Emphasizing applications over calculation, worldwide-bestseller STATISTICS FOR MANAGEMENT AND ECONOMICS, ABBREVIATED 10e demonstrates how vital statistical methods are for today's managers and economists—and teaches students how to apply these tools to real business problems. Written specifically for the one-term modern business statistics course, the text uses a unique three-step ICI approach to problem solving. This approach teaches students to IDENTIFY the correct statistical technique by focusing on the problem objective and data type, then COMPUTE the statistics (doing them by hand, using Excel 2013, or using MINITAB 16), and ultimately INTERPRET results in the context of the problem. Incorporating various functional areas of business, data-driven examples, exercises, and cases give students plenty of hands-on practice applying statistical

applications used by marketing managers, financial analysts, accountants, economists, and others. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

Managers need access to some statistical advice from time to time to help in solving business problems. Students need access to statistical methods to support work in non-statistics courses, case studies and projects. What is needed will depend on the demands of the problem and how much statistics the manager or student already knows. The requirement is for flexible decision support. This unique book presents statistical ideas and models in easily accessible form describing both methods and issues of application. statsNotes are organized as a set of over one hundred notes rather than as a number of chapters. This enables managers and students to locate just what they need for the problem they have. Each note consists of a description of what to do, an example, the rationale, links to other notes. Managers and students can choose to use as many notes as necessary, which might be just one note or a set of linked notes. Deciding which method will be helpful depends not just on finding an appropriate statistical method but on the business context too. statsNotes provide advice at three levels: Business fit — problems from a business viewpoint and how some statistics might help; Perspectives — discussion of issues with widespread implications; Implementation — how to use a model or method. While the range of topics covered is similar to those in introductory textbooks and courses, the focus is on management decision and the methods for dealing with risky decisions and management judgment in this book are usually found in more specialist texts. Contents: Introduction and Guide Overview of the statsNotes The statsNotes Why Do statsNotes Look Like That? A Quick Guide to Definitions, Functions and Charts Readership: Undergraduate students in finance, general management and operational management; MBA students; practicing managers. Key Features: Modular format means that readers can easily access just what they need for a particular problem It focuses on interaction between management problems and statistical problems EXCEL functions are used in preference to algebraic formulae.
