Pressure grouting is an essential construction procedure that is practiced by contractors and engineers around the world. Used since the 19th century, grouting reduces the amount of leakage through rock for dam foundations and underground works. It also strengthens soils to provide a stable foundation to support the weight of surface structures, such as buildings, bridges, and storage tanks. In addition, it is frequently used to repair deteriorated concrete and to produce concrete underwater. This manual introduces various types of equipment employed in pressure grouting applications performed in geotechnical works and examines the operating principles and maintenance issues relative to each equipment type. The term pressure grouting encompasses a wide variety of applications and operations, including dam foundation grouting, soil stabilization and permeation, consolidation and compaction grouting (except low-mobility), water cutoff and structural stabilization in rock tunnels, deep foundations via drilled piers, underwater concrete, structural concrete repairs, raising of settled slabs and structures, rock and soil anchors, and machine foundations and bases. The applications for pressure grouting operations are almost limitless, as the equipment can be employed anywhere fluid grout can be used. Primarily intended for machine operators and maintenance mechanics, this manual will also prove useful to specification writers, engineers, contractors, purchasing managers, and others who have a responsibility to specify, acquire, operate, or maintain pressure grouting equipment. Topics covered include mixers, agitators, pumps, delivery systems and accessories, but not electronic monitoring and other ancillary equipment.

This Operations and Maintenance (O & M) Manual has been created as a guide for monitoring and maintaining the performance of the expanded bioventing blower system and vent well plumbing at the Eglin Main Base Old Fire Training Area (old Eglin FTA) at Eglin Air Force Base (AFE), Florida. This site is also identified as Installation Restoration Program (IRP) Site FT-28. Record drawings of the expanded bioventing system installed at site FT-28 are provided in Appendix A.

Public agencies, private corporations, nonprofit institutions, and other organizations regularly invest millions of dollars in acquiring buildings and other constructed facilities to support their lines of business. For this investment, the owner receives a complex structure composed of hundreds of separate but interrelated

components, including roofs, walls, foundations, electrical, plumbing, heating, air conditioning, ventilation, fire, communication, safety, and architectural systems. These components and systems must all be maintained and repaired to optimize the facility's performance throughout its service life and to provide a safe, healthy, and productive environment for its users and occupants. Linking the Construction Industry: Electronic Operation and Maintenance Manuals is a summary of a workshop that was held at the National Academy of Sciences in Washington, D.C., on October 13, 1999. The workshop, planned and organized by the Federal Facilities Council and the National Institute of Building Sciences, brought together an invited audience of building industry stakeholders, including owners and operators from federal agencies and other organizations, building component and system manufacturers, publishers of building product data and maintenance manuals, and CMMS software developers to revisit the issue of electronic operation and maintenance manuals.

Operation and Maintenance Manual SME

A step-by-step guide to creating accurate, comprehensive, and easy to understand operations and maintenance manuals. From defining the audience to producing a hardcopy or online manual, the author draws on his years of experience to explain the process from start to finish. This guide is required reading for the facility operator, maintenance technician, training coordinator, and manager; those who must have the necessary tools and information to create O&M manuals that are clear, concise, and written at the level of the staff involved in the day-to-day operations and maintenance of the facility. This book, which includes valuable sample manual sections, covers such topics as overall organization, defining the level of detail, standard operating procedures, developing a style guide, developing HTML-based manuals, and placing and viewing CAD drawings online.

This letter transmits three copies of the Operation and Maintenance (O & M) Manual prepared for the expanded bioventing system recently installed at Facilities 44625D and 44625E, Cape Canaveral Air Station (AS), Florida. Appendix A of the O & M Manual contains record drawings for the installed system. This letter also provides a summary of the work performed by Parsons Engineering Science, Inc. (Parsons ES) at Facilities 44625D and 44625E from November 1996 through March 1997, and at Facility 1748 in November 1996, and presents initial bioventing system operating parameters and sampling results. Copies of this letter and the O & M Manual also have been sent to Mr. Ed Worth at Patrick Air Force Base (AFB). Mr. Worth is the current point of contact for extended bioventing activities at Cape Canaveral AS as well as Patrick AFB.
