The Maritime Safety Committee adopted, by resolution MSC.266(84), the Code of Safety for Special Purpose Ships, 2008 (2008 SPS Code), which had been developed following a revision of the code adopted in 1983. Both amended requirements of the SOLAS Convention and experience gained were taken into account during the development of the new code. Particular attention was paid to the matter of trainees on training ships which lead to a comprehensive revision of the term "special personnel".--Publisher's description.

International Marine Forum (OCIMF), the book is written for crew on board oil tankers, barges and terminals, but the principles can be applied to any vessel.

Condition Assessment Scheme Petrogav International

With the changes that have occurred in the Russian Federation, the tanker market has experienced an increase in the export of crude oil by large tankers from Baltic terminals impacted by the potential for winter ice navigation. This trend has continued elsewhere in the world as crude export terminals have been established or are planned in other ice navigation areas, such as the Barents Sea, White Sea and in proximity to Sakhalin Island (Eastern Russian Federation). Some sectors of the industry have been used to dealing with the more traditional high ice class, smaller tankers designed specifically for escorted or unescorted ice transit. What is relatively new to the industry is the increase in demand for larger-sized crude tankers of low, or no, ice class to trade out of an increasing number of ports subjected to first-year ice formation. Areas commonly affected by first-year ice include the Baltic Sea, White Sea, Barents Sea, the Eastern coast of Canada, Cook Inlet and in the proximity of Sakhalin Island in the Eastern Russian Federation. The guidance is primarily aimed at the use of low, or no, ice class tankers, from 50,000 tonnes deadweight upwards, likely to encounter first-year ice.
