This new edition of the popular and market-leading *Diabetes in Old Age* features up-to-date and comprehensive information about the key aspects of managing older people with diabetes, predominantly type 2 diabetes. With a strong evidence-based focus throughout, the entire range of issues surrounding diabetes and its many complications are covered, each with a clear focus on how they relate directly to the older patient. Varying approaches to optimizing diabetes care in the community, primary care and secondary care health care arenas are presented, and the importance of comprehensive functional assessment is emphasized. Coverage of areas unique to an ageing population of older people with diabetes such as falls management, frailty

and sarcopenia, and cognitive dysfunction form a key cornerstone of the book. In every chapter, best practice points and key learning outcomes are provided, as well as published evidence bases for each major conclusion. *Diabetes in Old Age*, 4th edition is essential reading for diabetologists and endocrinologists, diabetes specialist nurses, primary care physicians, general physicians and geriatricians, podiatrists and dieticians with an interest in diabetes, as well as all health professionals engaged in the delivery of diabetes care to older people. *Physiology of Love and Other Writings* Cambridge University Press

This text emphasizes the human immune system and presents concepts with a balanced level of detail to describe how the immune system works. Written for undergraduate, medical, veterinary, dental, and pharmacy students, it makes generous use of medical examples to illustrate points. This classroom-proven textbook offers clear writing, full-color illustrations, and section and chapter

summaries that make the content accessible and easily understandable to students.

This collection of tales opens up a magical world far from our customary haunts. Ghost stories, romances, fables, and heroic sagas: the forms are familiar, but the characters we meet surprise us at

every turn. For those who know and love the tales of the Grimms and Andersen, the universal themes of fairy tale literature emerge in these classic stories, but with a sophistication that is uniquely Chinese and altogether entrancing. Physician, anthropologist, travel writer, novelist, politician, Paolo Mantegazza (1831-1910) was probably the most eclectic figure in late-nineteenth century Italian culture. A prolific writer, Mantegazza can be seen as a forerunner of what has come to be known as cultural studies on account of his interdisciplinary approach, his passionate blend of scientific and literary elements in his writings, and his ability to transcend the boundaries between 'high' and 'low' culture. Though extremely popular during his lifetime both in Italy and abroad, Mantegazza's works have not been made available in a significant English language compilation. This volume is a representative overview of Mantegazza's key works, many of them translated into English for the first time. In addition to the unabridged *Physiology of Love* (1873), a veritable best-seller at the time of its initial publication, this compilation features selections from Mantegazza's writings on medicine, his travelogues, his epistolary novel *One Day in Madeira* (1868), and his treatise on materialistic aesthetics. Replete with an extensive and informative introduction by the editor, *The Physiology of Love and Other Writings* also excerpts Mantegazza's works of science fiction, memoir, and social and cultural criticism. As an anthology of the works of Paolo Mantegazza, a writer of diverse topical orientations, this volume is also an account of the circulation of ideas and cross-fertilization of disciplines that defined a crucial period of Italian and European cultural life.

This book, published in cooperation with ESSKA, is an exceptionally comprehensive guide to arthroscopy that covers all major joints and all potential arthroscopic procedures. Sections on the knee, shoulder, elbow, hip, wrist, and ankle provide in-depth descriptions of each procedure, including indications, technique, complications, and results, as well as essential information on diagnostic work-up and classification systems/rating scales. The text is supported by a wealth of color illustrations, and clear treatment algorithms are included for most sports injuries. An introductory section describes

the history of arthroscopy, explains general principles, and provides information on instrumentation, electronic equipment, anesthesia, pain control, and prevention of complications. A special chapter focuses on the operative report, with description of an electronic form that can be used by every surgeon to store operative records or participate in European multicenter ESSKA studies. The authors include the most renowned arthroscopic surgeons in Europe. Arthroscopy will be an invaluable textbook and reference for orthopaedic surgeons, general orthopaedic physicians, sports traumatologists, residents, and physical therapists.

The HLA FactsBook presents up-to-date and comprehensive information on the HLA genes in a manner that is accessible to both beginner and expert alike. The focus of the book is on the polymorphic HLA genes (HLA-A, B, C, DP, DQ, and DR) that are typed for in clinical HLA laboratories. Each gene has a dedicated section in which individual entries describe the structure, functions, and population distribution of groups of related allotypes. Fourteen introductory chapters provide a beginner's guide to the basic structure, function, and genetics of the HLA genes, as well as to the nomenclature and methods used for HLA typing. This book will be an invaluable reference for researchers studying the human immune response, for clinicians and laboratory personnel involved in clinical and forensic HLA typing, and for human geneticists, population biologists, and evolutionary biologists interested in HLA genes as markers of human diversity. Introductory chapters provide good general overview of HLA field for novice immunologists and geneticists Up-to-date, complete listing of HLA alleles Invaluable reference resource for immunologists, geneticists, and cell biologists Combines both structural and functional information, which has never been compiled in a single reference book previously Serological specificity of allotypes Identity of material sequenced including ethnic origin Database accession

The Immune System F.A. Davis

A clinically relevant introduction focusing on those microbes that cause disease in humans. Following basic principles, basic concepts in the immune response, and general principles of laboratory diagnosis, sections cover bacteriology, virology, mycology and parasitology. Chapters in these sections begin with etiology, then discuss epidemiology, host defenses, identification, diagnosis, prevention, and control. Expanded information on immunology and a new chapter on arthropods are included. Annotation copyrighted by Book News, Inc., Portland, OR

The second edition of a guide, which introduced a simple, yet highly effective method for the relief of cancer pain. Thoroughly revised and updated, the new edition further refines the WHO method, which advocates the use of a small number of relatively inexpensive drugs, including morphine. Revisions draw on experiences with millions of patients around the world as well as new knowledge about the specific pain syndromes unique to cancer. Completely new are chapters describing the international system by which morphine and other opioids are made available for medical purposes. The book has two parts. Part one provides a practical guide to the relief of cancer pain, concentrating on drug treatment as the mainstay of pain management. The most extensive section sets out detailed guidelines for the selection and prescribing of non-opioid analgesics, opioid analgesics, drugs for neuropathic pain, and adjuvant drugs for the treatment of adverse effects, the enhancement of pain relief and the management of concomitant psychological disturbances. Information ranges from explanations of how specific drugs work, through the precautions to take in the presence of certain disorders, to a list of factors that influence the effectiveness of

opioids. Concerning the use of opioids, readers are reminded that psychological dependence does not occur in cancer patients and that the only correct dose of morphine is the one that relieves the pain. Part two provides a guide to opioid availability. A discussion of the reasons why opioids continue to be underprescribed or difficult to obtain is followed by an explanation of the Single Convention on Narcotic Drugs.

This thoroughly updated Second Edition of Clinical Laboratory Medicine provides the most complete, current, and clinically oriented information in the field. The text features over 70 chapters--seven new to this edition, including medical laboratory ethics, point-of-care testing, bone marrow transplantation, and specimen testing--providing comprehensive coverage of contemporary laboratory medicine. Sections on molecular diagnostics, cytogenetics, and laboratory management plus the emphasis on interpretation and clinical significance of laboratory tests (why a test or series of tests is being done and what the results mean for the patient) make this a valuable resource for practicing pathologists, residents, fellows, and laboratorians. Includes over 800 illustrations, 353 in full color and 270 new to this edition. Includes a Self-Assessment and Review book.

We anticipate the book to be a definitive text on the subject that explores all aspects of the study of adrenal cancer and the treatment of patients with the disease. Chapters will cover epidemiology, pathogenesis, genetics, cancer stem cells, historic and emerging therapies, mouse models of adrenal cancer, new developments in tumor profiling, worldwide collaborative groups and tumor registries together with resources for the practitioner and community of adrenal cancer scientists. We do not wish this book to compete with the other larger books in the Endocrine and Endocrine Surgery literature. In addition, it is not expected to cover benign adrenal diseases that have been covered in detail in other venues. We envision this book to be a very specialized and exhaustive text on basic, translational and clinical aspects of adrenal cancer.

For nearly 60 years, the tiny Mediterranean nation of Cyprus has taken a disproportionate share of the international spotlight. In The Cyprus Problem, James Ker-Lindsay--recently

appointed as expert advisor to the UN Secretary-General's Special Advisor on Cyprus--offers an incisive, even-handed account of the conflict. Ker-Lindsay covers all aspects of the Cyprus problem, placing it in historical context, addressing the situation as it now stands, and looking toward its possible resolution.

This is a general study of the development of higher education in Europe from antiquity until the end of the Middle Ages, set against a background of the social and political history of the period. It shows how the slender traditions of ancient learning, kept alive in the monastic and cathedral schools, was enriched by an enormous influx of knowledge from the Islamic world and how in consequence the schools developed into universities. These early institutions are examined from a variety of points of view, as institutions, as places where ideas spread and as points of interaction with local and national authority. Special attention is paid to early intellectual history and to the scientific disciplines and to the everyday life of the students and their teachers. The book is intended as a broad introduction to the subject for students of the history of education, but it will also attract general readers with only a slight knowledge of the subject.

The Neuroscience of Cocaine: Mechanisms and Treatment explores the complex effects of this drug, addressing the neurobiology behind cocaine use and the psychosocial and behavioral factors that impact cocaine use and abuse. This book provides researchers with an up-to-date understanding of the mechanisms behind cocaine use, and aids them in deriving new pharmacological compounds and therapeutic regimens to treat dependency and withdrawal symptoms. Cocaine is one of the most highly abused illicit drugs worldwide and is frequently associated with other forms of drug addiction and misuse, but researchers are still struggling to understand cocaine's neuropharmacological profile and the mechanisms of its effects and manifestations at the cognitive level. Cessation of cocaine use can lead to numerous adverse withdrawal conditions, from the cellular and molecular level to the behavioral level of the individual user. Written by worldwide experts in cocaine addiction, this book assists neuroscientists and other addiction researchers in unraveling the many complex facets of cocaine use and abuse. Contains in each chapter an abstract, key facts, mini dictionary of terms, and summary points to aid in understanding Illustrated in full color Provides unique full coverage of all aspects of cocaine and its related pathology Provides researchers with an up-to-date understanding of the mechanisms behind cocaine use, and aids them in deriving new pharmacological compounds and therapeutic regimens to treat dependency and withdrawal symptoms

Un best-seller di fine ottocento. Nello scenario di Napoli e della sua periferia De Marchi colloca la storia di un delitto. I due protagonisti, U barone e U prevete, sono entrambi esseri abietti: l'assassino è il barone Carlo Coriolano di Santafusca, un nobile decaduto vizioso, dissoluto e dedito alle pratiche più immorali accennate, sia pure piuttosto pudicamente, nel capitolo intitolato "L'orgia" dove, tra l'altro, si legge che l' "onda bionda e spumosa" della Sciampagna "spruzzò i seni delle ragazze" e dove "donne sdraiate e seminude [...] fumavano le loro sigarette"; ma oltre a ciò il nobile libertino è anche un darwiniano e acceso materialista, ma anche forte del

suo privilegiato ruolo sociale per ritenersi al di sopra della giustizia e delle leggi dello stato. L'assassinato invece è don Cirillo, un prete ricchissimo grazie al lotto e all'usura,

pure chiacchierato perché i numeri giusti per vincere al lotto li dà alla bella moglie del cappellaio... Sono in scena, insomma,

due squallidi personaggi che rappresentano il peggio della nobiltà e della chiesa, gli istinti più meschini e sfrenati.
