Sharing the distinguished reputation of its companion text, Clinical Anesthesia, Seventh Edition, this completely revised edition of Review of Clinical Anesthesia provides an effective and comprehensive review in preparation of written and oral exams. With the intense volume of information available today, trying to keep up with what's new and relevant can overwhelm students and professionals alike. This text gives you the means to stop and review what you've learned with a sense of context and perspective. The multiple-choice questions in this text can be used as a means of self-assessment before taking a written examination. Additionally, the book may be of even greater benefit if it is incorporated throughout one's studies; a pretest will help the novice as well as the expert focus his or her reading; a post-test will allow one to assess self-mastery of the most relevant material.

Written and edited by experts in the field, the Handbook of Clinical Anaesthesia provides all the essential practical knowledge required by anaesthetists on co-existing medical conditions, operative procedures, and techniques. The fourth edition retains the concise and comprehensive nature of the third, giving readers all they need to know about each part of the FRCA syllabus in short, digestible, practical entries. The first part covers Patient Conditions; the second Surgical Procedures; and the third Anaesthetic Factors. Each part is subdivided into chapter on each organ system, and each chapter is divided into bite-sized entries. These are in alphabetical order, and cover all common and rare conditions that

anaesthetists will encounter within their practice. Avoiding prolonged discussion and multiple references, this is the ideal book to 'dip into' either for specific advice or general education, providing quick and reliable information. This fully revised new edition focuses on a broad spectrum of traumatic injuries and the procedures anesthesiologists perform to care for trauma patients perioperatively, surgically, and post-operatively. Special emphasis is given to assessment and treatment of co-existing disease, including surgical management of trauma patients with head, spine, orthopaedic, cardiac, and burn injuries. Topics such as training for trauma (including use of simulation) and hypothermia in trauma are also covered. Six brand new chapters address pre-hospital and ED trauma management, imaging in trauma, surgical issues in head trauma and in abdominal trauma, anesthesia for oral and maxillofacial trauma, and prevention of injuries. The text is enhanced with numerous tables and 300 illustrations showcasing techniques of airway management, shock resuscitation, echocardiography and use of ultrasound for the performance of regional anesthesia in trauma.
