continued to be satisfactory. Except for the ceiling on nonconcessional borrowing (NCB), all quantitative assessment criteria were met. All indicative targets and structural benchmarks were also met. The nonobservance of the NCB ceiling came about when the authorities allowed Rwandair to contract a new US\$50.7 million external loan in July. Presently, the IMF staff recommends a waiver on the basis of the authorities' commitment to prevent any reoccurrence.

Multiple Perspectives Multimodal Transport Security Frameworks and Policy Applications in Freight and Passenger Transport

City distribution plays a key role in supporting urban lifestyles, helping to serve and retain industrial and trading activities, and contributing to the competitiveness of regional industry. This book aims to improve knowledge in this area by recognizing and evaluating the problems within the urban freight transport system.

[A Guide to Contemporary Shipping and Port Management](#) Kluwer Law International B.V.

A new approach to safety, based on systems thinking, that is more effective, less costly, and easier to use than current techniques. Engineering has experienced a technological revolution, but the basic

engineering techniques applied in safety and reliability engineering, created in a simpler, analog world, have changed very little over the years. In this groundbreaking book, Nancy Leveson proposes a new approach to safety—more suited to today's complex, sociotechnical, software-intensive world—based on modern systems thinking and systems theory. Revisiting and updating ideas pioneered by 1950s aerospace engineers in their System Safety concept, and testing her new model extensively on real-world examples, Leveson has created a new approach to safety that is more effective, less expensive, and easier to use than current techniques. Arguing that traditional models of causality are inadequate, Leveson presents a new, extended model of causation (Systems-Theoretic Accident Model and Processes, or STAMP), then shows how the new model can be used to create techniques for system safety engineering, including accident analysis, hazard analysis, system design, safety in operations, and management of safety-critical systems. She applies the new techniques to real-world events including the friendly-fire loss of a U.S. Blackhawk helicopter in the first Gulf War; the Vioxx recall; the U.S. Navy SUBSAFE program; and the bacterial contamination of a public water supply in a Canadian town. Leveson's approach is relevant even beyond safety engineering, offering techniques for “reengineering” any large sociotechnical system to improve safety and manage risk.

MIT Press

Globalisation and the rapid increase in world trade in the past decade have contributed to greater demand for international transport and logistics and, consequently, the expansion of the maritime industry. The dramatic changes in the mode of world trade and cargo transportation make it more important than ever to have a clear understanding of the way in which freight is transported by sea and the role of ports in this exchange. At the cutting edge in its assessment of the industry, *Maritime Logistics* covers the whole scope of maritime logistics and examines latest logistical developments within the port and shipping industry. With a range of new international contributors, this new edition has been thoroughly revised and updated. There are new chapters on port centric logistics, hinterland logistics and global supply chains, maritime transport and logistics as a trade facilitator, and future trends and developments. Written by a team of

international experts with over fifty years' experience in the field, *Maritime Logistics* provides a truly global perspective. The book covers everything that students of logistics, as well as those working within the industry, need to know about maritime logistics, including shipping lines, containers, tankers, dry bulk, port-centric logistics, and much more.

Regionalism in Africa Springer Nature
Rapid globalisation has led to the realization that the traditional modal approach to transporting people and goods is insufficient. Multimodal Transport Security illustrates the inevitable shift towards multimodal transportation systems, further enabled by modern technological innovations, and succinctly assesses the demanding and new security challenges that have accompanied this. The emergence of these complex transportation infrastructures has created exceedingly attractive terrorist targets owing to the potential for wide-scale disruption of global supply chains. Providing a conjoint analysis of key issues in both passenger and freight multimodal transportation security, expert contributors provide pivotal case studies highlighting the successes and failures of various policies and practices across several geographical regions. Adeptly drawing these strands together, the editors identify similarities and heterogeneities and in doing so, produce a practical illustration of the potential for further enhancement of multimodal security. An ever-increasing and worldwide concern with the improvement of security in transport places this unique and comprehensive text at the forefront of transportation literature. It will be of great value to students and scholars of public policy as well as policy makers in the fields of transportation and counter-terrorism.

GENEALOGIES, INSTITUTIONS AND TRANS-STATE NETWORKS

Edward Elgar Publishing

The automotive industry appears close to substantial change engendered by “self-driving” technologies. This technology offers the possibility of significant benefits to social welfare—saving lives; reducing crashes, congestion, fuel consumption, and pollution; increasing mobility for the disabled; and ultimately improving land use. This report is intended as a guide for state and federal policymakers on the many issues that this technology raises.
[Borders Without Barriers](#)
www.Militarybookshop.CompanyUK
This book examines the past, present and prospects of regional economic integration in Africa. The empirical analysis ranges

from unions formed during the years following independence, to the proposed African Continental Free Trade Area (AfCFTA), which aims to remove trade barriers between all 55 African states. In addition, the book explores to what extent Africa's Regional Economic Communities (RECs) have advanced in accordance with a linear integration model of goods, labor and capital markets. The book subsequently evaluates the suitability of the European model of deep integration with costly institutions for the conditions specific to Africa, considering, for example, the role of informal and non-recorded trade. Stylized cases of regional division of labour with increasing returns and imperfect competition are introduced to support the economic integration logic.

Past and current economic policies in Africa are scrutinized to answer the question: how can African regions best foster new manufacturing industries and value chains across the continent? In conclusion, the book outlines content and processes of Common Industrial Policy in the African regions. The book also addresses the controversial issue of international trade agreements between developing countries and the European Union or the USA and investigates whether these agreements impede or promote economic development in Africa. The book includes a detailed roadmap describing how to improve key clauses of agreements for economic partnership in the interest of African countries. In closing, it outlines a new vision of joint sustainable

development for Africa and Europe.

Yearbook Commercial Arbitration, Volume XLIV (2019) International Monetary Fund

Border clearance processes by customs and other agencies are among the most important and problematic links in the global supply chain. Delays and costs at the border undermine a country's competitiveness, either by taxing imported inputs with deadweight inefficiencies or by adding costs and reducing the competitiveness of exports. This book provides a practical guide to assist policy makers, administrators, and border management professionals with information and advice on how to improve border management systems, procedures, and institutions.
