What's wrong with buying

regular coffee? Does Fair Trade necessarily mean ethical trade? What impact can consumers have on global economics? Fair Trade: A Beginner's Guide reveals why Fair Trade means more than just bananas, coffee, and chocolate.

Author and activist Jacqueline DeCarlo explains the principles behind Fair Trade and its development into a powerful economic tool. Packed with inspiring ways to make a difference, this book will encourage readers of all

backgrounds to help end poverty, environmental destruction, and human exploitation.

THE HANDBOOK OF GLOBAL MEDIA AND COMMUNICATION POLICY

CRC Press

After the first power plant in history was commissioned for commercial operation by Thomas Edison on Pearl Street in New York in 1882, electricity was sold as a consumer product at market prices. After a period of rapid

development, electricity had become such a fundamental product that regulation was believed to be necessary. Since then, the power industry had been considered a natural monopoly and undergone periods of tight regulation. Deregulation started in the early 1980s and as a result, most developed countries run their power industries using a market approach. With the theories and rules of electricity markets developing rapidly, it is often difficult for beginners to start

learning and difficult for those in the field to keep up. Bringing together information previously scattered among various journals and scholarly articles, *Electricity Markets and Power System Economics* provides a comprehensive overview of the current state of development in the electricity market. It introduces the fundamental principles of power system operation so that even those with a basic understanding can benefit from the book. The book includes a series

of consistent mathematical models of market operation of power systems, and original cases with solutions. Systematically describing the basic building blocks of electricity market theory, the book provides a guide to underlying theory and mainstream market rules. The Publishers' Trade List Annual Univ of California Press

THE SERIES: FRONTIERS IN COMPUTATIONAL INTELLIGENCE The series Frontiers In Computational

Intelligence is envisioned to provide comprehensive coverage and understanding of cutting edge research in computational intelligence. It intends to augment the scholarly discourse on all topics relating to the advances in artificial life and machine learning in the form of metaheuristics, approximate reasoning, and robotics. Latest research findings are coupled with applications to varied domains of engineering and computer sciences. This field is

steadily growing especially with the advent of novel machine learning algorithms being applied to different domains of engineering and technology. The series brings together leading researchers that intend to continue to advance the field and create a broad knowledge about the most recent research. Series Editor Dr. Siddhartha Bhattacharyya, CHRIST (Deemed to be University), Bangalore, India Editorial Advisory Board Dr. Elizabeth

[A Beginner's Guide to Building Better Worlds](#)
 John Wiley & Sons

What is blockchain? What

is Bitcoin? How can central banks be instrumental in guiding a nation's economy? What are the underlying causes of trade deficits? Do trade wars actually help the domestic economy? How has the behavior of millennials and Generation Z affected the global economy? Find out all this and more in this definitive guide to the world economy. As the global economic landscape shifts at an increasing rate, it's more important than ever that citizens understand the

building blocks of the new world economy. In this lively guide, Randy Charles Epping cuts through the jargon to explain the fundamentals. In thirty-six engaging chapters, Epping lays bare everything from NGOs and nonprofits to AI and data mining. With a comprehensive glossary and absolutely no graphs, *The New World Economy: A Beginner's Guide* is essential reading for anyone who wants to understand what is going on in the world around them. This timely book is

a vital resource for today's chaotic world.

Climate Change Starter's Guidebook

Simon and Schuster
One of the most important yet least understood organizations in the world, the WTO is a lynchpin of globalization, allowing us to enjoy products and services from around the globe. However, it also lays bare the frailty of many industries, leading some to claim that it stokes unemployment and harms the developing world. In this engaging introduction, David Collins

examines the goals of the WTO and the difficulties experienced by member countries struggling to adapt to the pressures of globalization. Refuting the argument that the WTO should expand its mandate to cover wider social issues, Collins demonstrates how this would confuse the organization's primary objective - to liberalize international trade. With case studies straight from the headlines and clear explanations of complex issues like regional trade agreements and currency

manipulation, this lucid exposition is an essential insight into what the WTO does and how it fits into the world we know.

Resources in Education

Blockchain 3.0 for Sustainable Development
This Ultimate Beginner's Guide will Teach You How to Invest in the Futures Market With Great Returns! Do you want to learn how to make money online through investments? Have you always been interested in trading and futures markets? INVESTMENT IS A LONG GAME WHICH

BRINGS MANY BENEFITS
SMART PLAYERS. WITH
THIS BOOK, YOU TOO CAN
JOIN THE MARKET!

Futures contracts, or simply futures, are agreements made between two parties to sell something at a predetermined price sometime in the future. These types of contracts were first used in agriculture - the first traded commodity was corn! Today, people can use futures to trade currencies, interest rates and stock market indexes. Blossoming of the futures

market has attracted many, and with reason. Those who learn the ins and outs of futures trading stand to make a lot of money, even from their own homes. Once you master the psychology, risk management and the best trading techniques, you can start seeing some return on investment on the futures and securities market! This book will teach you about: How to trade futures What different types of securities are there Principles and history of

futures trading How to make a profit on the futures market Technical and fundamental analysis process Bitcoin and other cryptocurrencies How to manage your money Trading psychology and how to become successful as a trader Risk management Even if you're a complete beginner in the world of finance and money, this book will be easy to understand. It's written in simple and detailed language, helping everyone get a jump-start on futures trading. And if

you've been dancing around the idea of being your own boss and making money on the markets, this book will help you take that next step. Knowledge is power, and there is nothing more powerful than someone who knows how to make money on the markets!

KIPLINGER'S PERSONAL FINANCE

Network Professional's Library
The Oxford Handbook of Computational Economics and Finance provides a survey of both the

foundations of and recent advances in the frontiers of analysis and action. It is both historically and interdisciplinarily rich and also tightly connected to the rise of digital society. It begins with the conventional view of computational economics, including recent algorithmic development in computing rational expectations, volatility, and general equilibrium. It then moves from traditional computing in economics and finance to recent developments in natural computing,

including applications of nature-inspired intelligence, genetic programming, swarm intelligence, and fuzzy logic. Also examined are recent developments of network and agent-based computing in economics. How these approaches are applied is examined in chapters on such subjects as trading robots and automated markets. The last part deals with the epistemology of simulation in its trinity form with the integration of simulation, computation, and

dynamics. Distinctive is the focus on natural computationalism and the examination of the implications of intelligent machines for the future of computational economics and finance. Not merely individual robots, but whole integrated systems are extending their "immigration" to the world of Homo sapiens, or symbiogenesis.

The Small Arms Trade

UNESCO Publishing

Although negotiation still lies at the heart of international commercial agreements, much of the

detail has migrated to the Internet and has become part of electronic commerce. This incomparable one-volume work??now in its sixth edition??with its deeply informed emphasis on both the face-to-face and electronic components of setting up and performing an international commercial agreement, stands alone among contract drafting guides and has proven its enduring worth. Following its established highly practical format, the book's much-appreciated

precise information on a wide variety of issues??including those pertaining to intellectual property, alternative dispute resolution, and regional differences??is of course still here in this new edition. There is new and updated material on such matters as the following: • the need for contract drafters to understand and to use the concepts of "standardization" (i.e., the work of the International Organization for Standardization (ISO) as a contract drafting tool); •

new developments and technical progress in e-commerce; • new developments in artificial intelligence in contract drafting; • the possible use of electronic currencies such as Bitcoin as a payment device; • foreign direct investment; • special considerations inherent in drafting licensing agreements; • online dispute resolution including the innovations referred to as the “robot” arbitrator; • changes in the arbitration rules of major international organizations; and •

assessment of possible future trends in international commercial arrangements. Each chapter provides numerous references to additional sources, including a large number of websites. Materials from and citations to appropriate literature in languages other than English are also included. In its recognition that a business executive entering into an international commercial transaction is mainly interested in drafting an agreement that satisfies

all of the parties and that will be performed as promised, this superb guide will immeasurably assist any lawyer or business executive to plan and carry out individual transactions even when that person is not interested in a full-blown understanding of the entire landscape of international contracts. Business executives who are not lawyers will find that this book gives them the understanding and perspective necessary to work effectively with the legal experts.

Blockchain 3.0 for Sustainable DevelopmentWalter de Gruyter GmbH & Co KG
Optical Networking: A Beginners Guide Oxfam
Energy efficiency and low-carbon technologies are key contributors to curtailing the emission of greenhouse gases that continue to cause global warming. The efforts to reduce greenhouse gas emissions also strongly affect electrical power systems. Renewable sources, storage systems, and flexible loads provide new system controls, but

power system operators and utilities have to deal with their fluctuating nature, limited storage capabilities, and typically higher infrastructure complexity with a growing number of heterogeneous components. In addition to the technological change of new components, the liberalization of energy markets and new regulatory rules bring contextual change that necessitates the restructuring of the design and operation of future energy systems.

Sophisticated component design methods, intelligent information and communication architectures, automation and control concepts, new and advanced markets, as well as proper standards are necessary in order to manage the higher complexity of such intelligent power systems that form smart grids. Due to the considerably higher complexity of such cyber-physical energy systems, constituting the power system, automation, protection, information and

communication technology (ICT), and system services, it is expected that the design and validation of smart-grid configurations will play a major role in future technology and system developments. However, an integrated approach for the design and evaluation of smart-grid configurations incorporating these diverse constituent parts remains evasive. The currently available validation approaches focus mainly on component-oriented

methods. In order to guarantee a sustainable, affordable, and secure supply of electricity through the transition to a future smart grid with considerably higher complexity and innovation, new design, validation, and testing methods appropriate for cyber-physical systems are required. Therefore, this book summarizes recent research results and developments related to the design and validation of smart grid systems.

ENERGY POSITIVE NEIGHBORHOODS AND SMART ENERGY DISTRICTS

Edward Elgar Publishing
This book is a primer on media governance at a global level and the key influencing forces and organizations, such as ITU, WTO, UNESCO, WIPO, and ICANN. Anyone interested in the media and its progressively rising influence over so many dimensions of society can look here for an introduction to media regulation, governance

structures, and trends.

Self-Organizing Systems
Simon and Schuster
A comprehensive, accessible guide to understanding today's global economy, from the author of the bestselling *A Beginner's Guide to the World Economy*. While reporting on today's world, business and mainstream media alike use terms and mention trends that even the savviest consumer may find baffling. In his latest book, Randy Charles

Epping uses compelling narratives and insightful analogies to clearly and concisely explain the rapidly changing way business is done in the twenty-first century, without a single chart or graph. Epping defines key ideas and commonly used words and phrases like carbon footprint, WTO, economy of scale, NAFTA, and outsourcing. He also illustrates how central banks help navigate global crises and drive the global economy, discusses the benefits of Green Economics, shows

how trade wars can be avoided, and explains the virtual economy, where multimillion dollar transactions take place in the blink of an eye. Complete with 89 easy-to-master tools for surviving and thriving in the new global marketplace and an extensive glossary, *The 21st Century Economy: A Beginner's Guide* is essential reading for anyone interested in understanding the complex economy of the world in which we live. Policy Press
This book constitutes the refereed proceedings of the 14th Industrial Conference on Advances in Data Mining, ICDM 2014, held in St. Petersburg, Russia, in July 2014. The 16 revised full papers presented were carefully reviewed and selected from various submissions. The topics range from theoretical aspects of data mining to applications of data mining, such as in multimedia data, in marketing, in medicine and agriculture and in

process control, industry and society.
Middle East 101 Springer
The Handbook of Global Media and Communication Policy offers insights into the boundaries of this field of study, assesses why it is important, who is affected, and with what political, economic, social and cultural consequences. Provides the most up to date and comprehensive collection of essays from top scholars in the field Includes contributions from western and eastern

Europe, North and Central America, Africa and Asia Offers new conceptual frameworks and new methodologies for mapping the contours of emergent global media and communication policy Draws on theory and empirical research to offer multiple perspectives on the local, national, regional and global forums in which policy debate occurs

Forex Made Simple

Rowman & Littlefield Publishers

In 75 clear and engaging entries, Epping explains

the concepts readers hear discussed on every evening's news and that have an intimate bearing on their lives and livelihoods. From quotas to subsidies to the WTO, from tax havens to currency options, this timely book offers a fountainhead of vital information, presented simply but never simplistically--and without a single graph.

FROM POVERTY TO POWER, 2ND EDITION

Vintage

Offers a look at the

causes and effects of poverty and inequality, as well as the possible solutions. This title features research, human stories, statistics, and compelling arguments. It discusses about the world we live in and how we can make it a better place.

From Poverty to Power

argues that a radical redistribution of power, opportunities, and assets rather than traditional models of charitable or government aid is required to break the

cycle of poverty and inequality. The forces driving this transformation are active citizens and effective states. Published in association with Oxfam GB.

Fair Trade Kluwer Law International B.V.

As the U.S. strives to establish democracy in Iraq and contemplates its own democratic system in the wake of a series of controversial presidential elections, David Beetham offers new insights into democracy. He looks at real examples such as the

role of the citizen and how large corporations affect democracy as well as contemplating the future of democracy in the developed and developing worlds.

Handbook on Electricity Markets Naval Institute Press

Today, more than ever, we live in a global world. Whether it's war, economics, politics, or law, our lives are influenced by a complex web of cross-border transactions. Dr Charles Jones ably provides the building blocks to

understand these interactions, outlining the competing theories that attempt to explain them. Arguing that the strength of International Relations lies in its contradictions – it's not a single discipline but a fascinating mess of history, politics, economics, sociology, law, anthropology, and cultural studies – he provides a lively discussion of the limitations of the field, but also why it is so essential. Covering conflict, history, and theory, and with a major focus on the global economy, this is the

perfect primer for aspiring students of International Relations, workers in an international context, and citizens across the globe.
