The disadvantages of NIV vary from leakage, which makes the treatment less reliable, to discomfort and pressure ulcers. The Non Invasive Ventilation; PROs and CONs The non-cardiopulmonary effects of positive pressure ventilation include raised intracranial pressure, water retention, sodium retention, decreased renal perfusion, decreased hepatic perfusion, decreased intestinal motility and poor gastric emptying, increased risk of stress ulceration, neutrophil retention in the pulmonary capillaries and impaired lymphatic drainage from the lungs. Advantages and limitations of non-invasive ventilation ... Noninvasive ventilation (NIV) refers to the administration of ventilatory support without using an invasive artificial airway (endotracheal tube or tracheostomy tube).
