(comprehensive ... Meta-regression analysis (MRA) is a quantitative method of conducting literature surveys. Meta-regression has gained popularity in social, behavioral and economic sciences. Important applications have focused on qualifying estimates of policy-relevant parameters, testing economic theories, explaining heterogeneity, and qualifying potential

biases. Meta-regression - Wikipedia Conceptually, Meta-Regression does not differ much from a subgroup analysis. In fact, subgroup analyses with more than two groups are nothing more than a meta-regression with categorical predictors. However, meta-regression does also allow us to use continuous data as predictors and check whether these variables are associated

with effect size differences. Chapter 8 Meta-Regression | Doing Meta-Analysis in R NeuroQuery extends the scope of standard meta-analysis, as it extracts from the literature a comprehensive statistical summary of evidence accumulated by neuroimaging research. It can be used to explore the domain knowledge across sub-fields, generate new hypotheses, and construct
