ASHLEY BRIANA

On a Global Mission: The Automobiles of General Motors International Volume 3 FriesenPress
T.S.C. Cooke joined the RAF as war began in 1939, aged 18, and trained to be a bomber pilot. Rising to the rank of squadron leader and decorated three times, Cooke bombed Berlin on 7 October 1940 in a Whitley Mk V, nearly ditching in the North Sea.

Throughout this tour he faced the usual dangers of wartime aircrew, his aircraft being hit by AA fire on several occasions, once almost having to order his aircrew to bail out but landed safely at the last minute. They were also attacked by night fighters, encountered icing and even shot up a train and bomber station at tree-top level. Flying Wellingtons and Stirlings, Cooke took part in the infamous 1,000-bomber raid on Cologne and Essen, before returning to operations flying Special Ops Halifax aircraft, dropping agents into enemy-occupied France. After a dozen missions, he was shot down but he and

his navigator survived and evaded capture. Helped by the French resistance, they got into Spain and returned home via Gibraltar. Both men received the DFC for their bravery. While their story is not totally unique, their adventures and courage make this tale akin to an adventure novel.

SCIENTIFIC AMERICAN

Engine Management -- VR SeriesEngine Management - VR SeriesCar

In a rapidly changing world, there is an ever-increasing need to monitor the Earth's resources and manage it sustainably for future generations. Earth observation from satellites is critical to provide information required for informed and timely decision making in this regard. Satellite-based earth observation has advanced rapidly over the last 50 years, and there is a plethora of satellite sensors imaging the Earth at finer spatial and spectral resolutions as well as high temporal resolutions. The amount of data available for any single location on the Earth is now at the petabyte-scale. An ever-increasing capacity and computing power is

needed to handle such large datasets. The Google Earth Engine (GEE) is a cloud-based computing platform that was established by Google to support such data processing. This facility allows for the storage, processing and analysis of spatial data using centralized high-power computing resources, allowing scientists, researchers, hobbyists and anyone else interested in such fields to mine this data and understand the changes occurring on the Earth's surface. This book presents research that applies the Google Earth Engine in mining, storing, retrieving and processing spatial data for a variety of applications that include vegetation monitoring, cropland mapping, ecosystem assessment, and gross primary productivity, among others. Datasets used range from coarse spatial resolution data, such as MODIS, to medium resolution datasets (Worldview -2), and the studies cover the entire globe at varying spatial and temporal scales.

RAILWAY TIMES

The History Press
Calling all speed demons!

Get your motor running with this exciting and educational visual encyclopedia for children. You'll enjoy the ride on more than 1,000 different types of transport. Gently take to the skies in a hot air balloon or race into space on a rocket.

Experience life in the fast lane in a Formula 1 racing car or set sail for new horizons aboard a luxury cruise ship. The world is your oyster as you chart the entire history of transport, from traditional horse and carts to today's high-speed networks and supersonic vehicles.

Incredible images accompanied by fact-packed text give you the full lowdown on everything that could possibly take you from A to B. Cars, Trains, Ships, and Planes guarantees thrills and spills as you test out the fastest, largest, longest, and costliest modes of transport in the ultimate record-breakers. Put yourself in the driving seat with this complete visual guide to vehicles.

GOOGLE EARTH ENGINE APPLICATIONS

IGI Global
The study of technology and its implications in the medical field has become an increasingly crucial area of research. By integrating technological innovations into clinical practices, patients can receive improved diagnoses and treatments, as well as faster and safer recoveries. Virtual Reality Enhanced Robotic Systems for Disability Rehabilitation is an authoritative reference source for the latest scholarly research on the use of computer-assisted rehabilitation methods for disabled patients. Highlighting the application of robots, sensors, and virtual environments, this book is ideally designed for graduate students, engineers, technicians, and company administrators interested in the incorporation of auto-training methods in patient recovery.

THE ENGINEER

e-artnow sro
Virtual and augmented reality is the next frontier of technological innovation. As technology exponentially evolves, so do the ways in which humans interact and depend upon it. Virtual and Augmented Reality: Concepts, Methodologies, Tools, and Applications is a comprehensive reference source for the latest scholarly material on the trends, techniques, and uses of virtual and augmented reality in various fields, and examines the benefits and challenges of these developments.

Highlighting a range of pertinent topics, such as human-computer interaction, digital self-identity, and virtual reconstruction, this multi-volume book is ideally designed for researchers, academics, professionals, theorists, students, and practitioners interested in emerging technology applications across the digital plane.

Industrial Engineering and the Engineering Digest Penguin

Volume One traces the history of Opel and Vauxhall separately from inception through to the 1970s and thereafter

collectively to 2015. Special attention is devoted to examining innovative engineering features and the role Opel has taken of providing global platforms for GM. Each model is examined individually and supplemented by exhaustive supporting specification tables. The fascinating history of Saab and Lotus begins with their humble beginnings and examines each model in detail and looks at why these unusual marques came under the GM Banner. Included is a penetrating review of Saab through to its unfortunate demise. Volume Two examines unique models and variations of Chevrolet and Buick manufactured in the Southern Hemisphere and Asia but never offered in North America. Daewoo, Wuling and Baojun are other Asian brands covered in detail. This volume concludes with recording the remarkable early success of Holden and its continued independence through to today. Volume Three covers the smaller assembly operations around the world and the evolution of GM's export operations. A brief history of Isuzu, Subaru and Suzuki looks at the three

minority interests GM held in Asia. The GM North American model specifications are the most comprehensive to be found in a single book. Global and regional sales statistics are included. GM executives and management from around the globe are listed with the roles they held. An index ensures that these volumes serve as the ideal reference source on GM.

FOCUS ON: 100 MOST POPULAR SEDANS

MDPI

From the first motor cars and classic cars to today's supercars and Formula 1, this is the ultimate book about the history of the car. Packed with stunning photography, and featuring more than 2,000 cars, Car shows you how cars have evolved around the world over the the last 130 years, and their impact on society as objects of curiosity, symbols of status and luxury, and items of necessity. Extensive catalogues showcase the most important marques and models, organized in categories such as sports cars, convertibles, and city compacts. The book also features virtual photographic tours of some of the most iconic

cars from each era such as the Rolls Royce Silver Ghost, Ford Model T, Lamborghini Countach, and Ferrari F40, while cross-sections of key engines explore the driving force behind them. Lavishly illustrated feature spreads detail the stories of the men, machines, and magic that helped create the car world's most famous marques and made brands such as Porsche, Mercedes-Benz, Aston Martin, and Cadillac household names. If you love cars, then you'll love Car. It is simply a must-have title for all car enthusiasts.

The Engineering Digest Advanced Marketing Services

This reference features the best models from the greatest manufacturing companies of the world, both past and present. Alphabetized entries include a short history of each manufacturer. Specific models of 600-plus cars are examined in detail and illustrated by color and bandw photos highlighting their unique qualities. The story of each classic car is complemented by performance tables that include information such as maximum speed and power, engine type, and

details of transmission, chassis, suspension and brakes. Oversize: 9.5x12". Annotation copyrighted by Book News, Inc., Portland, OR
