The automobile is an icon of modern technology because it includes most aspects of modern engineering, and it offers an exciting approach to engineering education. Of course there are many existing books on introductory fluid/aero dynamics but the majority of these are too long, focussed on aerospace and don't adequately cover the basics. Therefore, there is room and a need for a concise, introductory textbook in this area. Automotive Aerodynamics fulfills this need and is an introductory textbook intended as a first course in the complex field of aero/fluid mechanics for engineering students. It introduces basic concepts and fluid properties, and covers fluid dynamic equations. Examples of automotive aerodynamics are included and the principles of computational fluid dynamics are introduced. This text also includes topics such as aeroacoustics and heat transfer which are important to engineering students and are closely related to the main topic of aero/fluid mechanics. This textbook contains complex mathematics, which not only serve as the foundation for future studies but also provide a road map for the present text. As the chapters evolve, focus is placed on more applicable examples, which can be solved in class using elementary algebra. The approach taken is designed to make the mathematics more approachable and easier to understand. Key features: Concise textbook which provides an introduction to fluid mechanics and aerodynamics, with automotive applications Written by a leading author in the field who has experience working with motor sports teams in industry Explains basic concepts and equations before progressing to cover more advanced topics Covers internal and external flows for automotive applications Covers emerging areas of aeroacoustics and heat transfer Automotive Aerodynamics is a must-have textbook for undergraduate and graduate students in automotive and mechanical engineering, and is also a concise reference for engineers in industry.

This is a print on demand edition of a hard to find publication. Explores whether sufficient data exists to examine the temporal and spatial relationships that existed in terrorist group planning, and if so, could patterns of preparatory conduct be identified? About one-half of the terrorists resided, planned, and prepared for terrorism relatively close to their eventual target. The terrorist groups existed for 1,205 days from the first planning meeting to the date of the actual/planned terrorist incident. The planning process for specific acts began 2-3 months prior to the terrorist incident. This study examined selected terrorist groups/incidents in the U.S. from 1980-2002. It provides for the potential to identify

patterns of conduct that might lead to intervention prior to the commission of the actual terrorist incidents. Illustrations.

Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. U.S. automakers are suddenly awash in profits, and South Koreans and Europeans have gained market shares, while Honda, Nissan, and Toyota have curtailed production following the 2011 tsunami in Japan. Shortages of Japanese new cars and supplier disruptions will likely push used car prices through the roof well into 2012, so what should a savvy buyer do? The all-new Lemon-Aid Used Cars and Trucks 2012-2013 has the answers, including: More vehicles rated, with some redesigned models that don't perform as well as previous iterations downrated. More roof crash-worthiness ratings along with an expanded cross-border shopping guide. A revised summary of safety- and performance-related defects that are likely to affect rated models. More helpful websites listed in the appendix as well as an updated list of the best and worst "beaters" on the market. More "secret" warranties

taken from automaker internal service bulletins and memos than ever.

Americans are buying ammunition for their enemies every time they buy gas. Energy security is the way out of this dilemma and Dr. Zubrin has a plan to achieve it.- Clifford D. May, Syndicated Columnist; President, Foundation for the Defense of Democracies Robert Zubrin pulls no punches and moves effortlessly from a fascinating oil-centered take on WW II to

making the mathematics of oil alternatives intelligible to lay readers. Oil and hydrogen take huge hits and alcohol fuels win big. Don't miss this one.- James Woolsey, former Director, Central Intelligence Agency To win the war on terror, we need to remove the yoke of our oil dependence and cut the flow of petrodollars to regimes that spread radical Islam. Energy Victory is a bold, yet realistic plan to do just that. It is a vitally important book about the most critical issue we face today.- Dr. Gal Luft, Executive Director, Institute for the Analysis of Global Security In Energy Victory, Zubrin supplies a forceful plan to finally break oil's global stranglehold and seriously address world development. This is something we've really needed for some time. Washington should sit up and take notice.- James P. Clark, Chairman, World Technology Network In this compelling argument for a new direction in US energy policy, world-renowned engineer and best-selling author Robert Zubrin lays out a bold plan for breaking the economic stranglehold that the OPEC oil cartel has on our country and the world. Zubrin presents persuasive evidence that our decades-long relationship with OPEC has resulted in the looting of our economy, the corruption of our political system, and now the funding and protection of terrorist regimes and movements that are committed to our destruction. Debunking the false solutions and myths that have deterred us from taking necessary action, Zubrin exposes the fakery that has allowed many politicians-including current US president George W. Bush-to posture that they are acting to resolve this problem while actually doing nothing significant toward that goal. Zubrin's plan is straightforward and practical. He argues that if Congress passed a law requiring that all new cars sold in the USA be flex-fueled-that is, able to run on any combination of gasoline or alcohol fuels-this one action would destroy the monopoly that the oil cartel has maintained on the globe's transportation fuel supply, opening it up to competition from alcohol fuels produced by farmers worldwide. According to Zubrin's estimates, within three years of enactment, such a regulation would put 50 million cars on the road in the USA capable of running on high-alcohol fuels, and at least an equal number overseas. He further advocates tariff policies favoring alcohol over petroleum imports. Energy Victory shows how we could be using fuel dollars that are now being sent to countries with ties to terrorism to help farmers here and abroad, boosting our own economy and funding world development. Furthermore, by switching to alcohol fuels, which pollute less than gasoline and are made from plants that draw carbon dioxide from the air, this plan will facilitate the worldwide economic growth required to eliminate global poverty without the fear of greenhouse warming. Energy Victory offers an exciting vision for a dynamic, new energy policy, which will not only go a long way toward safeguarding homeland security in the future but will also provide solutions for global warming and Third World development. FURTHER PRAISE FOR ENERGY VICTORY: Energy Victory is the first book I have ever read that actually lays out a credible plan to turn around the world energy situation.... Energy Victory is a knock out. It should be read by everyone concerned with policy in this vital area, and its central recommendation implemented as rapidly as feasible.- Energy Daily Americans are finally becoming aware that energy isn't just an economic or environmental issue; it's a grave national security issue. It's long past time to stop bankrolling *Standard Catalog of 4 X 4's* McFarland

It has usually shared a platform and design with the Ford F-150 pickup truck. Ford currently offers the standard regular-sized model and the larger EL/Max model, succeeding the Excursion which was discontinued in 2005. It is the second Ford vehicle to use the Expedition name, as it was part of the Explorer Sport's trim models during the 1995 model year. All Expeditions were originally built in Wayne, Michigan. A fourth generation will arrive to dealers in 2014 or 2015. The Expedition offered up to nine passenger seating in model years before 2007 (with a front bench seat option); 2007-present offer 2 bucket seats in the first row. It is equipped with a V8 engine.
