Acute Heart Failure CRC Press

This book is a comprehensive overview of heart failure and cardiac transplantation and integrates scientific and clinical information about the physiology, pathophysiology, diagnosis, and treatment of this disorder. Organized into five parts, it reviews the history and basic mechanisms of heart failure; etiology of heart failure; heart failure disease progression; advanced therapies for heart failure; and cardiac transplantation. The book presents basic concepts in the physiology, molecular biology, pathology, and epidemiology of the normal and failing heart; known causes of heart failure, such as right heart failure, valvular cardiomyopathy, molecular mechanisms of sarcomeric cardiomyopathies, and neuromuscular cardiomyopathy; cardiorenal syndrome; neurohormonal activation; cardiac resynchronization, ventricular assist devices; regenerative mechanisms; orthotopic heart transplantation; early and late management of the post-transplant patient; heart transplantation and antibody-mediated rejections; heart-lung transplantation; and cardiac xenotransplantation. Featuring contributions from leaders in the fields of heart failure, cardiac transplantation, cardiac pathology, and cardiovascular molecular research, *Congestive Heart Failure and Cardiac Transplantation* is a valuable compendium for cardiologists, cardiothoracic surgeons, researchers, trainees, and students.

[Manual of Heart Failure Management](#) Springer

Taking the reader from an understanding of the basic mechanisms of heart failure through to an appreciation of the complexities of heart failure management and the remarkable improvements possible with good treatment, the *Oxford Textbook of Heart Failure 2e* covers all aspects necessary to manage a patient with heart failure. In full colour throughout, containing over 300 illustrations, and supported by detailed referencing from the huge evidence base that has developed over the last two decades, the textbook also includes extensive chapters on common co-morbidities. The new edition has been completely updated in line with new British and European Guidelines and contains new chapters on; Natriuretic Peptides and Novel Biomarkers in Heart Failure, The Future of Heart Failure, and Regenerative Therapies. Essential reading for consultant cardiologists and those in training, general physicians and those caring of the elderly, cardiothoracic surgeons, primary care doctors, pharmacists, and specialist nurses. Springer

Leading practitioners from the University of Pennsylvania review all aspects of heart failure diagnosis and management, with a particular emphasis on office-based/ambulatory care. Following the problem-solving steps used in an office-based practice, the authors provide extensive coverage of the presenting signs and symptoms of heart failure, as well as the tools with which to evaluate left-ventricular function, hemodynamics, and exercise performance. They also discuss the complex, evidenc-based therapeutic options for treating patients with dyspnea, fatigue, or edema, following the new ACC/AHA heart failure guidelines that are specifically and directed at targeted symptoms.

Acute Heart Failure Springer

This comprehensively covers everything from pathophysiology to the evaluation of patients presenting with heart failure to medical management, device therapy, heart transplantation and mechanical circulatory support, and include relevant cardiac imaging studies such as echocardiograms and magnetic resonance imaging studies which could be seen in their entirety as well as pathology slides, hemodynamic tracings and videos of cardiac surgery such as heart transplants and ventricular assist device implantation. Finally, the book would have videos of patients with heart failure, heart transplants or ventricular assist devices, describing their clinical presentation and experiences. It is structured so that it can be used as a guide by physicians studying for the general Cardiology or Advanced Heart Failure and Cardiac Transplantations Boards.

CONGESTIVE HEART FAILURE AND CARDIAC TRANSPLANTATION

Cambridge University Press

This book introduces pathophysiology and practical heart failure (HF) management at the acute, in-hospital stages during hospitalization and also in the end-stages of HF. Given its increasing incidence and prevalence, we live in a world that is essentially facing an HF pandemic. A country with an ageing population, Japan is unique in terms of the selection of medical treatment, diagnostic techniques, team managing and other approaches. This book sheds new light on the clinical challenges involved in reducing re-hospitalization and improving patients' prognosis and ADL/QOL, while also reporting on the status quo in Japan. By highlighting these challenges and the methods used to address them, it will encourage experts around the globe to intensively discuss and accelerate research in this field. Including contributions by authors who have played central roles in managing HF in Japan, the book offers an indispensable guide not only for clinicians, technicians and nurses in this field, but also for general physicians, emergency physicians and all others who are involved in the management of acute and end-stage HF.

Core Topics in Critical Care Medicine Little, Brown Medical Division

Find fast answers to inform your daily diagnosis and treatment decisions! Ferri's Clinical Advisor 2021 uses the popular "5 books in 1" format to deliver vast amounts of information in a clinically relevant, user-friendly manner. This bestselling reference has been significantly updated to provide you with easy access to answers on 1,000 common medical conditions, including diseases and disorders, differential diagnoses, clinical algorithms, laboratory tests, and clinical practice guidelines—all carefully reviewed by experts in key clinical fields. Extensive algorithms, along with hundreds of new figures and tables, ensure that you stay current with today's medical practice. Contains significant updates throughout, covering all aspects of current diagnosis and treatment. Features 27 all-new topics including chronic rhinosinusitis, subclinical brain infarction, reflux-cough syndrome, radiation pneumonitis, catatonia, end-stage renal disease, and genitourinary syndrome of menopause, among others. Includes new appendices covering common herbs in integrated medicine and herbal activities against pain and chronic diseases; palliative care; and preoperative evaluation. Offers online access to Patient Teaching Guides in both English and Spanish.

Heart Failure Cambridge University Press

The ESC Textbook of Intensive and Acute Cardiovascular Care is the official textbook of the Acute Cardiovascular Care Association (ACVC) of the ESC. Cardiovascular diseases (CVDs) are a major cause of premature death worldwide and a cause of loss of disability-adjusted life years. For most types of CVD early diagnosis and intervention are independent drivers of patient outcome. Clinicians must be properly trained and centres appropriately equipped in order to deal with these critically ill cardiac patients. This new updated edition of the textbook continues to comprehensively approach all the different issues relating to intensive and acute cardiovascular care and addresses all those involved in intensive and acute cardiac care, not only cardiologists but also critical care specialists, emergency physicians and healthcare professionals. The chapters cover the various acute cardiovascular diseases that need high quality intensive treatment as well as organisational issues, cooperation among professionals, and interaction with other specialities in medicine. SECTION 1 focusses on the definition, structure, organisation and function of ICCU's, ethical issues and quality of care. SECTION 2 addresses the pre-hospital and immediate in-hospital (ED) emergency cardiac care. SECTIONS 3-5 discuss patient monitoring, diagnosis and specific procedures. Acute coronary syndromes (ACS), acute decompensated heart failure (ADHF), and serious arrhythmias form SECTIONS 6-8. The main other cardiovascular acute conditions are grouped in SECTION 9. Finally SECTION 10 is dedicated to the many concomitant acute non-cardiovascular conditions that contribute to the patients' case mix in ICCU. This edition includes new chapters such as low cardiac output states and cardiogenic shock, and pacemaker and ICDs: troubleshooting and chapters have been extensively revised. Purchasers of the print edition will also receive an access code to access the online version of the textbook which includes additional figures, tables, and videos to better illustrate diagnostic and therapeutic techniques and procedures in IACC. The third edition of the ESC Textbook of Intensive and Acute Cardiovascular Care will establish a common basis of knowledge and a uniform and improved quality of care across the field.

Pediatric Heart Failure Lippincott Williams & Wilkins

This issue of Heart Failure Clinics, guest edited by Giovanni Esposito and Michinari Hieda, will cover key topics in Cardiovascular Emergencies. This is part one of a two-part issue and is one of four issues selected each year by our series consulting editor, Dr. Eduardo Bossone. Topics discussed in this issue will include: Case Report in the ER, Case Report in the ICU, Acute and Chronic Effects of Cancer Drugs on the Cardiovascular System, Acute Mitral Regurgitation and Mitral Clip in an Emergency Case, Acute Decompensated Heart Failure in Patients with Heart Failure with Reduced Ejection Fraction, Echocardiography Tips in the ER, Acute Myocardial Infarction in Left Main Trunk, Complicated Advanced Heart Failure, Palliative Care in Patients with Advanced Heart Failure, among others.

Acute Heart Failure Elsevier Health Sciences

The first book of its kind, this reference describes current diagnostic and treatment strategies for acute and chronic heart failure in the fetus, neonate, child, and young adult-encompassing every aspect of pediatric heart failure including historical perspectives, the latest technologies in mechanical circulatory support, and recent information on the psychosocial aspects of heart failure in children.

Nomenclature and Criteria for Diagnosis of Diseases of the Heart and Great Vessels Elsevier Health Sciences

This guideline covers diagnosing and managing acute heart failure or possible acute heart failure in people aged 18 and over. It aims to improve the immediate care of someone who is acutely unwell as a result of heart failure.

Cardiovascular Emergencies, Part I, An Issue of Heart Failure Clinics Remedica

One of the most time-consuming tasks in clinical medicine is seeking the opinions of specialist colleagues. There is a pressure not only to make referrals appropriate but also to summarize the case in the language of the specialist. This book explains basic physiologic and pathophysiologic mechanisms of cardiovascular disease in a straightforward manner, gives guidelines as to when referral is appropriate, and, uniquely, explains what the specialist is likely to do. It is ideal for any hospital doctor, generalist, or even senior medical student who may need a cardiology opinion, or for that matter.

Heart Failure Acute Heart Failure

For many years, there has been a great deal of work done on chronic congestive heart failure while acute heart failure has been considered a difficult to handle and hopeless syndrome. However, in recent years acute heart failure has become a growing area of study and this is the first book to cover extensively the diagnosis and management of this complex condition. The book reflects the considerable amounts of new data reported and many new concepts which have been proposed in the last 3-4 years looking at the epidemiology, diagnostic and treatment of acute heart failure.

Acute Heart Failure Springer Science & Business Media

Acute heart failure is a potentially life threatening situation where correct, rapid therapy can save lives. Information from the latest research and studies has been used to update this text to bring the latest understanding of the pathophysiology together with a practical guide to diagnosis and management using an evidenced based approach. Since the first edition of Acute Heart Failure, this research has brought to light three important issues to be integrated into a second edition. First, the so-called "vascular heart failure" has been identified as a common and decisive mechanism provoking acute heart failure due to the coupling and interaction between the heart (right and left heart) and the large vessel systems (aorta and pulmonary artery). Second, the interaction and cross-talk between heart and kidneys, the so-called 'cardiorenal syndrome' has been identified as another feature of acute heart failure syndromes. Third, we have new knowledge and updated points of views about the development of pulmonary hypertension in patients suffering from heart failure, the group 2 of the classification system of pulmonary hypertension. These are all covered in this second edition. This revision to a seminal text is a valuable addition to any practitioner who treats patients with acute heart failure and wants a

deeper understanding of the condition.

Management of Acute Decompensated Heart Failure Jaypee Brothers Medical Publishers

This book systematically focuses on central sleep apneas, analyzing their relationship especially with heart failure and discussing recent research results and emerging treatment strategies based on feedback modulation. The opening chapters present historical background information on Cheyne-Stokes respiration (CSR), clarify terminology, and explain the mechanics and chemistry of respiration. Following a description of the physiology of respiration, the pathophysiology underlying central apneas in different disorders and particularly in heart failure is discussed. The similarities and differences of obstructive and central apneas are then considered. The book looks beyond the concept of sleep apnea to daytime CSR and periodic breathing during effort and contrasts the opposing views of CSR as a compensatory phenomenon or as detrimental to the failing heart. The diagnostic tools currently in use for the detection of CSR are thoroughly reviewed, with guidance on interpretation of findings. The book concludes by describing the various forms of treatment that are available for CSR and by explaining how to select patients for treatment.

The Breathless Heart John Wiley & Sons

Now thoroughly revised and updated -- and with many renowned new contributors -- the Second Edition of this highly acclaimed text is the most complete, current, and authoritative reference on congestive heart failure. The book is written by the leaders in the field and covers every aspect of congestive heart failure, from molecular and cellular biology to pathophysiology, diagnosis, and treatment. This edition reflects numerous major developments in the study of the pathogenesis of heart failure and in therapy. The timely coverage also includes cost-effectiveness issues in diagnosis and treatment, as well as a greater emphasis on clinical epidemiology. Nine entirely new chapters focus on key areas such as progression from left ventricular hypertrophy to heart failure; remodeling of the heart after myocardial infarction; cardiac interstitium and its role in the pathogenesis of heart failure; cytokine activity; management of atrial arrhythmias; and surgical treatment of heart failure.

Oxford Textbook of Heart Failure Springer Science & Business Media

Withering demonstrated 200 years ago in the year 1784 that "drop sy" could be successfully treated with foxglove extracts. This discovery eventually led to the scientifically based treatment of heart failure with chemically defined digitalis glycosides. In Germany, particularly, the usefulness of this development was greatly exaggerated and often resulted in the indiscriminate use of digitalis for patients with coronary artery disease and its complications. Today, this type of drug intervention is used more sparingly. At the same time, other therapeutic concepts were introduced, particularly that of drug-induced diuresis and the concept of vasodilation. This book is the result of a systematic study of various therapeutic approaches for the management of heart failure and includes clinical, experimental and theoretical aspects. For more than a decade, various therapeutic modalities have been clinically evaluated in the setting of acute heart failure managed in the intensive care unit as well as chronic heart failure for inpatient and outpatient therapy. Experience has shown that in certain clinical situations, particularly the management of acute disease, specific, individual drug intervention is required and is based on the underlying etiology for heart failure. However, in chronic heart failure, long-term success can only be achieved by the rational combination of treatment modalities. The present text is aimed at providing the clinically and scientifically oriented physician with the pathophysiologic and pharmacologic background necessary to place into perspective the therapeutic efforts for the management of heart failure.

Acute Heart Failure Springer

Acute heart failure is a potentially life threatening situation where correct, rapid therapy can have a life saving impact. In this rapidly changing area of medicine this text aims to bring the latest understanding of the pathophysiology together with a practical guide to diagnosis and management using a thoroughly evidence based approach. This will appeal to a wide audience of health care professionals who will treat patients with acute heart failure, including doctors, medical students, nurses, and other professionals in the Emergency Department, General Internal Medicine, Anaesthetics, Cardiology (Medicine and Surgery) and Critical Care settings. It may be used as an evidence based guide for the junior practitioner or as an aide-memoire for the more senior. Always keeping the underlying pathophysiology at the forefront of the discussion, the reader is encouraged to understand the aetiology of the acute situation and how to direct management in order to correct the abnormal physiology. Each chapter is heavily referenced allowing the reader to easily refer to the original experimental studies and pursue topics in more detail if required. This text is a valuable addition to any practitioner who treats patients with acute heart failure and wants a deeper understanding of the condition.

Short Stay Management of Heart Failure Springer

Although the majority of heart failure represents the exacerbation of chronic disease, about 20% will present as a first time diagnosis. And although there are a number of intravenous agents that can be used for acute decompensated heart failure, there are no national guidelines currently available. Edited by a well-known expert and his team of colleagues.

MGH Cardiology Board Review Springer

Coronary heart disease (CHD) is the leading cause of death worldwide with 3.8 million men and 3.4 million women dying each year. Cardioprotection refers to the prevention of CHD and the clinical improvement in patients suffering from cardiovascular problems. This book focuses on the role of cardioprotection in surgery and the use of pharmacological therapies such as ACE-inhibitors, statins and beta-blockers in order to reduce the myocardial injury sustained by the patient and the significant risk of morbidity and mortality. It includes new cardioprotective strategies aimed at improving the clinical outcomes of patients in these settings, as well as current well-established methods for reducing myocardial injury in acute coronary syndrome patients.
