## **METHODOLOGIES AND PRACTICES**

Springer Nature

This book explores the ways in which criminological methods can be imaginatively deployed and developed in a world increasingly characterized by the blurred nature of social reality. Whilst recognizing the importance of positivist approaches and research techniques, it advocates a commitment to understanding the ways in which those techniques can be used imaginatively, at times in combination with less conventional methods, discussing the questions concerning risk, ethics and access that arise as a result. Giving voice to cutting edge research practices both in terms of concepts and methods that shift the criminological focus towards the kind of imaginative work that comprised the foundations of the discipline, it calls into question the utility and credentials of mainstream work that fails to serve the

discipline itself or the policy questions allied to it. A call not to 'give up on numbers' but also not to be defined by statistics and the methods that produce them, *Liquid Criminology* sheds light on a way of doing research for criminology that is not only creative but also critical. As such, it will appeal to scholars of sociology, criminology and social policy with interests in research methods and design.

Most approaches to crime analysis focus on geographical crime mapping, which is helpful in identifying crime clusters and allocating police resources, but does not explain why a particular crime took place. *Applied Crime Analysis* presents a model that brings statistical anchoring, behavioral psychopathology, and victimology from the social sciences together with physical and crime scene evidence to provide a complete picture of

crime. This hands-on guide takes theoretical principles and demonstrates how they can be put into practice using real case examples. In addition to covering key topics such as staged crime scenes, false reports, and criminal motivations, the book's includes a final chapter on report writing, showing readers how to use their findings to successfully advance to prosecution and succeed in court. Presents a model that takes social science concepts, including statistical anchoring, behavioral psychopathology, and victimology and connects them with crime scene evidence to examine and analyze crime. Puts crime analysis theory into practice with real-world examples highlighting important concepts and best practice. Includes a report writing chapter to demonstrate how this approach can strengthen criminal cases and succeed in court. Instructor materials include a Test Bank, Powerpoint lecture slides, and Instructor's Guide for each chapter. *The Oxford Textbook on Criminology* SAGE Provides complete coverage of the use and results of the contemporary methods employed in criminology and criminal justice research today.

Neurocriminology: Forensic and Legal Applications, Public Policy Implications explores the dramatic impact of advances in neuroscience research and practice to our present understanding of criminality and crime control. Contemporary, cutting-edge research in neuroscience is cited and explained. Studies and cases are clearly and concisely outlined with potential uses for practical applications detailed. This will be framed in the context of criminological foundations, theory, and the notion of the nature of crime itself. This comprehensive and engaging book also delves into recent developments in modern neurology, and

connections between neuroscience and its criminal, legal, and forensic implications and ramifications. The book poses various questions about what insight neurology can provide to human cognition, to motivation and—in particular—criminal motivation. From biological observations is there a pattern, or are there similarities, in what the brain scan of a criminal looks like? What are the treatment implications and are their valid assessments or treatments that can be used in a corrections environment to curb, or even modify, behavior definitively? And, ultimately, what are the moral, legal and social implications of all? Coverage throughout incorporates leading research that links neurological and biological factors to heightened risk for criminality. This includes coverage of suboptimal arousal (low heart rate), testosterone, neurotransmitters, and variations in MAOA—the so-called "warrior gene"—and more. Neurocriminology will offer a thought-provoking analysis of the broad-reaching implications of this science to better inform the prevention, investigation, monitoring, and control of crime. This includes the remarkable

potential for neuroscience to serve as a resource and potential tool to criminology and penology researchers, psychologists, forensic psychologists, forensic scientists, legal professionals, and investigators of crime and criminal behavior.

This book provides step-by-step

instructions on how to analyze text generated from in-depth interviews and focus groups, relating predominantly to applied qualitative studies. The book covers all aspects of the qualitative data analysis process, employing a phenomenological approach which has a primary aim of describing the experiences and perceptions of research participants. Similar to Grounded Theory, the authors' approach is inductive, content-driven, and searches for themes within textual data. CRC Press

Presents state-of-the-art research and teaching into the study of corruption and those affected by it. Analyzes the benefits and disadvantages of various teaching methodologies in universities, police academies, and crime victim services.

21st Century Criminology: A Reference Handbook provides straightforward and definitive overviews of 100 key topics comprising traditional criminology and its modern outgrowths. The individual chapters have been designed to serve as a "first-look" reference source for most criminological inquiries. Both connected to

the sociological origins of criminology (i.e., theory and research methods) and the justice systems' response to crime and related social problems, as well as coverage of major crime types, this two-volume set offers a comprehensive overview of the current state of criminology. From student term papers and masters theses to researchers commencing literature reviews, 21st Century Criminology is a ready source from which to quickly access authoritative knowledge on a range of key issues and topics central to contemporary criminology.

CRIMINOLOGY. Thorough. Engaging. Distinctive. Criminology is a core, introductory textbook that takes students further. From the first chapter, students are encouraged to regard themselves as producers of criminological knowledge. Starting from the basics, the book takes students on a journey through the subject. This begins with what crime is and the theories that try to explain it, through society's response to crime, and ultimately

to how to carry out independent research and plan first steps in a career. The critical, applied approach is emphasized through some of the many features that are integrated throughout the book. These include conversations with authentic voices from the field, compelling personal insights from the authors, and challenges to students to question assumptions, apply knowledge and critically reflect on their personal viewpoints. The ultimate goal behind Criminology is a bold, important, and ambitious one. Both student-focused and research engaged, the purpose of the book is to contribute towards producing the next generation of criminologists who are switched-on, excited, active, and - above all - critical. Online Resource Centre: Criminology is accompanied by an Online Resource Centre containing the following resources: \* Selected further readings and web links \* Over 100 multiple choice questions \* Advice on 'decoding' academic articles \* Numerous time-saving resources for teaching staff

**Social Planning for Crime Control** Trotman Education

INTRODUCTION: There is no society without the issue of crime and criminals.

The idea of crime is basically worried with the social order. Man is accepted to have developed from primate like progenitor. With the development of man has advanced his psyche and thinking. Man began utilizing the crude leaves, bugs and creatures as his food. Afterward, on revelation of fire, he discovered that food was more delectable when cooked. He utilized creature skin to cover his body. He remained in caverns to shield himself from the extremities of the climatic condition.

Practicing Forensic Criminology McGraw-Hill Education

The science of criminology is at a crossroads. Despite accumulating a dizzying array of facts about crime, the field has yet to identify a body of theories that allows for the adequate prediction, explanation, and control of phenomena of central interest to criminologists. Mechanistic Criminology locates this problem within the field's failure to conform to the expectations of scientific fields and reliance on antiquated methods of theory construction. The authors contend that this failure has resulted in an inability of criminologists to engage in theory falsification and competition—two

central activities of science—that produce the forms of reliable knowledge that are unique to scientific fields. Mechanistic Criminology advocates for the adoption of a mechanistic mode of theorizing to allow criminologists to engage in theory falsification and competition and ignite rapid scientific discovery in the field. The proposed method is the same one employed within the biological sciences, which is responsible for their rapid scientific progress in the late twentieth and early twenty-first centuries. Should criminologists adopt this mechanistic approach, criminology could experience the same scientific revolution that is occurring in the biological sciences, and criminologists would generate the knowledge necessary for the prediction, explanation, and control of crime.

Applied criminology - international SAGE Publications

This innovative and timely work explores how the developmental criminology paradigm can be applied to understandings beyond criminal careers, to the development of more general antisocial behavior. Importantly, the rich data set from 50-years of cross sectional

and longitudinal studies provides replication amongst samples, genders, generations and phases in the life span, from cohorts born in the 1960s, 1970s, 1980s, and 1990s. This work also provides a rich history about the development of the “Developmental Criminology” paradigm, drawing from developmental psychology, and life-course methodologies in Sociology. With a 50-year, multigenerational longitudinal dataset (the Montreal Two Sample Four Generational Cross sectional and Longitudinal Studies -MTSFGCLS) the author explores the mechanisms of official and self-reported antisocial behavior. It provides insights into not only criminal behavior, but other types of potentially problematic behavior, including drug and alcohol use, risky sexual behavior, conflict with authority and other forms of antisocial behavior; as well as their decline across the life-course. By examining the developmental mechanisms and trajectories of these behaviors, the author proposes a multidisciplinary theory to explain these phenomena. This work will be of interest to researchers in Criminology, Sociology and Psychology, particularly

within the growing area of Developmental and Life-Course Criminology, as well as related fields such as social work, public health and public policy.

Written by an internationally renowned authority in the field, the founder of the highly regarded School of Criminology at Simon Fraser University, the book draws heavily on research done on three Continents: North America, Europe and

Australia, to trace the discipline's historical evolution, its current problems, disappointing achievements, and promising trends. It concludes with a

prospective look at the future of criminology and criminology of the future. Although the perspective is critical, the author's critique is constructive and he expresses a healthy optimism about the

discipline's future and offers several guidelines as to how current deficiencies could be remedied and present gaps could be addressed.
