Now in its ninth edition, *Air Transportation: A Global Management Perspective* by John Wensveen is a well-proven, accessible textbook that offers a comprehensive introduction to the theory and practice of air transport management. In addition to explaining the fundamentals, the book transports the reader to the leading edge of the discipline, using past and present trends to forecast future challenges and opportunities the industry may face, encouraging the reader to think deeply about the decisions a manager implements. The word "Global" has been added to the subtitle for this edition, reflecting an increased emphasis on worldwide operations, including North America, Latin America/Caribbean, Europe, Asia-Pacific, the Middle East, and Africa. The ninth edition focuses on the "Age of Acceleration," addressing trends related to emerging technologies, such as autonomy, artificial intelligence, augmented reality, virtual reality, 3-D printing, data analytics, blockchain, cybersecurity, etc. New material includes extra information on airport

management and operations, air carrier business models, aviation risk, safety and security, and how changing political landscapes impact the aviation industry. Enhanced content is supported by the addition of new chapters and online supplemental resources, including PowerPoint presentations, chapter quizzes, exam questions, and links to online resources. This wide-ranging textbook is appropriate for nearly all aviation programs that feature business and management. Its student-friendly structure and style make it highly suitable for modular courses and distance-learning programs, or for self-directed study and continuing personal professional development.

This new study takes a keen look at the problems facing the international community due to conflicts arising from applications of varying competition laws by different competition authorities to international airline alliances. As a result of privatisation, deregulation, liberalisation and globalisation, international air carriers form alliances with one another in order to cope with growing competition in the international air transport market. This book clearly provides an introduction to the background to and origin of airline alliances, different models of alliances and the related anti-competitive practices resulting from existing international airline alliances. The potential anti-competitive practices resulting from these cross-border alliances trigger a great deal of concern from various competition authorities. Thus, this study goes on to provide a detailed analysis regarding the relevant EC competition law and US antitrust law and their applications to alliance activities. The comparison of different applications of EC competition law and US antitrust law to international airline alliances provides leading research results first-hand. In the conclusion, the essential elements regarding establishing a level playing field in the international air transport market are identified and the author provides possible solutions for the harmonisation of different applications of competition law to international airline alliances.
