SCIENCE TEACHING RECONSIDERED

Routledge
Medical Education: Theory and Practice is a new text linking the theory and the practice for graduate students and educators who want to go beyond the basics. The

scholarship of medical education is, above all, a 'practice', but one that has a strong theoretical foundation. Neither theory nor practice stand still, and both are grounded in research. The novelty of this book lies in its interweaving of practice, theory, innovation and research. The book starts with a theorised, contemporary overview of the field. Next, it explores the theoretical foundations of medical education in depth. The remainder of the book reviews a whole a range

of educational contexts, processes and outcomes. This work has been edited by a distinguished, international team of medical educationalists and written by equally accomplished authors from across the globe representing a spectrum of disciplines. This will be an invaluable text for all Masters Students in health professions education as well as PhD students and education researchers wanting a background to the discipline. Educators and medical students will also

find it a very useful resource. Written by key figures in medical educational research combined with a strong editorial influence from the international editorial team. The text has a strong evidence-based approach that is fully cognisant of research methodology issues, The book provides a scholarly explanation on the topic, rather than aiming to say the last word. Written throughout in a clear and comprehensible style. The content is extensively referenced with additional

suggestions for further reading.

Independent Offices Appropriations, 1965

Springer

This book explores theoretical and practical aspects of implementing mobile language learning in university classrooms for English as a Foreign Language in Japan. The technologies utilized, such as smartphones, iPads, and wi-fi, integrate students' hand-held devices into the campus network infrastructure. The pedagogical aims of ubiquitous mobile

learning further incorporate social media, blended learning, and flipped classroom approaches into the curriculum. Chapter 1 defines mobile language learning within dimensions of e-learning and technology-assisted language learning, prior to tracing the development of mobile learning in Japan. Chapter 2 documents the sociocultural theory underpinning the authors' humanistic approach to implementation of mobile technologies. The

sociocultural pedagogy represents a global consensus of leading educators that also recognizes the agency of Asian learners and brings out their capability for autonomous learning. Case studies of universities, large and small, public and private, are organized similarly in Chapters 3 to 5. Institutional/pedagogical and technological context sections are followed by detailed content on the implementation of initiatives, assessment of effectiveness, and

recommendations for other institutions. Distinct from a collection of papers, this monograph tells a story in brief book length about theorizing and realizing mobile language learning, describing pioneering and original initiatives of importance to practitioners in other educational contexts. ICT Education ICT Education 46th Annual Conference of the Southern African Computer Lecturers' Association, SACLA 2017, Magaliesburg, South

Africa, July 3-5, 2017, Revised Selected Papers Schooling, Society and Curriculum offers a much needed reassessment and realignment of curriculum studies in the UK and international contexts. Comprising a collection of eleven original chapters by prominent, nationally and internationally known experts in the field of curriculum studies, the book leads and fosters critical, generic debates about formal education and its relationships to wider society. Focusing on key debates that have

been present for as long as formal state education has been in existence, the contributors contextualise them within a future-orientated perspective that takes particular account of issues specific to life in the early years of the twenty-first century. These include globalisation and nationalism; poverty and wealth; what it means to be a good citizen; cultural pluralism and intolerance; and - centrally - what it is that young people need from a school curriculum in order to develop as

happy, socially just adults in an uncertain and rapidly-changing world. The book is organized into four sections: issues and contexts values and learners school curricula in the digital age exploring the possible: globalisation, localisation and utopias.

Limited

The main objective is to assess the teaching and research capabilities of the candidates. Therefore, the test is aimed at assessing the teaching and general/research aptitude as well as their awareness. They are expected to possess and exhibit cognitive abilities. Cognitive abilities include comprehension, analysis, evaluation, understanding the structure of arguments and deductive and inductive reasoning. The candidates are also expected to have a

general awareness and knowledge of sources of information. They should be aware of interaction between people, environment and natural resources and their impact on quality of life.
