### 21ST CENTURY: MYSTERIES OF DEEP SPACE

Food and Agriculture Organization of the United Nations

TIME for Kids The BIG Book of Why: Space answers the why, what, when, where, who and how questions about earth and space that kids commonly ask, but adults can rarely answer. Why don't we fall off the planet? Why is the sky blue? Why are diamonds so rare? Why is the sun so bright? Where does our solar system end? Written in an upbeat manner, each answer is accompanied by either a photo or an illustration to show the reasons why. Of course, TIME For Kids goes beyond answering the question, and dips into the science or history to further explain the answer in an easy-to-follow, straightforward manner. TIME For Kids The BIG Book of Why: Space is a must-have book to satisfy the most curious of kids.

Teacher Created Materials

The enormous facts about our solar system can make your head spin! You hear about huge distances (like the 483 million miles separating the sun and Jupiter), huge timelines (it's been 14 billion years since the big bang), and even huger mysteries (why the universe is expanding). How can all these big numbers and concepts make more sense? Infographics! The charts, maps, and illustrations in this book tell a visual story to help you better understand key concepts about our solar system. Crack open this book to explore mind-boggling questions such as: ? How long would it take a beam of light to cross the universe? ? What exactly would happen if you were sucked into a black hole? ? Does alien life reside somewhere in our galaxy? The answers are sure to be out of this world!

**Super Cool Space Facts** Ballantine Books

In Dwarf Planets: Pluto and the Lesser Planets, students will learn about the five discovered dwarf planets in our solar system and make observations about orbital patterns, new discoveries, and more. Filled with fun facts, young learners will love exploring the scientific information and drawing conclusions about life now and in the future. The Inside Outer Space series takes readers on an intergalactic journey that unravels the mysteries of the universe. Each 24-page book informs readers in grades K-3 on the Sun, Earth, planets, and stars, while also igniting imaginations about the unknown. Stunning photographs and diagrams engage readers, while text-based questions aid in reading comprehension

### PALE BLUE DOT

Libraries Unlimited

An exciting introduction to the solar system from Chris Ferrie, #1 science book writer for children, and creator of the Baby University series 8 little planets with the Sun at the center.each one wishing it were a little bit better...Old slow Neptune felt it was behind.165 years to circle the sun is an awful long time!the 8th little planet did not worry.It spins on its axis in a really big hurryTo the tune of "Ten Little Monkeys Jumping on the Bed" comes a new bedtime story from bestselling author Chris Ferrie that's sure to get little ones excited about the solar system while learning new facts about each planet!

**The World Book Encyclopedia** Little, Brown Spark

This book describes the major and minor worlds of the planets and their moons.

**13 Planets** Sourcebooks, Inc.

Explore deep space and beyond Get ready to take a thrilling journey to the farthest reaches of the universe. Space Exploration for Kids is loaded with out-of-this-world facts and eye-popping photographs that give you an inside look into the daily lives of astronauts. From learning the history of space exploration and rockets to what life is like up there, this top choice among space books for kids 6-9 will inspire you to reach for the stars. Discover what it takes to become an astronaut in this informative selection in space books for kids 6-9. Included are sections about training, how space

affects the human body, and the type of work they conduct. Learn about different types of crewed spacecraft, and find out how to design your own rocket ship! Your first step toward a rocket-fueled adventure begins right now. This standout among space books for kids 6-9 includes: Reach for the stars—One of the most engaging space books for kids 6-9 takes you beyond the solar system and into deep space. Astronaut 101—From astronaut training to living in space, there's a special focus on astronauts and space travel. Learn more!—A selection of bonus materials like sidebars, fun activities, and callouts make your learning experience even more fun. Go beyond other space books for kids 6-9 with this informative book about the final frontier.

**Cassini Mission** Bloomsbury Publishing USA

This activity book has been designed, written and illustrated to bring children and young people closer to the world of plant protection; the science that deals with plant health. Although addressed to an age group between eight and twelve years, this book can also be useful for older kids and educators. It can be considered as first, simple plant protection manual, designed on the occasion of the International Year of Plant Health 2020.

### EXPLORE MY WORLD PLANETS

National Geographic Books

Blast off on an exploration of our solar system—a fun space book for kids 3 to 5 Get even the smallest astronomer excited for the big universe of space, from the bright and burning sun to our own blue Earth to ice-capped Pluto and every planet in between. With this book, kids will explore the entire solar system through incredible photos and fascinating facts on what makes each planet so special—like their size, distance from the sun, what the surface is like, how many moons they have, and more! This planets for kids book includes: Big, beautiful images—Vibrant photos will take kids deep into space and onto each planet—no telescope required. Astronomy for kids—Learn all about the eight planets in our solar system, plus dwarf planets Ceres, Pluto, Eris, Haumea, and Makemake. Fun space facts—Did you know the bubbles in soda are the same gas that's on Venus? Out of this world facts will keep kids glued to the page and excited to explore the sky. Show kids the amazing universe that surrounds them with this fun and engaging astronomy book.

**Big Book of Stars and Planets** Carson-Dellosa Publishing

Based on the renowned Renzulli Method, which has been adopted in schools all over the country, Light Up Your Child's Mind presents a practical program to help children fire up a love of learning to last a lifetime. World-renowned experts Drs. Renzulli and Reis illustrate the crucial role parents can play in their children's development and address how they can work with teachers to enhance their children's education. They uncover the hidden potential of daydreamers, rebels, and one-track minds, arguing that gifted behavior -- basic smarts, high levels of task commitment, and creativity -- can be fostered in bright children, even unmotivated ones. Step by step, Light Up Your Child's Mind will show parents how to set their kids on the path to a rewarding future.

*The WINNERS! Handbook* Rockridge Press

Take a trip around our solar system, Find out how Pluto was named, See amazing snapshots from space & Learn more than forty fun facts about our universe Level 2 includes longer sentences with richer vocabulary, type set line to line to aid readability, varied photographic treatments, and brief chapters with simple illustrated diagrams and a glossary. Special features include How Big?, Take a Close Look, Did You Know?, Words to Know, Fun Facts and full color photographs, as well as a full page, simply labeled diagram showing body parts. Ages 6+

*Activity book - Healthy plants, healthy planet* National Geographic Books

Middle-grade readers can travel into deep space as they discover the past, present and future of space exploration. Original.

**Neptune** Capstone

An encyclopedia designed especially to meet the needs of elementary, junior high, and senior high school students.

**21st Century: Mysteries of Deep Space** National Geographic Books

Shocked to be stripped of his planet status, Pluto goes on a quest to find his place in the universe. Includes educational materials.

**History at NASA** Carson-Dellosa Publishing

Uranus is the seventh planet from the sun and has a special feature, it tilts! Discover the mysteries of this ice giant that sits half in darkness for more than 40 years at a time!

**Uranus** Harper Collins

The most comprehensive look at our relationship with Mars—yesterday, today, and tomorrow—through history, archival images, pop culture ephemera, and interviews with NASA scientists Mars has been a source of fascination and speculation ever since the ancient Egyptians observed its blood-red hue and named it for their god of war and plague. But it wasn't until the 19th century when “canals” were observed on the surface of the Red Planet, suggesting the presence of water, that scientists, novelists, filmmakers, and entrepreneurs became obsessed with the question of whether there's life on Mars. Since then, Mars has fully invaded pop culture, inspiring its own day of the week (Tuesday), an iconic Looney Tunes character, and many novels and movies, from Ray Bradbury's *Martian Chronicles* to *The Martian*. It's this cultural familiarity with the fourth planet that continues to inspire advancements in Mars exploration, from NASA's launch of the Mars rover Perseverance to Elon Musk's quest to launch a manned mission to Mars through SpaceX by 2024. Perhaps, one day, we'll be able to answer the questions our ancestors asked when they looked up at the night sky millennia ago.

#### **99 Jumpstarts for Kids' Science Research** Grand Central Publishing

Ignite their passion for exploring the night sky—the astronomer's guidebook for kids ages 7 to 13 “No matter how many times you've orbited the Sun, *Astronomy for Kids* is really for kids of all ages. Dr. Betts shows you how to become an astronomer—an observer of the stars. With this book, you can know the cosmos and your place within it. Read on, walk out, and look up!”—Bill Nye, science educator, author, and CEO of The Planetary Society One of the coolest things about outer space is that anyone can explore it. All you have to do is go outside and look up! Using plain sight, binoculars, or a small telescope, *Astronomy for Kids* shows stargazers how easy it is to explore space, just by stepping outside. With this book as their guide to the northern hemisphere, kids will learn to find and name amazing objects in the night sky. Fully illustrated with fun facts throughout, kids can point out sights to friends and family, saying things like, “that's Jupiter,” and, “those stars are the constellation Cygnus the Swan,” and maybe even, “that group of stars doesn't have a name but I think it looks like my dog getting belly rubs.” From the Milky Way Galaxy to Mars to the Moon's craters and mountains—*Astronomy for Kids* helps young astronomers discover important parts of our solar system, with: 30 sights for the naked eye (yes, 30!) objects to see without any equipment, including Orion's Belt, the Big Dipper, Mars, and even the International Space Station. 25 sights magnified with binoculars or a basic telescope to make objects in the sky easier to find and explore. Plus, buying tips and usage tricks to get the most out of astronomy equipment. Clear illustrations that show kids where to look and what they can expect to see. Like all big things, outer space is something you have to see to believe. *Astronomy for Kids* teaches kids that planets, shooting stars, constellations, and meteor showers are not only in books—but right above them.

#### *Exploring the Solar System* Quirk Books

“Fascinating . . . memorable . . . revealing . . . perhaps the best of Carl Sagan's books.”—The Washington Post Book World (front page review) In *Cosmos*, the late astronomer Carl Sagan cast his gaze over the magnificent mystery of the Universe and made it accessible to millions of people around the world. Now in this stunning sequel, Carl Sagan completes his revolutionary journey through space and time. Future generations will look back on our epoch as the time when the human race finally broke into a radically new frontier—space. In *Pale Blue Dot*, Sagan traces the spellbinding history of our launch into the cosmos and assesses the future that looms before us as we move out into our own solar system and on to distant galaxies beyond. The exploration and eventual settlement of other worlds is neither a fantasy nor luxury, insists Sagan, but rather a necessary condition for the survival of the human race. “Takes readers far beyond *Cosmos* . . . Sagan sees humanity's future in the stars.”—Chicago Tribune

#### **THE SUN, ENERGY, AND CLIMATE CHANGE**

##### Encyclopaedia Britannica

Launched on Oct. 15, 1997, the spacecraft entered orbit around Saturn on June 30, 2004 (PDT). After its four-year prime mission, Cassini's tour was extended twice. Beginning in 2010, Cassini began a seven-year mission extension in which it completed many moon flybys on Saturn and Titan. In April 2017, operators placed Cassini on an impact course that unfolded over five months of daring dives. On Sept. 15, 2017, the spacecraft made its final approach to the giant planet Saturn. But this encounter was like no other. This time, Cassini dived into the planet's atmosphere, sending science data for as long as its small thrusters could keep the spacecraft's antenna pointed at Earth. To its very end, Cassini was a mission of thrilling exploration.
