"The Grand Inquisitor" is a parable in Fyodor Dostoyevsky's novel The Brothers Karamazov (1879-1880). It is told by Ivan, who questions the possibility of a personal and benevolent God, to his brother Alyosha, a novice monk. The Grand Inquisitor is an important part of the novel and one of the best-known passages in modern literature because of its ideas about human nature and freedom, and its fundamental ambiguity. Scholars cite Friedrich Schiller's play Don Carlos as a major inspiration for Dostoyevsky's Grand Inquisitor. However, it is also said that "The sources of the legend are extraordinarily varied and complex."

La vida del primer hombre que pisó la Luna y la historia del hito que marcó la humanidad y la carrera espacial. Próximamente se estrenará la película 'First Man' Cuando el Apolo 11 aterrizó en la Luna en 1969, el primer hombre en dejar su huella en la superficie se convirtió en leyenda. Basado en material exclusivo compuesto por más de cincuenta horas de grabaciones privadas con Neil

Armstrong, documentos personales y entrevistas con familiares cercanos, James Hansen logra una magnífica panorámica de la segunda mitad del siglo XX además de elaborar una biografía inigualable sobre uno de los protagonistas incontestables de la historia reciente. En una penetrante exploración del culto al héroe estadounidense, Hansen aborda el complejo legado del Primer Hombre, como astronauta y como individuo. En este libro, la intimidad, la ciencia y la épica se entremezclan para formar el retrato de un héroe rebelde que siempre será conocido como el viajero espacial más famoso de la historia. ENGLISH DESCRIPTION Soon to be a major motion picture, this is the first—and only—definitive authorized account of Neil Armstrong, the man whose “one small step” changed history. When Apollo 11 touched down on the Moon’s surface in 1969, the first man on the Moon became a legend. In *First Man*, author James R. Hansen explores the life of Neil Armstrong. Based on over fifty hours of interviews with the intensely private Armstrong, who also gave Hansen exclusive access to private documents and family sources, this “magnificent panorama of the second half of the American twentieth century” (Publishers Weekly, starred review) is an unparalleled biography of an American icon. In this “compelling and nuanced portrait” (Chicago Tribune) filled with revelations, Hansen vividly recreates Armstrong’s career in flying, from his seventy-eight combat missions as a naval aviator flying over North Korea to his formative trans-atmospheric flights in the rocket-powered X-15 to his piloting Gemini VIII to the first-ever docking in space. For a pilot who cared more about flying to the Moon than he did about walking on it, Hansen asserts, Armstrong’s storied vocation exacted a dear personal toll, paid in kind by his wife and children. For the near-fifty years since the Moon landing, rumors have swirled around Armstrong concerning his dreams of space travel, his religious beliefs, and his private life. A penetrating exploration of American hero worship, Hansen addresses the complex legacy of the First Man, as an astronaut and as an individual. “*First Man* burrows deep into Armstrong’s past and present...What emerges is an earnest and brave man” (Houston Chronicle) who will forever be known as history’s most famous space traveler.

While this is not a part of the *Arabian Nights*, these tales written by Washington Irving describe the Moors and the part they played in Spain. Alice in Wonderland "O'Reilly Media, Inc."

“To be up on stage, shoving food in your face, beats everyday existence for most people.” —David “Coondog” O’Karma, competitive eater “Hungry” Charles Hardy. Ed “Cookie” Jarvis. Sonya “The Black Widow” Thomas. Joey “Jaws” Chestnut. Will such names one day be looked back upon as the pioneers of a new manifestation of the irrepressible American appetite for competition, money, fame, and self-transformation? They will if the promoters of the newly emerging sport of competitive eating have their way. In *Horsemen of the Esophagus*, Jason Fagone reports on the year he spent in the belly of this awakening beast. Fagone’s trek takes him to 27 eating contests on two continents, from the World Grilled Cheese Eating Championship in Venice Beach, California, to Nagoya, Japan, where he pursues an interview with the legendary Takeru Kobayashi, perhaps the most prodigious eater in the world today, and to the Nathan’s Famous Hot Dog Eating Contest at Coney Island, the sport’s annual grand finale, where Kobayashi has eaten more than 50 dogs in 12 minutes. Along the way, Fagone discovers an absurd, sometimes troubling subculture on the make, ready to bust out of its county fair and neighborhood-fat-guys niche and grab a juicy piece of the big-time television

sports/Vegas spectacle jackpot. Fagone meets promoters like George Shea, the P. T. Barnum of the International Federation of Competitive Eating (aka IFOCE, “the governing body of all stomach-centric sport”) and enters the lives of three “gurgitators”: David “Coondog” O’Karma, a fiftyish, six-two house painter from Ohio who’s “not ready to become invisible”; Bill “El Wingador” Simmons, the Philly Wing Bowl legend who is shooting for a fifth chicken-eating championship despite the fact that it may be killing him; and Tim “Eater X” Janus, a lean young Wall Street trader who takes a seriously scientific and athletic approach to the pursuit of ingesting mountains of food in record-breaking times. Each in his own way feels as if he has lost or not yet found something essential in life, and each is driven by the desperate hope that through consumption he may yet find redemption, that even in the junkiest of America’s junk culture, true nourishment might be found. After all, as it says on the official IFOCE seal: In Voro Veritas (In Gorging, Truth). With forays into the gastrointestinal mechanics of the alimentary canal (“it’s what unbuilds the world to build you,” but, hey, you can skip that part if you like), the techniques and tricks of the experienced gurgitators (pouring a little club soda on top of high-carb foods makes them easier to swallow), and the historical roots of the competitive eating phenomenon, *Horsemen of the Esophagus* gives the French something else to dislike about America. And it gives the rest of us food for thought about the bizarre and unlikely places the American Dream can sometimes lead. Also available as an eBook

TODOS QUIEREN A DAISY JONES / DAISY JONES & THE SIX

Fernando Barrenechea

The fundamental mathematical tools needed to understand machine learning include linear algebra, analytic geometry, matrix decompositions, vector calculus, optimization, probability and statistics. These topics are traditionally taught in disparate courses, making it hard for data science or computer science students, or professionals, to efficiently learn the mathematics. This self-contained textbook bridges the gap between mathematical and machine learning texts, introducing the mathematical concepts with a minimum of prerequisites. It uses these concepts to derive four central machine learning methods: linear regression, principal component analysis, Gaussian mixture models and support vector machines. For students and others with a mathematical background, these derivations provide a starting point to machine learning texts. For those learning the mathematics for the first time, the methods help build intuition and practical experience with applying mathematical concepts. Every chapter includes worked examples and exercises to test understanding. Programming tutorials are offered on the book's web site.

Statistical methods are a key part of data science, yet very few data scientists have any formal statistics training. Courses and books on basic statistics rarely cover the topic from a data science perspective. This practical guide explains how to apply various statistical methods to data science, tells you how to avoid their misuse, and gives you advice on what's important and what's not. Many

data science resources incorporate statistical methods but lack a deeper statistical perspective. If you're familiar with the R programming language, and have some exposure to statistics, this quick reference bridges the gap in an accessible, readable format. With this book, you'll learn: Why exploratory data analysis is a key preliminary step in data science How random sampling can reduce bias and yield a higher quality dataset, even with big data How the principles of experimental design yield definitive answers to questions How to use regression to estimate outcomes and detect anomalies Key classification techniques for predicting which categories a record belongs to Statistical machine learning methods that “learn” from data Unsupervised learning methods for extracting meaning from unlabeled data
