This book presents the papers from the Internal Combustion Engines: Performance, fuel economy and emissions held in London, UK. This

popular international conference from the Institution of Mechanical Engineers provides a forum for IC engine experts looking closely at developments for personal transport applications, though many of the drivers of change apply to light and heavy duty, on and off highway, transport and other sectors. These are exciting times to be working in the IC engine field. With the move towards downsizing, advances in FIE and alternative fuels, new engine architectures and the introduction of Euro 6 in 2014, there are plenty of challenges. The aim remains to reduce both CO2 emissions and the dependence on oil-derivate fossil fuels whilst meeting the future, more stringent constraints on gaseous and particulate material emissions as set by EU, North American

and Japanese regulations. How will technology developments enhance performance and shape the next generation of designs? The book introduces compression and internal combustion engines' applications, followed by chapters on the challenges faced by alternative fuels and fuel delivery. The remaining chapters explore current improvements in combustion, pollution prevention strategies and data comparisons. presents the latest requirements and challenges for personal transport applications gives an insight into the technical advances and research going on in the IC Engines field provides the latest developments in compression and spark ignition engines for light and heavy-duty applications, automotive and other markets

LOOKING FOR TROUBLE: Mark Dalton

isn't sure if he finds trouble or if trouble

finds him. But ever since his wife traded

him in for a prettier model, and he

traded in his Private Eye business for a Peterbilt, it seems to be everywhere he goes. In this collection of loosely interwoven who-dunnits, Edo van Belkom introduces Mark Dalton, Trucker Detective. Whether he's scooping up pretty hitchhikers with secrets, getting back goods stolen right out from under his nose, making a shady repair shop pay, or solving a racially charged, post-9/11 murder, Dalton is one busy trucker. And truth is, he wouldn't have it any other way.

Tens of thousands of mechanical engineers are engaged in the design, building, upgrading, and optimization of various material handling facilities. The peculiarity of material handling is that there are numerous technical solutions to any problem. The engineer's personal selection of the optimal solution is as critical as the technical component.

Michael Rivkin, Ph.D., draws on his decades of experience in design, construction, upgrading, optimization, troubleshooting, and maintenance throughout the world, to highlight topics such as:

- physical principles of various material handling systems;
-

considerations in selecting technically efficient and environmentally friendly equipment;

- best practices in upgrading and optimizing existing bulk material handling facilities;
- strategies to select proper equipment in the early phases of a new project.

Filled with graphs, charts, and case studies, the book also includes bulleted summaries to help mechanical engineers without a special background in material handling find optimal solutions to everyday problems.

In 1950, Maserati replaced its first production car, the two-door A6 1500, with a second series: the A6G 2000. Customers could choose from several designs: a bulky design by Pininfarina, a muscular one from Allemano, the glamorous Coupès and Spyder versions by Frua, and the eccentric Coupé by Vignale. All of these versions were slightly different and were among the rarest and most expensive cars of their time. This heavily illustrated book

describes for the first time the technical development of the A6G 2000, while also telling the individual histories of each of the versions, chassis by chassis.
