As the first botanical history of World War II, *Plants Go to War* examines military history from the perspective of plant science. From victory gardens to drugs, timber, rubber, and fibers, plants supplied materials with key roles in victory. Vegetables provided the wartime diet both in North America and Europe, where vitamin-rich carrots, cabbages, and potatoes nourished millions. Chicle and cacao provided the chewing gum and chocolate bars in military rations. In England and Germany, herbs replaced pharmaceutical drugs; feverbark was in demand to treat malaria, and penicillin culture used a growth medium made from corn. Rubber was needed for gas masks and barrage balloons, while cotton and hemp provided clothing, canvas, and rope. Timber was used to manufacture Mosquito bombers, and wood gasification and coal replaced petroleum in European vehicles. Lebensraum, the Nazi desire for agricultural land, drove Germans eastward; troops weaponized conifers with shell bursts that caused splintering. Ironically, the Nazis condemned non-native plants, but adopted useful Asian soybeans and Mediterranean herbs. Jungle warfare and camouflage required botanical knowledge, and survival manuals detailed edible plants on Pacific islands. Botanical gardens relocated valuable specimens to safe areas, and while remote locations provided opportunities for field botany, Trees surviving in Hiroshima and Nagasaki live as a symbol of rebirth after vast destruction.

Hydrocolloids are among the most commonly used ingredients in the food industry. They function as thickeners, gelling agents, texturizers, stabilizers, and emulsifiers, and have applications in the areas of edible coatings and flavor release. This book *More Cooking Innovations: Novel Hydrocolloids for Special Dishes* completes the very demanding task begun with our previous book: "Cooking Innovations, Using Hydrocolloids for Thickening, Gelling and Emulsification" of covering all hydrocolloids that are or will be very useful and important in the kitchen. Together, these books provide a complete picture of hydrocolloid use in foods, both in the kitchen and for food technologists and academics. The book includes several very important hydrocolloids, among them: chitin and chitosan, gum karaya, gum tragacanth, and milk proteins. Additional chapters comprise unique hydrocolloids which, in our opinion, will not only be used in future cooking (by both amateur cooks and professional chefs), but can pave the way to new and fascinating recipes and cooking techniques. The book also discusses novel hydrocolloids—the "where, why, and when" as well as future ideas for hydrocolloid processing and cooking. This book therefore describes more cooking innovations, and completes the list of hydrocolloids that are now, or will be used in kitchens and cooking for years to come.

Heal Heartburn and Lose Weight, Naturally If you suffer from acid reflux, you're not alone. More than 50 million Americans have GERD, or gastroesophageal reflux disease, and while antacids can be effective for short-term relief, they can also cause dangerous medical conditions if they're used for more than the recommended fifty days at a time. Luckily, *The Acid Reflux Solution* offers a simple plan to help you gradually and safely reduce—and eventually eliminate—the need for pills while alleviating your heartburn. In this combination medical guide and cookbook, gastroenterologist Jorge E. Rodriguez, MD, has teamed up with registered dietitian and food writer Susan Wyler to present a three-step program to heal heartburn naturally. This isn't a formal diet plan—no calorie counting required—but you'll probably shed some pounds while following *The Acid Reflux Solution* because these recipes were designed for good health. In fact, Dr. Jorge has not only healed his own heartburn since developing this plan, but he has also lost more than 30 pounds! In step one you make some simple lifestyle modifications, like raising the head of your bed, loosening your belt, and eating less but more often. These are easily achievable goals that you can start working on today. In step two, you start eating to avoid reflux. With 100 high-fiber, low-fat, portion-controlled recipes to choose from, this step is the most delicious—and surprising. The list of foods that actually trigger acid reflux is smaller than you might think, which means you can enjoy meals that you probably thought were off limits, like Cuban Black Bean Soup, Grass-Fed Beef and Portobello Blue Cheese Burgers, Asian Barbecued Chicken, and even Spaghetti and Meatballs. In the final step, you reduce the dosage and frequency of the medications you were taking to control your heartburn because you won't need them anymore. *The Acid Reflux Solution* combines the latest medical research with reflux-friendly

recipes to help you feel great, lose weight, and live heartburn free.

This book reimagines the compositional semantics of comparative sentences using words such as more, as, too, and others. The book's central thesis entails a rejection of a fundamental assumption of degree semantic frameworks: that gradable adjectives like tall lexicalize functions from individuals to degrees, i.e., measure functions. Alexis Wellwood argues that comparative expressions in English themselves introduce measure functions; this is the case whether that morphology targets adjectives, as taller or more intelligent; nouns, as in more coffee, more coffees; verbs, such as run more, jump more; or expressions of other categories. Furthermore, she suggests that expressions that comfortably and meaningfully appear in the comparative form should be distinguished from those that do not in terms of a general notion of "measurability": a measurable predicate has a domain of application with non-trivial structure. This notion unifies the independently motivated distinctions between, for example, gradable and non-gradable adjectives, mass and count nouns, singular and plural noun phrases, and telic and atelic verb phrases. Based on careful examination of the distribution of dimensions for comparison within the class of measurable predicates, she ties the selection of measure functions to the specific nature and structure of the domain entities targeted for measurement. The book ultimately explores how, precisely, we should understand semantic theories that invoke the "nature" of domain entities: does the theory depend for its explanation on features of metaphysical reality, or something else? Such questions are especially pertinent in light of a growing body of research in cognitive science exploring the understanding and acquisition of comparative sentences.

Our Plastic Problem and How to Solve It Penguin

A gothic tale of murder and corruption set in 1840s Victorian London, taking inspiration from our most famous 19th century writers. The 1840s. Railway Baron Sir Martin Malprelate has been laying waste to the warren of Camden; buying up houses and clearing streets for his new railway line linking King's Cross with the prosperous town of Middlemarch. He stands to make his fortune ever more vast and to earn the loathing of all who attempt to stand up to him. Little wonder, then, that he meets a violent end on a foggy street after walking out of a particularly bitter meeting with outraged residents facing eviction. But the cause of his death causes more wonder. How could he have possibly fallen beneath the wheels of a speeding spectral train running on tracks not yet even built? Sir Martin's death is investigated by the police, but the company employ one of its senior engineers, Mr Bryde, to pursue his own investigation. Bryde uncovers a network of resentment and conspiracy, popular opposition to the expansion of the railways, agitating workers, scheming shareholders, corrupt politicians and a gallery of varied and grotesque characters, all of whom had some stake in the old man's death. Lacing it's realism with both social commentary and the gothic imaginations of the time *The Murder of Sir Martin Malprelate* is a vivid recreation of a London stalked by poverty and haunted by visions of demons and ghosts; a world of slums, lavish wealth and opium dens. The narrative is coloured by exotic characters all too ready to believe in the supernatural but the plot is driven by rationality and the all too real motivations of greed and revenge.
