**Episteme, etc.** Cambridge University Press

*The Cambridge History of Hellenistic Philosophy* Lulu.com Contains The Discourses/Fragments/Enchiridion 'I must die. But must I die bawling?' Epictetus, a Greek Stoic and freed slave, ran a thriving philosophy school in Nicopolis in the early second century AD. His animated discussions were celebrated for their rhetorical wizardry and were written down by Arrian, his most famous pupil. The Discourses argue that happiness lies in learning to perceive exactly what is in our power to change and what is not, and in embracing our fate to live in harmony with god and nature. In this personal, practical guide to the ethics of Stoicism and moral self-improvement, Epictetus tackles questions of freedom and imprisonment, illness and fear, family, friendship and love. Translated and Edited with an Introduction by Robert Dobbin

*The Theology of the Early Greek Philosophers* Oxford University Press

Truth, etc. is a wide-ranging study of ancient logic based upon the John Locke lectures given by the eminent philosopher Jonathan Barnes in Oxford. Its six chapters discuss, first, certain ancient ideas about truth; secondly, the Aristotelian conception of predication; thirdly, various ideas about connectors which were developed by the ancient logicians and grammarians; fourthly, the notion of logical form, insofar as it may be discovered in the ancient texts; fifthly, the question of the 'justification of deduction'; and sixthly, the attitude which has been called logical utilitarianism and which restricts the scope of logic to those forms of inference which are or might be useful for scientific proofs. In principle, the book presupposes no knowledge of logic and no skill in ancient languages: all ancient texts are cited in English translation; and logical symbols and logical jargon are avoided so far as possible. There is no scholarly apparatus of footnotes, and no bibliography. It can be read in an armchair. Anyone interested in ancient philosophy, or in logic and its history, will find it interesting.

Ashrams in Europe twenty-five hundred years ago? Greek philosophers studying in India? Meditation classes in ancient Rome? It sounds unbelievable, but it's historically true. Alexander the Great had an Indian guru. Pythagoras, Empedocles, and Plotinus all encouraged their students to meditate. Apollonius, the most famous Western sage of the first century c.e., visited both India and Egypt—and claimed that Egyptian wisdom was rooted in India. In *Lost Masters*, award-winning author Linda Johnsen, digging deep into classical sources, uncovers evidence of astonishing similarities between some of the ancient Western world's greatest thinkers and India's yogis, including a belief in karma and reincarnation. Today ancient Greek philosophers are remembered as the founders of Western science and civilization. We've forgotten that for over a thousand years they were revered as sages, masters of spiritual wisdom. *Lost Masters* is an exploration of our long-lost Western spiritual heritage and the surprising insights it can offer us today.

**Retrieving the Ancients** Oxford University Press

The rich civilizations of ancient China and Greece built sciences of comparable sophistication—each based on different foundations of concept, method, and organization. In this engrossing book, two world-renowned scholars compare the cosmology, science, and medicine of China and Greece between 400 B.C. and A.D. 200, casting new light not only on the two civilizations but also on the evolving character of science. Sir Geoffrey Lloyd and Nathan Sivin investigate the differences between the thinkers in the two civilizations: what motivated them, how they understood the cosmos and the human body, how they were educated, how they made a living, and whom they argued with and why. The authors'

new method integrally compares social, political, and intellectual patterns and connections, demonstrating how all affected and were affected by ideas about cosmology and the physical world. They relate conceptual differences in China and Greece to the diverse ways that intellectuals in the two civilizations earned their living, interacted with fellow inquirers, and were involved with structures of authority. By A.D. 200 the distinctive scientific strengths of both China and Greece showed equal potential for theory and practice. Lloyd and Sivin argue that modern science evolved not out of the Greek tradition alone but from the strengths of China, Greece, India, Islam, and other civilizations, which converged first in the Muslim world and then in Renaissance Europe.
