Clive Cussler, author of over twenty consecutive New York Times bestsellers, brings back beloved hero Dirk Pitt in this electrifying, edge-of-your-seat thriller that is "a high-tech adventure, a little romance, and a whale of a story" (Richmond Times-Dispatch). Japan, 1945: Two US bombers take off with atomic bombs. Only one gets through. The Pacific, 1993: A Japanese cargo ship bound for the United States is instantly, thunderously vaporized, taking with it a Norwegian vessel. Japanese fanatics have developed a chilling plan to devastate and destroy the Western powers. From the ocean depths to the discovery of cache of lost Nazi loot, Dirk Pitt is untangling a savage conspiracy and igniting a daring counterattack. While Washington bureaucrats scramble, a brutal industrialist commands his blackmail scheme from a secret island control center. And Dirk, the dauntless hero of Sahara and Inca Gold, is taking on death-dealing robots and a human-hunting descendant of samurai warriors. Pitt alone controls the West's secret ace in the hole: a tidal wave of destruction waiting to be triggered on the ocean floor! "Bulging with gadgetry and undersea delights" (Houston Chronicle), Dragon is "pure fun...Watch out for paper cuts as you turn the pages faster and faster to keep up with Cussler's intense pace" (San Diego Union-Tribune). This is "a page-turning romp that achieves a level of fast-paced action and derring-do that Robert Ludlum...might well envy" (Publishers Weekly).

Hello, Startup CRC Press

NEW YORK TIMES BESTSELLER • More than one million copies sold! Essentialism isn't about getting more done in less time. It's about getting only the right things done. "A timely, essential read for anyone who feels overcommitted, overloaded, or overworked."—Adam Grant Have you ever: • found yourself stretched too thin? • simultaneously felt overworked and underutilized? • felt busy but not productive? • felt like your time is constantly being hijacked by other people's agendas? If you answered yes to any of these, the way out is the Way of the Essentialist. Essentialism is more than a time-management strategy or a productivity technique. It is a systematic discipline for discerning what is absolutely essential, then eliminating everything that is not, so we can make the highest possible contribution toward the things that really matter. By forcing us to apply more selective criteria for what is Essential, the disciplined pursuit of less empowers us to reclaim control of our own choices about where to spend our precious time and energy—instead of giving others the implicit permission to choose for us. Essentialism is not one more thing—it's a whole new way of doing everything. It's about doing less, but better, in every area of our lives. Essentialism is a movement whose time has come.

This inspiring book shows how the spiritual side of life, with its thoughts, feelings, and aspirations, is intimately bound up with our material technologies. From the wonder of Gothic Cathedrals, to the quiet majesty of lighter than air flight, to the ultimate in luxury of the north Atlantic steamers, Peter Hancock explores how these sequential heights of technology have enabled our dreams of being transported to new and uncharted realms to become reality. Sometimes literally, sometimes figuratively, technology has always been there to make material the visions of our imagination. This book shows how this has essentially been true for all technologies from Stonehenge to space station. But technology is far from perfect. Indeed, the author argues here that some of the most public and tragic of its failures still remain instructive, emblematic, and even inspiring. He reports on examples such as a Cathedral of the Earth (Beauvais), a Cathedral of the Seas (Titanic), and a Cathedral of the Air (Hindenburg) and tells their stories from the viewpoint of material transcendence. By interweaving their stories he reveals how technologies can succeed in elevating human beings and, in taking them to whole new realms of being, he explores and explains why these experiences are 'Transports of Delight.'

Foundations for Designing User-Centered Systems introduces the fundamental human capabilities and characteristics that influence how people use interactive technologies. Organized into four main areas—anthropometrics, behaviour, cognition and social factors—it covers basic research and considers the practical implications of that research on system design. Applying what you learn from this book will help you to design interactive systems that are more usable, more useful and more effective. The authors have deliberately developed Foundations for Designing User-Centered Systems to appeal to system designers and developers, as well as to students who are taking courses in system design and HCI. The book reflects the authors' backgrounds in computer science, cognitive science, psychology and human factors. The material in the book is based on their collective experience which adds up to almost 90 years of working in academia and both with, and within, industry; covering domains that include aviation, consumer Internet, defense, eCommerce, enterprise system design, health care, and industrial process control.

The Atomic Chef

The Los Cabos story all started back in 1999 when we decided to move to Tulsa, Oklahoma and open a quick-service restaurant called Atomic Burrito. The chance to put your own thumbprint on

a restaurant is a scary yet exciting time. We had seen other Mexican food quick-service restaurants around the country and thought they had something, but had not really done it all the way. We made a promise to ourselves that we would use only the highest quality products. We researched fajita steak and chicken marinade recipes. We took each and every recipe and made them over and over again until we felt it was the best in town. I remember making the chili con carne, one of the most important sauces, at least 15 times until we felt it was a home run. That was our dedication to quality. The guest immediately flocked in because of high quality food and reasonable prices. This concept became the foundation for what is now the most decorated Mexican restaurant in the state of Oklahoma. Chef Jimmy Blacketer did not go to culinary school to learn his skills. Although he did attend the University of Oklahoma while studying communications degree, he learned everything by rolling up his sleeves and spending hundreds of days in the kitchen. He was very blessed by the opportunity to spend time with a group of Hispanic employees that started with him day one at Atomic Burrito and still remain today as loyal employees (family!). Adela, Ernesto Gonzales, Willy Gonzales and Estella, have all made contributions to our concept. Adela is our head prep associate and has been my \Mexican food mother\ since 1999. We have both worked tirelessly developing these recipes. Enjoy.

A searing expose of the restaurant industry, and a path to a better, safer, happier meal. In 2019, the restaurant business was booming. Americans spent more than half of their annual food budgets dining out. In a generation, chefs had gone from behind-the-scenes laborers to TV stars. The arrival of Seamless, DoorDash, and other meal delivery apps was overtaking home cooking. Beneath all that growth lurked serious problems. Many of the best restaurants in the world employed unpaid cooks. Meal delivery apps were putting many restaurants out of business. And all that dining out meant dramatically less healthy diets. The industry may have been booming, but it also desperately needed to change. And, then, along came COVID-19. From the farm to the curbside pickup parking spot, everything about the restaurant business is changing, for better or worse. *The Next Supper* tells this story, and offers clear and essential advice for what and how to eat to ensure the well-being of cooks and waitstaff, not to mention our bodies and the environment. *The Next Supper* reminds us that breaking bread is an essential human activity, and charts a path to preserving the joy of food in a turbulent era. *Handbook of Human Factors and Ergonomics* IGI Global 120+ recipes for the unfussy dishes—from all-day eggs to 2 a.m. snacks—that the James Beard Award-winning, three-Michelin-starred chef of Manresa cooks at home. “An instant classic, it defines California cool and wears its sophistication lightly.”—Padma Lakshmi When David Kinch isn't working at one of his restaurants, he cooks in his strawberry-colored bungalow—affectionately known as the Pink Palace—where he lives on the Northern California coast. A casual meal might include a rustic pasta made with cans from the pantry, a simple roasted chicken, or too many oysters to count. In *At Home in the Kitchen*, you'll find David's ready-for-anything Mother-Sauce Mayo, a revelatory Guacamole with Pomegranate, the best make-ahead Grilled Cheese, and everything you want to eat for dinner tonight: Onion & Brioche Soup, Brussels Sprouts with Cider & Goat Cheese, Penne with a Walnut Sauce, Jambalaya New Orleans Style, Oven-Roasted Potatoes with Cod, Whole Roast Cauliflower with Capers & Egg, and much more. Photographed on location in the coastal town of Santa Cruz, where David surfs, sails, and entertains, this laid-back cookbook is packed with go-to recipes, songs to listen to while cooking, and a few classic cocktails (rum punch, daiquiris, sangria, margaritas!) to set a cheerful mood. And while each recipe has no more than a few key ingredients, David's clever techniques, subtle twists, and fresh flavor combinations guarantee delicious—and impressive!—results in no time at all.

Teaching Professional and Technical Communication guides new instructors in teaching professional and technical communication (PTC). The essays in this volume provide theoretical and applied discussions about the teaching of this diverse subject, including relevant pedagogical approaches, how to apply practical aspects of PTC theory, and how to design assignments. This practicum features chapters by prominent PTC scholars and teachers on rhetoric, style, ethics, design, usability, genre, and other central concerns of PTC programs. Each chapter includes a scenario or personal narrative of teaching a particular topic, provides a theoretical basis for interpreting the narrative, illustrates the practical aspects of the approach, describes relevant assignments, and presents a list of questions to prompt pedagogical discussions. *Teaching Professional and Technical Communication* is not a compendium of best practices but instead offers a practical collection of rich, detailed narratives that show inexperienced PTC instructors how to work most effectively in the classroom. Human Factors in Practice: Concepts and Applications is written for the practitioner who wishes to learn about human factors (HF) but is more interested in application (applied research) than theory (basic research). Each chapter discusses the application of important human factors theories, principles and concepts, presented at a level that can be easily understood by layman readers with no prior knowledge or formal education in human factors. The book illustrates to the non-HF practitioner the many varied domains in which human factors has been applied as well as serving to showcase current research in these areas. All chapters address the common overarching theme of applying human factors theories, principles and concepts to address real-world problems, and follow a similar structure to ensure consistency across chapters. Standard sections within each chapter include a discussion of the scientific underpinnings, a description of relevant HF methods and guidance on sources of further information, case studies to illustrate application, and a summary of likely future trends. Each chapter concludes with a short list of key terms and definitions to enhance the reader's understanding of the content. Featuring specialist contributors from a variety of disciplines and cultural backgrounds, the book represents a diverse range of perspectives on human factors and will appeal to a broad international audience. It is consciously not a classroom textbook but rather intended to be read at the workplace by non-HF practitioners, and written specifically with their needs in mind. Reading this book will give all practitioners a solid grounding in modern human factors and its application in

real-world situations.

Every year at the U.S. Frontiers of Engineering Symposium, 100 of this country's best and brightest engineers, ages 30 to 45, have an opportunity to learn from their peers about pioneering work being done in many areas of engineering. The symposium gives early career engineers working in academia, industry, and government in many different engineering disciplines an opportunity to make contacts with and learn from individuals they would not meet in the usual round of professional meetings. This networking may lead to collaborative work and facilitate the transfer of new techniques and approaches. It is hoped that the exchange of information on current developments in many fields of engineering will lead to insights that may be applicable in specific disciplines and thereby build U.S. innovative capacity. Different topics are covered each year, and, with a few exceptions, different individuals participate. The four general topics covered at the 2008 meeting were: drug delivery systems, emerging nanoelectronic devices, cognitive engineering, and countering the proliferation of weapons of mass destruction. The intent of this book is to convey the excitement of this unique meeting and to highlight cutting-edge developments in engineering research and technical work.

It takes a guilty bastard to make a justified bitch. When a severed finger shows up on her doorstep in a seedy section of Las Vegas, Helen Taylor does not freak out. She's already crazy, as evidenced by her junk-stuffed house and its ever-growing population of cats. There's also Bobby, her long-dead husband. Helen talks to him regularly, and Bobby talks back. The finger and the brutal murder it reveals are more than a hoarding cat lady with a phantom husband can ignore. Helen's a suspect, and she ends up in jail. Summoned by the detective on the case, Helen's sister Pat arrives from Phoenix with two teen-age boys in tow. While Helen is AWOL from a mental facility, another gruesome murder is discovered. Why Darwin Matters Pocket Books

Technology is our conduit of power. In our modern world, technology is the gatekeeper deciding who shall have and who shall have not. Either technology works for you or you work for technology. It shapes the human race just as much as we shape it. But where is this symbiosis going? Who provides the directions, the intentions, the goals of this human-machine partnership? Such decisions do not derive from the creators of technology who are enmeshed in their individual innovations. They neither come from our social leaders who possess only sufficient technical understanding to react to innovations, not to anticipate or direct their progress. Neither is there evidence of some omnipotent 'invisible hand,' the simple fact is that no one is directing this enterprise. In *Mind, Machine and Morality*, Peter Hancock asks questions about this insensate progress and has the temerity to suggest some cognate answers. He argues for the unbreakable symbiosis of purpose and process, and examines the dangerous possibilities that emerge when science and purpose meet. Historically, this work is a modern-day child of Bacon's hope for the 'Great Instauration.' However, unlike its forebear, the focus here is on human-machine systems. The emphasis centers on the conception that the active, extensive face of modern philosophy is technology. Whatever we are to become is bound up not only in our biology but critically in our technology also. And to achieve rational progress we need to articulate manifest purpose. This book is one step along the purposive road. Drawing together his many seminal writings on human-machine interaction and adapting these works specifically for this collection, Peter Hancock provides real food for thought, delighting readers with his unique philosophical perspective and outstanding insights. This is theoretical work of the highest order and will open minds accordingly.
