A Life of Magic Chemistry Nelson Thornes

In this invaluable book, 36 famous chemists, including 18 Nobel laureates, tell the reader about their lives in science, the beginnings of their careers, their aspirations, and their hardships and triumphs. The reader will learn about their seminal discoveries, and the conversations in the book bring out the humanity of these great scientists. Highlighted in the stories are the discovery of new elements and compounds, the VSEPR model, computational chemistry, organic synthesis, natural products, polysaccharides, supramolecular chemistry, peptide synthesis, combinatorial chemistry, X-ray crystallography, the reaction mechanism and kinetics, electron transfer in small and large systems, non-equilibrium systems, oscillating reactions, atmospheric chemistry, chirality, and the history of chemistry. Keywords: Chemistry; Nobel Prize; History of Chemistry; Famous Chemists Reviews: "This book makes interesting light reading, especially for chemists who have watched the field develop over the past 30 to 60 years ... it makes a worthwhile contribution to the oral history of science, and I recommend it for both libraries and individuals." Nature "István Hargittai's interviews with eminent scientists are a lively and important way of entering the minds of prominent chemists ... this makes a wonderful bedside book that attractively opens up a gallery of people, and a window onto the development of science." Chemistry & Industry "I have come back to these interviews time after time after my first read through. It's always inspiring to read about people who are good at what they do. To paraphrase Jack Dunitz, if you want value for your money in a predictable way, I think Hargittai's book is a good value. I strongly recommend it." Southwest Retort "Hargittai has done a superb job in selecting both chemical topics and appropriate interview subjects who know the topics first-hand ... Candid Science III is an interesting source of information on both current and recent chemistry and its practitioners, from a first-hand perspective of those practitioners. It also promises to be a valuable sourcebook for

historians of the chemistry of this time."The Alchemist, The ChemWeb Magazine "I recommend this useful volume, suitable for complete reading or browsing, not only to historians of chemistry and science but also to practicing chemists and students, who will benefit from these inspiring stories by some of chemistry's most eminent contributors."Chemical Heritage "I recommend this handy volume, admirably suited for complete reading or browsing, not only to historians of chemistry and of science but also to practicing scientists, especially beginning ones, as well as to students, who will surely benefit from these inspiring stories by some of chemistry's leading luminaries."The Chemical Educator

Advanced Biology Through Diagrams
Heinemann Educational Publishers

The fascinating autobiographical reflections of Nobel Prizewinner George Olah How did a young man who grew up in Hungary between the two World Wars go from cleaning rubble and moving pianos at the end of World War II in the Budapest Opera House to winning the Nobel Prize in Chemistry? George Olah takes us on a remarkable journey from Budapest to Cleveland to Los Angeles—with a stopover in Stockholm, of course. An innovative scientist, George Olah is truly one of a kind, whose amazing research into extremely strong acids and their new chemistry yielded what is now commonly known as "superacidic" magic acid chemistry." A Life of Magic Chemistry is an intimate look at the many journeys that George Olah has traveled—from his early research and teaching in Hungary, to his move to North America where, during his years in industry, he continued his study of the elusive cations of carbon, to his return to academia in Cleveland, and, finally, his move to Los Angeles, where he built the Loker Hydrocarbon Research Institute to find new solutions to the grave problem of the world's diminishing natural oil and gas resources and to mitigate global warming by recycling carbon dioxide into hydrocarbon fuels and products. Professor Olah invites the reader to enjoy the story of his remarkable path—marked by hard

work, imagination, and never-ending quests for discovery-which eventually led to the Nobel Prize. Intertwining his research and teaching with a unique personal writing style truly makes *A Life of Magic Chemistry* an engaging read. His autobiography not only touches on his exhilarating life and pursuit for new chemistry but also reflects on the broader meaning of science in our perpetual search for understanding and knowledge.
