A practical guide to passive investing Time and again, individual investors discover, all too late, that actively picking stocks is a loser's game. The alternative lies with index funds. This passive form of investing allows you to participate in the markets relatively cheaply while prospering all the

more because the money saved on investment expenses stays in your pocket. In his latest book, investment expert Richard Ferri shows you how easy and accessible index investing is. Along the way, he highlights how successful you can be by using this passive approach to allocate funds to stocks, bonds, and other prudent asset classes. Addresses the advantages of index funds over portfolios that are actively managed Offers insights on index-based funds that provide exposure to designated broad markets and don't make bets on individual securities Ferri is also author of the Wiley title: The ETF Book and co-author of The Bogleheads' Guide to Retirement Planning If you're looking for a productive investment approach that won't take all of your time to implement, then The Power of Passive Investing is the book you need to read.

*From Theory to Practice and Beyond* John Wiley & Sons

Since the formalization of asset allocation in 1952 with the publication of Portfolio Selection by Harry Markowitz, there have been great strides made to enhance the application of this groundbreaking theory. However, progress has been uneven. It has been punctuated with instances of misleading research, which has contributed to the stubborn persistence of certain fallacies about asset allocation. A Practitioner's Guide to Asset Allocation fills a void in the literature by offering a hands-on resource that describes the many important innovations that address key challenges to asset allocation and dispels common fallacies about asset allocation. The authors cover the fundamentals of asset allocation, including a discussion of the attributes that qualify a group of securities as an asset class and a detailed description of the conventional application of mean-variance analysis to asset allocation.. The authors review a number of common fallacies about asset allocation and dispel these misconceptions with logic or hard evidence. The fallacies debunked include such notions as: asset allocation determines more than 90% of investment performance; time diversifies risk; optimization is hypersensitive to estimation error; factors provide greater diversification than assets and are more effective at reducing noise; and that equally weighted portfolios perform more reliably out of sample than optimized portfolios. A Practitioner's Guide to Asset Allocation also explores the innovations that address key challenges to asset allocation and presents an alternative optimization procedure to address the idea that some investors have complex preferences and returns may not be elliptically distributed. Among the challenges highlighted, the authors explain how to overcome inefficiencies that result from constraints by expanding the optimization objective function to incorporate absolute and relative goals simultaneously. The text also explores the challenge of currency risk, describes how to use shadow assets and liabilities to unify liquidity with expected return and risk, and shows how to evaluate alternative asset mixes by assessing exposure to loss throughout the investment horizon based on regime-dependent risk. This practical text contains an illustrative example of asset allocation which is used to demonstrate the impact of the innovations described throughout the book. In addition, the book includes supplemental material that summarizes the key takeaways and includes

information on relevant statistical and theoretical concepts, as well as a comprehensive glossary of terms.

**Beyond Diversification: What Every Investor Needs to Know About Asset Allocation** Blessed by the Potato Publishing

For most of the past 50 years the simplest asset allocation solution was often the best. A balanced portfolio of stocks and bonds provided the investor with good returns. Unfortunately, this approach is not likely to work as well in the future. Interest rates are close to historic lows, equity valuations and bond prices appear stretched, and global economic growth has slowed. Investors need a new asset allocation solution. In *Portfolio Construction for Today's Markets*, BlackRock Portfolio Manager and investment expert Russ Koesterich addresses this problem by describing the step-by-step approach to building a portfolio consistent with investor goals and suited to today's market environment. This portfolio construction process is divided into six stages, beginning with setting objectives and moving through assessing risk tolerance, diversification, the importance of factors, generating return assumptions, and combining assets in a risk-controlled manner. In the final chapter, Mr Koesterich presents a highly useful summary of the five fundamental rules of asset allocation and a five-step checklist to follow when constructing portfolios. For investors and their advisors constructing portfolio in today's markets, this book is an indispensable new guide.

*Rational Expectations* is a clean sheet of paper in the wonky world of quantitatively based asset allocation aimed at small investors. Continuing the theme of the *Investing for Adults* series, this full-length finance title is not for beginners, but rather assumes a fair degree of quantitative ability and finance knowledge. If you think you can time the market or pick stocks and mutual fund managers, or even if you think that you can formulate an optimally efficient mean-variance asset allocation with a black box, then learn some basic finance and come back in a few years. On the other hand, if you know your way around risk premiums and standard deviations and know who Irving Fisher and Benjamin Graham were, and if you want to sharpen your asset class skills, you've come to the right place.

"The Ages of the Investor: A Critical Look at Life-cycle Investing" is intended to be the first installment in the "Investing for Adults" series. Just as grown-ups do not believe in the Tooth Fairy, the Easter Bunny, or Santa Claus, "Investing adults" know that there is no such creature as the Stock-picking Fairy or the Market-timing Fairy. Further, there is no Risk Fairy who will write you cheap options that will protect your stock holdings against loss. Investing adults are familiar with Gene Fama, Zvi Bodie, Jack Bogle, and Burton Malkiel, and understand that a mean variance optimizer does not blend vegetables. In other words, this series is not for beginners. Future topics will, with luck, include the limits of market efficiency and diversification in increasingly non-segmented global markets.

William J. Bernstein promises to lay out an investment strategy that any seven year old could understand and will take just 15 minutes of work per

year. He also promises it will beat 90% of finance professionals in the long run, but still make you a millionaire over time. Bernstein is addressing young Americans just embarking on their working careers. Bernstein advocates saving 15% of one's salary starting no later than age 25 into tax-sheltered savings plans (IRA or 401(k) in the U.S., RRSPs or Registered Pension Plans in Canada), and divvying up the money into just three mutual funds: a U.S. total stock market index fund, an international stock market index fund and a U.S. total bond market index fund. For millennials, saving 15% of salary is the financial equivalent of dying, which is why Bernstein titles his document 'IF you can.'

[Overreaction, Complexity, and Their Consequences](#) John Wiley & Sons

With all of our focus on assets - and how much and when to allocate them - are we missing the bigger picture? Our book begins by reviewing the historical performance record of popular assets like stocks, bonds, and cash. We look at the impact inflation has on our money. We then start to examine how diversification through combining assets, in this case a simple stock and bond mix, works to mitigate the extreme drawdowns of risky asset classes. But we go beyond a limited stock/bond portfolio to consider a more global allocation that also takes into account real assets. We track 13 assets and their returns since 1973, with particular attention to a number of well-known portfolios, like Ray Dalio's All Weather portfolio, the Endowment portfolio, Warren Buffett's suggestion, and others. And what we find is that, with a few notable exceptions, many of the allocations have similar exposures. And yet, while we are all busy paying close attention to our portfolio's particular allocation of assets, the greatest impact on our portfolios may be something we fail to notice altogether...
