Network Agility a Complete Guide

What if your customers had a vested interest in guiding your company toward greater success? What if your employees had a personal as well as professional commitment to elevating your organization? Imagine how different your

results would be if investors, vendors, and even analysts treasured the relationship they have built with you? Most important . . . is your company capable of setting aside a bit of its own self-interest to become part of dramatically more rewarding collaborative effort? That's the provocative and ultimately earthshaking question David Nour poses. He argues that co-creation is a transformational journey that naturally leads to growth and evolution . . . because it gives birth to shared interests that dwarf anything that existed previously. In Co-Creation, David

Nour makes the case that co-creation leads to Market Gravity™, a force that attracts stakeholders to your business because they recognize that many others have also united their interests with yours. It's the sense—backed by tangible metrics—that this is bigger than any of us imagined . . . except that you imagined precisely such an outcome. That's the power of co-creation.

Organization Agility provides a clear, concise roadmap to improved implementation of change. Written by two organizational researchers at USC's Center for Effective Organizations and a management consultant with Strategy& (formerly Booz & Company), this book provides the means for assessing an organization's agility and formulating an improvement plan. Beginning with a discussion about the meaning of "agility," the authors enumerate the various contributing factors that affect how quickly an organization responds to change, and the efficiency of the response. An agility survey shows readers how their own organization compares in terms of both perception and implementation, allowing the formulation of an "Agility Profile" that can point out strengths while highlighting areas in need of improvement. Case studies demonstrate the real-world impact of effective agility strategy, and example scenarios illustrate improved responses by each agility "type." Eighty percent of large-scale organizations fail to meet their objectives, and poor agility is often to blame. Organizations respond to changes in the marketplace, economy, and society

by implementing changes in their processes and procedures, but planning and implementing change takes time. During that time, the context of the initial decision frequently evolves, leaving the organization one step behind. Agility is the ability to quickly implement change without sacrificing strategy, and Assessing Organization Agility helps readers to: Discover the organizational/operational factors that contribute to agility Assess current agility from all perspectives, highlighting areas for improvement Implement processes and procedures that streamline change events Maintain forward trajectory with adjustments to strategy and implementation The current pace of technical, competitive, and environmental change is faster than ever before, and response requirements are far more complex and sophisticated. In this turbulent environment, agility can mean the difference between success and stagnation. Assessing Organization Agility asks the questions and provides the answers that lead to better organizational reflex and more effective response. The Agile Self-assessment Game CRC Press

Designing agile organizations fit for a dynamic, volatile, uncertain, complex, and ambiguous (VUCA) world has become a necessary skill for successful 21st century leaders. This book provides a summary of many classical strategic management techniques, before introducing the reader to emergent concepts that are more in tune with the VUCA environment. It explains how the culture defines an environment that either enables or inhibits the creation of new knowledge which translates into innovation and fast, effective decision-making. The name of the game here is speed. As such, this book provides a practical framework for leaders or managers to build agile organizations designed to accelerate innovation and adaptability. Successful executives must rapidly identify many "unseen, and rarely discussed" interferences that creep into the culture of an organization that disrupt the flow of critical knowledge. Executives

worldwide must quickly identify those unseen viruses within their organizations so they can take targeted action to fix the root problem rather than just try a “flavor of the month” approach. They need a way to diagnose underlying root causes of cultural infections, and the diagnostic mentoring methodology described here provides a practical way for executives to do just that.

Conrad's new book, "Beyond Real Estate Licensing: Case Study Analysis of Behavioral Assessment Relationship Applied to Human Performance" is an outgrowth of his doctoral studies. The specific problem this research addresses pertains to whether behavioral readiness has an impact upon real estate brokerage sales performance. Although real estate students may score high on the real estate licensing examinations, it may not prove the students ability to perform in a real estate brokerage performance sales environment. The most important performance criteria in real estate sales could be conceived as a developed personality capacity and alignment of motivational values. It is also noted that

learning sales facilitators can not guarantee the knowledge transfer to performance unless, behavioral readiness is presented. Therefore behavioral assessment analysis can be considered as an integral aide to performance improvement. The purpose of this study was to establish the organizational responsibility towards behavioral assessment analysis during the pre-employment phase. The results of this study indicate that behavioral assessments may improve the overall recruitment and selection capability and to identify the necessary behavioral readiness that is necessary for knowledge transfer into sales performance.

Your Company Isn't Fast Enough. Here's How to Change That. The traditional hierarchical organization is dead, but what replaces it? Numerous new models--the agile organization, the networked organization, and holacracy, to name a few--have emerged, but leaders need to know what really works. How do you build an organization that is responsive to fast-changing markets? What kind of organization delivers both speed and scale, and how do you lead it? Arthur Yeung and Dave Ulrich provide leaders with a much-needed blueprint for reinventing the organization. Based on their in-depth research at leading Chinese, US, and European firms such as Alibaba, Amazon, DiDi, Facebook, Google, Huawei, Supercell, and Tencent, and drawing from their synthesis of the latest organization research and practice, Yeung and Ulrich explain how to build a new kind of organization (a "market-oriented ecosystem") that responds to changing market opportunities with speed and scale. While other books address individual pieces of the puzzle, *Reinventing the Organization* offers a

practical, integrated, six-step framework and looks at all the decisions leaders need to make--choosing the right strategies, capabilities, structure, culture, management tools, and leadership--to deliver radically greater value in fast-moving markets. For any leader eager to build a stronger, more responsive organization and for all those in HR, organizational development, and consulting who will shape and deliver it, this book provides a much-needed roadmap for reinvention.
