Web Search Engine
Research Cengage
Learning

In this innovative book,
Celia Lury argues that
the time has come for
us to explore the world
not only with new
methods, but with a
new approach to
methodology itself.
Fundamental changes
are taking place in how
we produce
knowledge, how we

communicate it and,
indeed, what we
consider to be
knowledge. These
changes demand
innovative and creative
responses to research
questions. Lury's
rethinking of the
nature of social inquiry
starts by
reconceptualizing the
'problem space'.
Problems are not static
or a 'given'; rather,
they are created and
continually
recomposed as part of
the methodological

process itself. Following the line of thought that methods are practices that articulate as much as capture a social problem, Lury further develops the notion of compositional methodology to think through its implications. With remarkable fluency, the book draws into conversation a range of hot-button issues, both longstanding and novel, from observation, reflexivity, recursive measurement and feminist methodologies, to participation, context, datafication and platformization. Always with an eye to the methodological potential of new trends, the book provides a strong challenge to much

received wisdom and argues that a combination of techniques can contribute to better understanding of the problem spaces we all inhabit.

Computerworld IGI

Computers are complex machines. They handle many of our daily tasks quickly and easily, and we sometimes take their incredible abilities for granted. When something goes wrong with our computer, it might seem like the end of the world, how will anything get done now? This book introduces readers to common problems they may encounter with various hardware components of their computer system. Students will learn how to diagnose hardware

problems and solve them on their own.

Century Lexington Books

Up relevance scores, improve page speed, optimize voice search questions, and more! Search Engine Optimization For Dummies shows website owners, developers, and search engine optimizers (SEOs) how to create a website that ranks at the top of search engines and has high-volume traffic, while answering the essential question of "how do I get people to visit my site?" By understanding search engine basics (what are they, which ones are important, how to get started), building a search engine-friendly

site, registering your site with directories and indexes, using analysis tools to track results and link popularity to boost rankings, and advertising your site by using pay-per-click options, you can use the tricks of SEO masters to drive traffic to your site. You'll also discover how to write effective content, use social media to boost your profile, and manage your platform and reputation to positively impact your search engine rankings. Develop a search strategy and use new SERP features Maximize the effects of personalized search Analyze results with improved analytics tools Optimize voice search strategies There's no time like the present to create a

website that ranks at the top of search engines and drives traffic to your site with these tips, tricks, and secrets.

The Analysis and Design of Linear Circuits, 8th Edition provides an introduction to the analysis, design, and evaluation of electric circuits, focusing on developing the learners design intuition. The text emphasizes the use of computers to assist in design and evaluation. Early introduction to circuit design motivates the student to create circuit solutions and optimize designs based on real-world constraints. This text is an unbound,

three hole punched version.

This book constitutes the thoroughly refereed post-workshop proceedings of the First WICI International Workshop on Web Intelligence meets Brain Informatics, WImBI 2006, which was held in Beijing, China, in December 2006. The workshop explores a new perspective of Web Intelligence (WI) research from the viewpoint of Brain

Informatics (BI). The 26 revised full-length papers presented together with three introductory lectures have been carefully reviewed and selected.

LEADERSHIP AND CHANGE MANAGEMENT

John Wiley & Sons
The Web is a global information space consisting of linked documents and linked data. As the Web continues to grow and new technologies, modes of interaction, and applications are being developed, the task of the Semantic Web is to unlock the power of information available on the Web into a common semantic information space and to make it available for sharing and processing by automated tools as

well as by people. Right now, the publication of large datasets on the Web, the opening of data access interfaces, and the encoding of the semantics of the data extend the current human-centric Web. Now, the Semantic Web community is tackling the challenges of how to create and manage Semantic Web content, how to make Semantic Web applications robust and scalable, and how to organize and integrate information from different sources for novel uses. To foster the exchange of ideas and collaboration, the International Semantic Web Conference brings together researchers and practitioners in relevant disciplines such as artificial intelligence,

databases, social networks, distributed computing, Web engineering, information systems, natural language processing, soft computing, and human-computer interaction. This volume contains the main proceedings of ISWC 2008, which we are - cited to o?er to the growing community of researchers and practitioners of the Semantic Web. We got a tremendous response to our call for research papers from a truly international community of researchers and practitioners from 41 countries submitting 261 papers. Each paper received an average of 3.

The first encyclopedia in the field, the International Encyclopedia of Ergonomics and Human Factors provides a comprehensive and authoritative compendium of current knowledge on ergonomics and human factors. It gives specific information on concepts and tools unique to ergonomics. About 500 entries, published in three volumes and on CD-ROM, are pre

BUYING YOUR WAY TO THE TOP TO INCREASE SALES

Springer Science & Business Media
This book constitutes the refereed proceedings of the 5th Asia-Pacific Web Conference, APWeb 2003, held in Xian,

China in April 2003. The 39 revised full papers and 16 short papers presented together with two invited papers were carefully reviewed and selected from a total of 136 submissions. The papers are organized in topical sections on XML and database design; efficient XML data management; XML transformation; Web mining; Web clustering, ranking, and profiling; payment and security; Web application architectures; advanced applications; Web multimedia; network protocols; workflow management systems; advanced search; and data allocation and replication.

Information Design

Pearson Education

An organization that is

established as an instrument or means for achieving defined objectives has been referred to as a formal organizations. Its design specifies, how goals are subdivided and reflected in subdivisions of the organization. Divisions, departments, sections, positions, jobs, and tasks make up this work structure. Thus, the formal organization is expected to behave impersonally in regard to relationship with clients or with its members. Change Management provides readers with frameworks for applying different models of change to different scenarios, offers proactive approaches to change that relate to business performance and gives practical, step-by-step

guidance on handling change. The reference book covers a breadth of leadership and change management topics. It draws upon an extensive review of relevant change management literature in order to encourage a critical perspective, as well as a deeper understanding of this important subject area. This book offers the reader answers to questions including why change management tends to fail and why individuals are neglected in traditional accounts of change management. The present book has been written in a lucid style that a layman may understand it easily. The book has been written after a detailed study of concepts and assumptions of several

leadership and change management styles in modern business world.

Marketing Through

Search Optimization,

Second Edition, is the

step-by-step

marketer's guide to

improving your web

ranking in search

engines and getting

your site listed

effectively in online

directories. Search

engine placement has

become a key task for

those engaged in

website marketing

because good

positioning in search engines and directories dramatically increases visitor traffic.

Optimizing search engine ranking will be the most important and cost-effective way of marketing your website, and customers use search engines more than any other method to locate websites. Submitting to search engines is only part of the challenge. It is also vital to prepare a website through "search engine optimization," ensuring that your web pages are accessible and focused in ways that drive traffic to your site.

Problem Spaces

Pearson Education
India

Just like the industrial society of the last century depended on natural resources,

today's society depends on information and its exchange. Staab and Stuckenschmidt structured the selected contributions into four parts: Part I, "Data Storage and Access", prepares the semantic foundation, i.e. data modelling and querying in a flexible and yet scalable manner. These foundations allow for dealing with the organization of information at the individual peers. Part II, "Querying the Network", considers the routing of queries, as well as continuous queries and personalized queries under the conditions of the permanently changing topological structure of a peer-to-peer network. Part III, "Semantic Integration", deals with the mapping

of heterogeneous data representations. Finally Part IV, "Methodology and Systems", reports experiences from case studies and sample applications. The overall result is a state-of-the-art description of the potential of Semantic Web and peer-to-peer technologies for information sharing and knowledge management when applied jointly.

Make the Sale, Deliver the Service, Build the Brand John Wiley & Sons

This book covers the basics of PHP and MySQL along with introductions to advanced topics including object-oriented programming and how to build Web sites that incorporate authentication and security. After you

complete this course, you will be able to use PHP and MySQL to build professional quality, database-driven Web sites.

SQL Performance

Explained Springer

Mining the Web: Discovering Knowledge from Hypertext Data is the first book devoted entirely to techniques for producing knowledge from the vast body of unstructured Web data. Building on an initial survey of infrastructural issues—including Web crawling and indexing—Chakrabarti examines low-level machine learning

techniques as they relate specifically to the challenges of Web mining. He then devotes the final part of the book to applications that unite infrastructure and analysis to bring machine learning to bear on systematically acquired and stored data. Here the focus is on results: the strengths and weaknesses of these applications, along with their potential as foundations for further progress. From Chakrabarti's work—painstaking, critical, and forward-looking—readers will gain the theoretical and practical understanding they need to contribute to the Web mining effort. * A comprehensive, critical exploration of statistics-based

attempts to make sense of Web Mining. * Details the special challenges associated with analyzing unstructured and semi-structured data. * Looks at how classical Information Retrieval techniques have been modified for use with Web data. * Focuses on today's dominant learning methods: clustering and classification, hyperlink analysis, and supervised and semi-supervised learning. * Analyzes current applications for resource discovery and social network analysis. * An excellent way to introduce students to especially vital applications of data mining and machine learning technology.

 This concise volume presents key concepts and entries from the twelve-volume ICA International Encyclopedia of Communication (2008), condensing leading scholarship into a practical and valuable single volume. Based on the definitive twelve-volume IEC, this new concise edition presents key concepts and the most relevant headwords of communication science in an A-Z format in an up-to-date manner. Jointly published with the International Communication Association (ICA), the leading academic association of the discipline in the world. Represents the best and most up-to-date international research in this dynamic and

interdisciplinary field. Contributions come from hundreds of authors who represent excellence in their respective fields. An affordable volume available in print or online.

HOW PEOPLE SEARCH AND HOW TO BE FOUND ON THE WEB

Marketing Through Search Optimization
 How People Search and how to be Found on the Web
 On the Internet, if you're not read, you're dead. Written by an internationally-acclaimed specialist in this field, Killer Web Content gives you the strategies and practical techniques you need to get the very best out of your Web content. Accessible, concise and

practical, it will make your website really work for you. This book helps readers to: - provide visitors to their website with the right content at just the right time - write compelling Web content that users really respond to and want more of - make sure their website has the best possible chance of getting into the first page of search results - understand the benefits of blogs, RSS, and e-mail newsletters Web content is an increasingly important asset. It helps sell products and deliver services. From travel companies to software companies, from universities to governments, it's something that has to be got right.

MARKETING THROUGH SEARCH OPTIMIZATION

CRC Press

We are pleased to present the proceedings of the 2003 Atlantic Web Intelligence Conference, AWIC 2003. The conference was located in Madrid, Spain during May 5-6, 2003, organized locally by the Technical University of Madrid. AWIC 2003 aimed to be the first of a series of conferences on Web Intelligence, to be celebrated annually, alternatively in Europe and America, starting in Madrid. It was born as an activity of the recently created WIC-Poland Research Centre and the WIC-Spain Research Centre, both belonging to the Web Intelligence Consortium

m(WIC) (<http://wi-consortium.org>). AWIC 2003 was supported with grants from the S- nish Ministry for Science and Technology and the European Network of Excellence in Knowledge Discovery, KDNNet. AWIC 2003 brought together scientists, engineers, computer users, and students to exchange and share their experiences, new ideas, and research results about all aspects (theory, applications, and tools) of artificial intelligence techniques applied to Web-

based systems, and to discuss the practical challenges encountered and the solutions adopted. Almost 70 contributions were submitted. After a preliminary evaluation, 60 of these papers were accepted to the conference and were assigned at least two reviewers from the international program committee. Out of this 60, 33 were conditionally accepted, and 32 of them were nally accepted after the conditions set by the reviewers had been met, which resulted in an acceptance ratio of 45%.
