## **GARDNER CAMILA**

---

### **How Siri, Google Car, and Artificial Intelligence Will Force Us to Change Our Laws**

McGill-  
Queen's Press - MQUP

This volume examines how the U.S. military must rebuild in the wake of Iraq/Afghanistan, and refocus its power projection to face the new challenges emerging in the Pacific and with China. • Examines the nature of

the destabilizing threat that China presents to the power balance of the Pacific, along with how the United States can work with its allies to shape a 21st-century strategy • Discusses in detail the necessity for reshaping the U.S. military after the land wars in Iraq and Afghanistan, and the ways in which American forces can be rebuilt for the future • Explains why the evolving Pacific theater is an area of critical operations and will require significant change in terms of how

U.S. forces operate to deal with emerging threats • Assesses how new capabilities associated with emerging technologies—notably the Osprey, the F-35 aircraft, the Aegis Combat Systems, and a number of new European systems—allow new opportunities to work with our allies

*Workshop Summary*  
Macmillan

Looks at the latest technology developments in military technology, and examines what kind of military hardware, body armour, communication equipment and transportation military forces will use in the future. Suggested level: intermediate, junior secondary.

**Spacebat and the Fugitives (Book One): Tacos at the End of the World** IDW Publishing

The bestselling, critically acclaimed dystopian science fiction series *The Tube Riders* now available as a single volume for the first time. Includes *Underground Exile* *Revenge In the Shadow of London* *The Tube Riders* short stories An interview with the author

COMING MAY 24th - **GENESIS: RISE OF THE GOVERNOR #1** - A Thrilling prequel to the *Tube Riders* series and the first volume in a new series set prior to the events of *The Tube Riders: Underground*.

*Kickin' Bot* McGraw Hill Professional

A bold, hopeful, and thought-provoking account by “one of the

world's leading thinkers" (The Observer) of how we built a lonely world, how the pandemic accelerated the problem, and what we must do to come together again "A compelling vision for how we can bridge our many divides at this time of great change and disruption."—Arianna Huffington, founder and CEO of Thrive Global "An important new book."—The Economist NEXT BIG IDEA CLUB NOMINEE • NAMED ONE OF THE BEST BOOKS OF THE YEAR BY WIRED (UK) AND THE DAILY TELEGRAPH Loneliness has become the defining condition of the twenty-first century. It is damaging our health, our wealth, and our happiness and

even threatening our democracy. Never has it been more pervasive or more widespread, but never has there been more that we can do about it. Even before a global pandemic introduced us to terms like "social distancing," the fabric of community was unraveling and our personal relationships were under threat. And technology isn't the sole culprit. Equally to blame are the dismantling of civic institutions, the radical reorganization of the workplace, the mass migration to cities, and decades of neoliberal policies that have placed self-interest above the collective good. This is not merely a mental health crisis. Loneliness increases our risk of heart disease, cancer,

and dementia. Statistically, it's as bad for our health as smoking fifteen cigarettes a day. It's also an economic crisis, costing us billions annually. And it's a political crisis, as feelings of marginalization fuel divisiveness and extremism around the world. But it's also a crisis we have the power to solve. Combining a decade of research with firsthand reporting, Noreena Hertz takes us from a "how to read a face" class at an Ivy League university to isolated remote workers in London during lockdown, from "renting a friend" in Manhattan to nursing home residents knitting bonnets for their robot caregivers in Japan. Offering bold

solutions ranging from compassionate AI to innovative models for urban living to new ways of reinvigorating our neighborhoods and reconciling our differences, *The Lonely Century* offers a hopeful and empowering vision for how to heal our fractured communities and restore connection in our lives.

### **MENTATS OF DUNE**

Jeffrey Frank Jones  
 Tells the story of how, with the help of two inspiring science teachers, four

undocumented Mexican immigrants in Arizona put together an underwater robot from scavenged parts and went on to win the National Underwater Robotics Competition at UC Santa Barbara. *Rebuilding American Military Power in the Pacific: A 21st-Century Strategy* ABC-CLIO Publisher Description [The American High School's Third Century](#) Academic Conferences and publishing limited ABOUT THE CD: The CD-ROM contains CAD and rendering software, CAD models, robot fighting videos and printable tables filled with useful information for all robot builders. Rhino3D is a computer aided design (CAD) program and provides the tools to accurately model your designs ready for

rendering, animation, drafting, engineering, analysis, and manufacturing. (Evaluation version) Flamingo is a raytracing program that provides photometrically accurate images with reflections, refraction, diffusion, translucency, transparency, color bleeding, shadows, depth of field, depth attenuation, ClearFinish(TM), and indirect lighting. (Evaluation version) The robot fighting videos are some of the best fight clips available from the NC Robot StreetFight. The CAD models include a full representation of Dagoth, the thirty pound bot constructed in Combat Robots Complete. This particular model shows Dagoth's upgrade

plans from a wedge bot with spike to a vertical spinner bot with a secondary wedge. Cities Under Siege AMMFA Publishing Enter the arena of the metal gladiators Do you have what it takes to build a battle-ready robot? You do now. Here are the plans, step-by-step directions, and expert advice that will put you in competition-while you have a heck of a lot of fun getting there. Grant Imahara, the creator of the popular BattleBot Deadblow, shares everything he's learned about robot design, tools and techniques for metal working, the parts you need and where to get them, and plenty of tips to keep you off the ropes. When you're finished, you'll be ready to rumble. Just a

few of the topics you'll learn: Robot design 101 Chemicals and power tools Popular materials compared Cutting your armor Things to know about screws Top ten drive motors Bearings, casters, couplers, and U-joints Roller chains and sprockets Better traction through chemistry Choosing speeding controls Batteries and wiring The driving test Rammers, hammers and crushers *How to Draw the Battling Robots, Cool Spaceships, and Military Vehicles of Japanese Comics* Currency How the technological changes that are reshaping the future of work will transform the American high school as well. What will high school education look

like in twenty years? High school students are educated today to take their places in a knowledge economy. But the knowledge economy, based on the assumption that information is a scarce and precious commodity, is giving way to an economy in which information is ubiquitous, digital, and machine-generated. In *Running with Robots*, Greg Toppo and Jim Tracy show how the technological advances that are already changing the world of work will transform the American high school as well. Toppo and Tracy--a journalist and an education leader, respectively--look at developments in artificial intelligence and other fields that promise to bring us not only driverless cars but

doctorless patients, lawyerless clients, and possibly even teacherless students. They visit schools from New York City to Iowa that have begun preparing for this new world. Toppo and Tracy intersperse these reports from the present with bulletins from the future, telling the story of a high school principal who, Rip Van Winkle-style, sleeps for twenty years and, upon awakening in 2040, can hardly believe his eyes: the principal's amazingly efficient assistant is a robot, calculation is outsourced to computers, and students, grouped by competence and not grade level, focus on the conceptual. The lesson to be learned from both the present and the book's

thought-experiment future: human and robotic skillsets are complementary, not in competition. We can run with robots, not against them.

Killer Robots SAGE

Publishing India

Philosophers have wrestled over the morality and ethics of war for nearly as long as human beings have been waging it. The death and destruction that unmanned warfare entails magnifies the moral and ethical challenges we face in conventional warfare and everyday society. Intrinsicly linked are questions and perennial problems concerning what justifies the initial resort to war, who may be legitimately targeted in warfare, who should be permitted to serve the

military, the collateral effects of military weaponry and the methods of determining and dealing with violations of the laws of war. This book provides a comprehensive and unifying analysis of the moral, political and social questions concerning the rise of drone warfare.

**Library Journal**

National Academies Press

It started with a simple idea-mindless robots fighting rabid zombies, over the fate of the last living human baby. Then the war spread, and now it's a three-way rumble as an island of surviving Amazons get tossed into the mix! Collecting the entire Zombies vs. Robots and Zombies vs. Robots vs. Amazons series in one volume-

including three prequel tales, too-this book allows you to get your fix of the two sold-out miniseries adventures in inanity. Includes additional bits and pieces from the Eisner Award-winning team of Chris Ryall and Ashley Wood.

Mapping the Moral Landscape McGraw Hill Professional

Three different "build reports" make constructing your own battling robot simple. CD-ROM contains plans for building your battling robot.

### **TRENDS IN MILITARY INTERVENTIONS**

Wiley  
BrickJournal #64 (84 full-color pages), the magazine for LEGO® enthusiasts, takes a look at some fans who took classic LEGO

themes and made them their own! We see Piet Niederhausen's series of creations based on the Classic Yellow Castle, and meet the builder who started the Neo-Classic Space theme, Chris Giddens! We also travel to Billund, Denmark to the LEGO House and take a look at their Masterpiece Gallery! Plus: "Bricks in the Middle" by Kevin Hinkle and Matthew Kay, step-by-step "You Can Build It" instructions by Christopher Deck, Minifigure Customization with Jared K. Burks, and more!

The X-Files and Philosophy IDW Publishing  
In The X-Files and Philosophy, thirty-six fearless philosophers

seek for the truth which is out there, in here, at least somewhere, or (as the postmodernists claim) nowhere. One big issue is whether the weird and unexplained happenings, including the existence of entities unknown to traditional science, might really exist. And if they did, what would be the proper way to behave towards them? Some of these entities seem to flout conventional laws of nature—but perhaps we need to allow for different, as yet undiscovered, laws. If such fabulous entities really exist, what do we owe them? And if they don't exist, why do we imagine they do? In *The X-Files*, regular science is represented by Scully and usually turns out

to be wrong, while open-minded credulity or pseudoscience is represented by Mulder and usually turns out to be right, or at least somehow on the right track. Scully demands objective, repeatable evidence, and she usually gets it, with Mulder's help, in astounding and unwelcome ways. What lessons should we take from the finding of *The X-Files* that respectable science is nearly always wrong and outrageous speculative imagination nearly always right? Vij Books India Pvt Ltd  
 Nearly 45 countries are at different stages of developing robotic weapons or lethal autonomous weapon systems (LAWS). The United States, for example, has recently test launched its

robotic vessel Sea Hunter, a self-driving, 132-foot ship designed to travel thousands of miles without a single crew member on board. As reported, the vessel has the capability to detect and destroy stealth diesel-electric submarines and sea mines. However, though the militaries of the developed countries are in a race to develop LAWS to perform varied functions on the battlefield, a large section of robotic engineers, ethical analysts, and legal experts are of the firm belief that robotic weapons will never meet the standards of distinction and proportionality required by the laws of war, and therefore will be illegal. This book

provides an insight into lethal autonomous weapon systems and debates whether it would be morally correct to give machines the power to decide who lives and who dies on the battlefield.

Everything You Need to Build, Compete and Win Routledge

A sequel to Sisterhood of Dune finds Mentat School founder Gilbertus Albans making uneasy compromises to survive the Butlerian fanatics while ambitious student Valya Harkonnen plots revenge on a hero she blames for her family's downfall. 100,000 first printing.

**Four Undocumented Teenagers, One Ugly Robot, and the Battle for the American Dream**

ABC-CLIO

Offers instructions for drawing various robots and futuristic figures in Japanese comics and animation, including spaceships, cyborgs, and weapons.
