Articles in this volume analyze rapidly evolving approaches, many at the cusp of development, to research plant defense mechanisms, pathogen variability, and epidemiology. Jones and Jones focus on emerging patterns that key resistance genes encode or require leucine-rich repeat proteins. Holub and Beynon analyze associating host resistance specificity with a locus and whether a phenotype is due to single or multiple genes. Ashby combines biochemical, molecular, and classical plant pathology to analyze interactions and provide leads to novel control strategies. Heath and Skalamera question why fungal biotrophs form intracellular structures, the significance of ensuing cellular rearrangements and death of invaded resistant cells. Spencer-Phillips explores the roles of haustoria and intercellular hyphae in intercepting organic and inorganic nutrients from hosts. Chamberlain and Ingram compare pathogen asexual and sexual reproduction for generating genetic variation, physiological and fitness costs and trade-offs. Hardham and Hyde consider new knowledge of sporangiogenesis and zoospore production in oomycetes. Dewey et al. analyze recent advances in accurately enumerating pathogens in soil. Wistemeyer et al. consider opportunities for horizontal gene transfer amongst microbes and plants in soil. Irwin et al. discuss origins of genetic variation of Phytophthora pathogens of pasture legumes. Rodriguez and Redman show how prominent pathogens which also behave as endophytes or saprophytes may influence plant community structure and dynamics. Haubold and Rainey challenge us to consider geneticvariation in plant-colonizing bacterial populations. Milgroom and Fry demonstrate that the practical need to understand pathogen variation is the most significant application of population genetics to disease management.

Following the U.S. invasion of Iraq in 2003 and the subsequent fall of the regime of Saddam Hussein, the U.S. government embarked upon a reconstruction effort which included rebuilding an Iraqi National Police. Retired and former American Police Officers were contracted to travel to Iraq to train this new police force. Dependent on their experience and ingenuity to make life bearable under very

austere conditions, and relying on the 'gallows sense of humor' they had acquired during their time in law enforcement back in the States, the instructors persevered in their task, often under trying and difficult circumstances, as well as hostile fire from insurgents determined to prevent the Iraqi police from regaining control of the streets of Baghdad. Life at the Police Academy varied from sheer boredom to moments of terror as mortars and rockets rained in. Leaving the academy to travel through the streets of Baghdad to the Green Zone for meetings could easily result in being ambushed. D. W. Wilber recounts his experiences as part of this effort, and the unique personalities who came to Baghdad to serve as instructors to the Iraqi Police Cadets attending the Baghdad Police Academy.

Journal of the Farmer's Club New Delhi : Young Asia Publications

The last decade has seen an explosion in our understanding of how bacterial pathogens trick, cajole, usurp and parasitize their various hosts. This renaissance is due to the convergence of molecular and cellular techniques with the power of microbial genetics. The purpose of this volume is to introduce recent advances in understanding selected systems chosen from both plant and animal hosts of bacterial pathogens. This somewhat nonobvious choice of topics was spurred by the recent findings, detailed by several contributors to this volume, of common systems used to secrete virulence factors from pathogens of both plants and animals. These serendipitous findings underscored the importance of basic research approaches to parallel problems in biology. More importantly, they brought together investigators who may not have otherwise become conversant with each other's experimental systems. I, for one, find the kinds of synergism reflected in a volume of this sort to be one of the most pleasant aspects of science and hope that the reader, whether a newcomer to the field or an expert, can find a new slant to old problems in the reviews contained here. It was, however, necessary to limit volume length, and this has forced the exclusion of a number of fascinating bacterial pathosystems.
