Fernando Castillo de la Torre and Eric Gippini Fournier, two of the most experienced competition litigators at the European Commission, undertake an in-depth analysis of the case law of the EU Courts on the rules of evidence, proof and judicial review, as they are applied in EU competition law. These topics often engage with fundamental rights, and the book takes stock of the most frequent criticisms that are made of the EU enforcement system and review by EU Courts. The result is an extremely thorough and well-structured review of the relevant rules of law and of the precedents. The authors combine valuable insights and critical analysis to construct a definitive yet balanced portrayal of the state of EU competition law.

Making a Difference in Education Routledge

Given the current climate of results-driven accountability, school-based professionals have a significant contribution to make in improving the impact of programs and initiatives through the application of program evaluation methods and tools to inform decision making within a multi-tier system of supports framework. And yet there is currently a dearth of practical resources dedicated to developing school psychologists' competencies in program evaluation. *Advancing Evidence-Based Practice through Program Evaluation* will meet the needs of school psychologists and other school-based professionals seeking to use program evaluation approaches to enhance data-based decision making and accountability at a program and systems-level. This practical guide provides the most cutting-edge evaluation frameworks, methods, and tools available, with particular emphasis on the rapidly-developing areas of implementation research, evidence-based

professional learning, and innovative approaches to communicating evaluation findings. The book will support school professionals in daily practice by enhancing and extending their knowledge and skills in measurement, assessment, consultation for systems change and the use of evidence-based interventions for academic and social/behavioral concerns, with a focus on evaluating the implementation and outcomes of school-based programs. The book will also facilitate the professional development of those currently engaged in graduate preparation programs in education, educational leadership, school counseling, and school social work, as well as the university faculty who guide their professional preparation. Finally, school professionals may also use *Advancing Evidence-Based Practice through Program Evaluation* to develop their professional competencies in implementing new initiatives funded by grants with clear expectations for program evaluation.

Handbook of Contemporary Behavioral Economics M.E. Sharpe

Digital technologies are a key feature of contemporary education. Schools, colleges and universities operate along high-tech lines, while alternate forms of online education have emerged to challenge the dominance of traditional institutions. According to many experts, the rapid digitization of education over the past ten years has undoubtedly been a 'good thing'. Is Technology Good For Education? offers a critical counterpoint to this received wisdom, challenging some of the central ways in which digital technology is presumed to be positively affecting education. Instead Neil Selwyn considers what is being lost as digital technologies become ever more integral to education provision and engagement. Crucially, he questions the values, agendas and interests that stand to gain most from the rise of digital education. This concise, up-to-the-minute analysis concludes by considering alternate approaches that might be capable of rescuing and perhaps revitalizing the ideals of public education, while not denying the possibilities of digital technology altogether.

Contemporary Policy Beyond Ideology John Wiley & Sons

What is working in education in the UK - and what isn't? This book offers a highly readable guide to what the latest research says about improving young people's outcomes in pre-school, primary and secondary education. Never has this issue been more topical as the UK attempts to compete in the global economy against countries with increasingly educated and skilled work-forces. The book discusses whether education policy has really been guided by the evidence, and explores why the failings of Britain's educational system have been so resistant to change, as well as the success stories that have emerged. *Making a Difference in Education* looks at schooling from early years to age 16 and entry into Further Education, with a special focus on literacy, numeracy and IT. Reviewing a large body of research, and paying particular attention to findings which are strong enough to guide policy, the authors examine teacher performance, school quality and accountability, and the problematically large social gap that still exists in state school education today. Each chapter concludes with a summary of key findings and key policy requirements. As a comprehensive research review, *Making a Difference in Education* should be essential reading for faculty and students in education and social policy, and of great interest to teachers and indeed to anyone who wants to know about the effectiveness of UK education policy and practice, and where they should be going.

Making a Difference? Routledge

Discover how conservation can be made more effective through strengthening links between science research, policy and practice. This title is also available as Open Access on Cambridge Core.

CONSERVATION RESEARCH, POLICY AND PRACTICE

Routledge

A productive society is dependent upon high-performing government. This third edition of *The Public Performance and Productivity Handbook* includes chapters from leading scholars,

consultants, and practitioners to explore all of the core elements of improvement. Completely revised and focused on best practice, the handbook comprehensively explores managing for high performance, measurement and analysis, costs and finances, human resources, and cutting-edge organizational tools. Its coverage of new and systematic management approaches and well-defined measurement systems provides guidance for organizations of all sizes to improve productivity and performance. The contributors discuss such topics as accountability, organizational effectiveness after budget cuts, the complementary roles of human capital and “big data,” and how to teach performance management in the classroom and in public organizations. The handbook is accompanied by an online companion volume providing examples of performance measurement and improvement manuals across a wide variety of public organizations. The Public Performance and Productivity Handbook, Third Edition, is required reading for all public administration practitioners, as well as for students and scholars interested in the state of the public performance and productivity field.

EVIDENCE-BASED MANAGEMENT

Corwin

The social sector provides services to a wide range of people throughout the world with the aim of creating social value. While doing good is great, doing it well is even better. These organizations, whether nonprofit, for-profit, or public, increasingly need to demonstrate that their efforts are making a positive impact on the world, especially as competition for funding and other scarce resources increases. This heightened focus on impact is positive: learning whether we are making a difference enhances our ability to address pressing social problems effectively and is critical to wise stewardship of resources. Yet demonstrating efficacy remains a big hurdle for most organizations. The Goldilocks Challenge provides a parsimonious framework for measuring the strategies and impact of social sector organizations. A good data strategy starts first with a sound theory of change that helps organizations decide what elements they should monitor and measure. With a theory of change providing solid underpinning, the Goldilocks framework then puts forward four key principles, the CART principles: Credible data that are high quality and analyzed appropriately, Actionable data will actually influence future decisions; Responsible data create more benefits than costs; and Transportable data build knowledge that can be used in the future and by others. Mary Kay Gugerty and Dean Karlan combine their extensive experience working with nonprofits, for-profits and government with their understanding of measuring effectiveness in this insightful guide to thinking about and implementing evidence-based change. This book is an invaluable asset for nonprofit, social enterprise and government leaders, managers, and funders—including anyone considering making a charitable contribution to a nonprofit—to ensure that these organizations get it “just right” by knowing what data to collect, how to collect it, how it can be analyzed, and drawing implications from the analysis. Everyone who wants to make positive change should focus on the top priority: using data to learn, innovate, and improve program implementation over time. Gugerty and Karlan show how.

MAKING A DIFFERENCE

Springer

This volume presents distinctive, innovative models of teacher education from Australia, discusses their successful elements and considers possibilities for successful teacher education in the twenty-first century. Each model is couched within the international teacher education concerns of the theory practice nexus, school-university partnerships, reflective practice, and the role of technology. The contributing authors, drawn from different contexts and locations around Australia, each offers research-based perspectives on successful teacher education. Responses to teacher education challenges in rural and regional contexts, metropolitan areas, among low socio-economic populations and Indigenous communities are considered. Ways in which technology, and in particular mobile technology, can be used to support learning across these diverse contexts are illustrated, as is the role of reflective practice to encourage critical reflection for improving teacher learning. Collectively, the authors present a range of directions that can guide the future of teacher education both nationally and internationally, demonstrating that context, partnerships, reflection and technology are critical elements in the provision of successful teacher education. [Making a Difference : an Evidence-based Group Programme to Offer Cognitive Stimulation Therapy \(CST\) to People with Dementia](#) : the Manual for Group Leaders Corwin Press

This book addresses controversies concerning the epistemological foundations of data science: Is it

a genuine science? Or is data science merely some inferior practice that can at best contribute to the scientific enterprise, but cannot stand on its own? The author proposes a coherent conceptual framework with which these questions can be rigorously addressed. Readers will discover a defense of inductivism and consideration of the arguments against it: an epistemology of data science more or less by definition has to be inductivist, given that data science starts with the data. As an alternative to enumerative approaches, the author endorses Federica Russo’s recent call for a variational rationale in inductive methodology. Chapters then address some of the key concepts of an inductivist methodology including causation, probability and analogy, before outlining an inductivist framework. The inductivist framework is shown to be adequate and useful for an analysis of the epistemological foundations of data science. The author points out that many aspects of the variational rationale are present in algorithms commonly used in data science. Introductions to algorithms and brief case studies of successful data science such as machine translation are included. Data science is located with reference to several crucial distinctions regarding different kinds of scientific practices, including between exploratory and theory-driven experimentation, and between phenomenological and theoretical science. Computer scientists, philosophers and data scientists of various disciplines will find this philosophical perspective and conceptual framework of great interest, especially as a starting point for further in-depth analysis of algorithms used in data science.

Evidence-Based School Counseling Routledge

The Lance studies and other research in this presentation booklet show that, as a whole, library media specialists and the programs they create do make a difference.

Exploring the Impact of Multi-agency Working on Disabled Children with Complex Health Care Needs, Their Families and the Professionals who Support Them Routledge

Using Developmentally Appropriate Practices to Teach the Common Core: Grades PreK-3 provides current and prospective primary grade teachers with an understanding of the CCSS-ELA and CCSS-M that highlights their compatibility with developmentally appropriate practices (DAP), the instructional approach generally preferred by teachers of young children. The book begins by framing the CCSS as a distinct improvement over lengthy lists of academic content standards and as a carefully conceptualized and DAP-friendly set of curriculum guidelines. Next, the CCSS-ELA and CCSS-M for Grades K-3 are unpacked, analyzed, synthesized, and cross-referenced to key features of DAP. Finally, several “hot topic” issues—differentiating instruction to meet the needs of all learners, ensuring equitable access to the curriculum for English Language Learners, addressing assessment and accountability expectations, and educating parents and families about the CCSS and DAP—are prioritized and examined in depth. Using Developmentally Appropriate Practices to Teach the Common Core: Grades PreK-3 is a highly useful guide for both pre-service and in-service early childhood education teachers.

History, Evolution and Internationalism Oxford University Press

Despite sustained debate and progress the evolving thing that is evidence based nursing or practice (EBP) continues to dangle a variety of conceptual and practical loose threads. Moreover, when we think about what is being asked of students and registered or licenced practitioners in terms of EBP, it is difficult not to concede that this ‘ask’ is in many instances quite large and, occasionally, it may be unachievable. EBP has and continues to improve patient, client and user care. Yet significant questions concerning its most basic elements remain unresolved and, if nurses are to contribute to the resolution or reconfiguration of these questions then, as a first step, we must acknowledge their existence. From a range of international standpoints and perspectives, contributors to this book focus on aspects of EBP that require development. This focus is always robust and at times it is unashamedly provocative. Contributors challenge readers to engage with anomalies that surround the subject and readers are asked to consider the often precarious assumptions that underpin key aspects of EBP. While both conflict and concord are evident among the various offerings presented here, the book nonetheless creates and sustains a narrative that is bigger or more substantial than the sum of individual parts. And, across contributions, a self-assuredly critical stance towards EBP as currently practiced, conceptualized and taught coexists alongside respectful admiration for all who make it happen. Exploring Evidence-based Practice: Debates and Challenges in Nursing should be considered essential reading for academics and postgraduate students with an interest in evidence-based practice and nursing research.

GRADES PREK-3

McGraw Hill

A history of the successes of the human rights movement and a case for why human rights work. Evidence for Hope makes the case that yes, human rights work. Critics may counter that the movement is in serious jeopardy or even a questionable byproduct of Western imperialism. Guantánamo is still open and governments are cracking down on NGOs everywhere. But human rights expert Kathryn Sikkink draws on decades of research and fieldwork to provide a rigorous rebuttal to doubts about human rights laws and institutions. Past and current trends indicate that in the long term, human rights movements have been vastly effective. Exploring the strategies that have led to real humanitarian gains since the middle of the twentieth century, Evidence for Hope looks at how essential advances can be sustained for decades to come.

DEBATES AND CHALLENGES IN NURSING

Transaction Publishers

Habits of Mind maintains that the fact that almost everyone now goes to college need not be seen as an obstacle to excellence in education. Some critics have insisted that college is not for everyone, but William B. Allen and Carol Allen assert that the college diploma has rightly become as much the norm in this century as the high school diploma was during the twentieth century. Accordingly, it is essential that higher education remains true to its deepest purpose: the cultivation of proficient humanity. The authors see the key to this goal as the development of judgment, or “habits of mind.” Habits of mind are far and away the most influential determinants of human conduct, and nowhere are they more profoundly shaped than in institutions of higher education. Furthermore, liberal education has proven most effective in this undertaking. The authors elaborate on the purpose of higher education and identify the chief obstacles to achieving its aim. They demonstrate the critical role of academic leaders in achieving the aim of higher education and posit that excellence in judgment is the primary characteristic of the academic leaders who fulfill this role. They examine three aspects of access to higher education: academic readiness, the cost and funding of higher education, and the capacity of the physical plant. Finally, they use policies developed in Virginia to demonstrate realistic approaches to achieving the aims of access and quality discussed throughout the book. The authors draw on their years of experience as practitioners in both private and public institutions, liberal arts colleges, and research universities to develop their material. This volume will be of interest to faculty and students in higher education programs, nation and state public policymakers, legislative and academic leaders, and a general public concerned about the cost and value of a college education.

HOW TO USE EVIDENCE TO MAKE BETTER ORGANIZATIONAL DECISIONS

Routledge

Measure the difference you make in students' academic, career, and personal/social development! Aligned with the American School Counselor Association's National Model, this authoritative guide from highly respected counselor educators and trainers gives preservice and inservice counselors the tools to identify evidence-based practices in their field and to use data in designing, implementing, and evaluating programs and interventions. With vignettes and recommendations in every chapter, this book offers skill-building guidelines for: Analyzing outcome research to inform planning Carrying out action research and building collaborative partnerships Measuring student learning and behavior change Communicating results to stakeholders, and more

Hi Willow Research & Pub
Decisions in businesses and organizations are too often based on fads, fashions and the success stories of famous CEOs. At the same time, traditional models and new cutting-edge solutions often fail to deliver on what they promise. This situation leaves managers, business leaders, consultants and policymakers with a profound challenge: how can we stay away from trends and quick fixes, and instead use valid and reliable evidence to support the organization? In response to this problem, evidence-based management has evolved with the goal of improving the quality of decision-making by using critically evaluated evidence from multiple sources - organizational data, professional expertise, stakeholder values and scientific literature. This book sets out and explains the specific skills needed to gather, understand and use evidence to make better-informed organizational decisions. Evidence-Based Management is a comprehensive guide that provides current and future managers, consultants and organizational leaders with the knowledge and practical skills to improve the quality and outcome of their decision-making. Online resources include case studies, exercises, lecture slides and further reading.

This new edition of an ALA bestseller remains an indispensable all-in-one resource for everything related to the school library media center. Articles from dozens of respected authors and experts, culled from popular journals such as Knowledge Quest and School Library Journal, cover everything of interest to the contemporary school librarian, including Professional development and career guidance Information on collection development and school library resources such as books, periodicals, e-mail discussion groups, databases, websites, and more Programming, partnering, promoting, and collaborating for student success Innovative ways to use technology like social networking and e-books in service of education Tips for analyzing and strengthening ongoing programs Building and maintaining healthy relationships with stakeholders Covering a wide range of important information in one handy volume, this stimulating handbook is a must-have for every school librarian.

Interpretive Description Routledge

Political discourse in much of the world remains mired in simplistic ideological dichotomies of market fundamentalism for efficiency versus substantial socialism for equity. Contemporary public policy design is far more sophisticated. It blends market, government and community tools to simultaneously achieve both equity and efficiency. Unlike in the twentieth century, this design is increasingly grounded in a deep evidence base derived by way of rigorous empirical techniques. A new paradigm is emerging: hybrid policies. This volume provides a thorough introduction to this technical side of public policy analysis and development. It demonstrates that it is possible to go beyond ideology, and find there some powerful answers to our most pressing problems. An international team of experts, many of whom have experience with the design or implementation of hybrid policies, helps cover the behavioural, institutional and regulatory theories that inform the choice of policy objectives and lead the initial conception of solutions. They explain the reasons why we need evidence-based public policy and the state-of-the-art empirical techniques involved

in its development. And they analyse a range of in-depth case studies from industrial relations to health care to illustrate how hybrids can intermingle the strengths of governments, markets and the community to combat the weaknesses of each and arrive at bipartisan outcomes. Hybrid Public Policy Innovations is geared to scholars and practitioners of public policy administration and management who desire to understand the analytical reasons why policies are designed the way they are, and the purpose of evidence-gathering frameworks attached to policies at implementation.
