Recent years have seen rapid strides in the level of sophistication of VLSI circuits. On the performance front, there is a vital need for techniques to design fast, low-power chips with minimum area for increasingly complex systems, while on the economic side there is the vastly increased pressure of time-to-market. These pressures have made the use of CAD tools mandatory in designing complex systems. Timing Analysis and Optimization of Sequential Circuits describes CAD algorithms for analyzing and optimizing the timing behavior of sequential circuits with special reference to performance parameters such as power and area. A unified approach to performance analysis and optimization of sequential circuits is presented. The state of the art in timing analysis and optimization techniques is described for circuits using edge-triggered or level-sensitive memory elements. Specific emphasis is placed on two

methods that are true sequential timing optimizations techniques: retiming and clock skew optimization. Timing Analysis and Optimization of Sequential Circuits covers the following topics: Algorithms for sequential timing analysis Fast algorithms for clock skew optimization and their applications Efficient techniques for retiming large sequential circuits Coupling sequential and combinational optimizations. Timing Analysis and Optimization of Sequential Circuits is written for graduate students, researchers and professionals in the area of CAD for VLSI and VLSI circuit design. Industrial Engineering North Holland Through Angela's Eye is the untold, inside story of Operation Firewall." After a series of unfortunate changes in circumstances, my life took an unwelcomed turn. What started out as my personal battle against those terrorizing me by stealing my identity through my personal computer turned into the

largest case of identity theft in United States history! Not only did the computer hackers cause me financial distress, but they threatened my life! Not only did I get mad, but now I was determined to get justice. Little did I realize that my journey would lead to the exposing of corruption within our own government up to the vice president and president of the US and continued right up to the UN! Once the first domino fell, a series of events began to unfold. Operation Firewall began in July 2003 as an investigation into access device fraud before expanding into an investigation of global credit card fraud and identity theft. This case led to the inception of many laws being placed on the books to prosecute those who were perpetuating the crimes. The removal of spyware, malware, and malicious web sites that were trafficking in stolen identities, spam, hacking and even pornography are some of the positive results. My account of "Operation Firewall" will make Watergate look like child's play. It has led to over 4,000 cases and well over 64,000 arrests as of December 2005. The

ramifications of this case will go on for years to come. As a result of the investigation, over \$260 billion per year is being saved by taking these criminals off the streets. It was a war that was fought without weapons but used computers coupled with a woman's intuition and common sense! Here is the inside story of "Operation Firewall," case number SSC_2003R01260 as told by someone who is seeking Divine Justice.

 “[A] remarkable journey.”—The Telegraph
 The incredible life story of legendary cardiac surgeon and scientist

Magdi Yacoub, an outsider who succeeded against the odds Veteran journalists Simon Pearson and Fiona Gorman follow the remarkable life of heart surgeon Magdi Yacoub from his formative years in Egypt, through spectacular success at Cairo University, to his long and distinguished career in Britain. Although at times he clashed with the medical establishment in London, Yacoub pioneered great advances in heart surgery. He was knighted in 1992, and in 2014, he was awarded the highest honor in the gift of the Queen, the Order of Merit. Written with unprecedented access and drawing on extensive interviews and research, the biography recounts how Yacoub transformed the treatment of children with congenital heart disease. He performed some of the first heart transplants in Britain and the first heart-lung transplants in Europe. At London’s Harefield Hospital, he created the greatest heart transplant center in the world. Among his patients are men and women who are still thriving more than thirty-five years after he gave them new hope. This story is also about science, the development

of new medical techniques, and a deeper understanding of how the human body works.

Today, at an age when most people have long since retired, Yacoub is still pushing the boundaries of scientific understanding and surgical know-how. He is also taking heart surgery to places that until now have had little access to cardiac treatment, developing centers of excellence across Africa, including in Egypt, where his hospital in Aswan has an international reputation, and a new center is rising in Cairo. Yacoub’s life is one of triumph and tragedy, success and failure, fierce criticism and high praise—it is also an enthralling journey through the worlds of scientific research and medical politics and ethics at the highest levels.
