CURRENT AND EMERGING TRENDS OF MANAGEMENT EDUCATION IN THE ASIA-PACIFIC REGION

Cambridge University Press

The book in its tenth edition has been thoroughly restructured and revised. All the chapters of the present edition have been re-written not only to incorporate the latest developments in management but also to

make presentation of subject-matter more lucid and crisp. Chapter 3 of the previous edition (Managers and Environment) has been named as Management Challenges and Opportunities in the present edition so that proper focus is put on these issues. Thus, the present edition is ideally suited to management students as well as management practitioners, particularly those who have not gone through formal management education.

The nineteenth edition of *Modern Microeconomics* continues to provide a detailed understanding of the foundations of microeconomics. While it provides a solid foundation for economic analysis, it also lucidly explains the mathematical derivations of various microeconomic concepts. This textbook would be extremely useful for the students of economics.

ECONOMICS

Walter de Gruyter GmbH

This compact and student-friendly book presents the fundamental concepts of accounting. It brilliantly combines two areas of accounting—financial accounting and corporate accounting. While the initial and middle chapters give a clear analysis of financial accounting, the remaining chapters provide a succinct account of corporate accounting. The

chapters on financial accounting discuss in detail the concepts of accounting and accounting standards, the process and technique of accounting, source documents and vouchers for recording of transactions. Besides, they deal with the rules of debit and credit, and journal entry and preparation of trial balance as well as errors and their rectification. Finally, these chapters cover the concept and causes of depreciation and methods of recording

and providing depreciation, the adjustment required to prepare the final accounts of a trader including the accounting concepts of income and its measurements, and the meaning, objectives and methods of valuation of inventories. Chapters on corporate accounting discuss in detail the issue of shares, forfeiture and reissue of forfeited shares, and issue and redemption of debentures. In addition, they show how the final accounts of a company

are prepared as per Schedule VI of the Indian Companies Act, 1956. This well-organized and student-friendly book is intended as a text for the undergraduate students of management (BBA). Besides, anyone who wishes to know about the fundamentals of financial and corporate accounting will find the book extremely useful. Key Features Provides 400 solved problems to illustrate the concepts discussed. Includes 300 unsolved problems for practice. Contains a

variety of end-of-chapter questions. S. Chand Publishing Managers, in both the private and public sectors, are increasingly recognized as critical in the use of scarce resources for national development. There is no unanimity of opinion, however, regarding the models or approaches to management education that are most appropriate in different environmental settings. This report encompasses management education for each of the following

groups: the managers and future managers of large scale enterprises; entrepreneurs and small businessmen; and public administrators. It reviews worldwide trends and developments in management education for lessons in such areas as curriculum design, research and teaching methodology, and institutional policies and administration. Experience is drawn from recognized universities, educational organizations, civil service institutes, and corporations in

several major countries and regions of the world. *Concepts and Cases* Vikas Publishing House This book provides a complete and comprehensive coverage of the managerial economics syllabus of Gautam Buddh Technical University. It includes both, the basic microeconomics theories and some important aspects of macroeconomics including inflation, growth and business cycles. The subject matter is presented in a precise

and lucid manner. Economic laws and theories have been explained and illustrated by applying graphical and algebraic tools of analysis and also illustrated with appropriate real life examples. Review questions have been provided at the end of each chapter for students to test their own understanding of managerial economics.

 This book by Lionel
 Robbins first appeared in
 1932 as an outstanding
 English-language
 statement of the Misesian
 view of economic method,
 namely that economics is
 a social science and must
 advance its propositions
 by means of deductive
 reasoning and not
 through the methods used
 in the natural sciences.
 The case is argued here
 with patience and
 attention to scholarly
 details. The unfortunate

second edition of this
 book, which is more
 available today,
 introduces confusions by
 departing from Austrian
 microeconomic theory.
 Thus does the Mises
 Institute celebrate the
 75th anniversary of the
 first edition with this
 reprint. "Reading
 Robbins," writes Samuel
 Bostaph of the University
 of Dallas, "is an excellent
 way of contrasting his
 explanation of the basic
 nature of economics with
 that of the Austrian
 School, as found in the
 work of Mises as an

extension of Carl Mengers's foundations. Such a reading wonderfully clarifies one's understanding of the basic conception of economics as a science of human action, rather than one of mere 'economizing.' "
