Linguists with no background in statistics will find this book to be an accessible introduction to statistics. Concepts are explained in non-technical terms, and mathematical formulas are kept to a minimum. The book incorporates SPSS, which is a statistics package that incorporates a point and click interface rather than complex line-commands. Step-by-step instructions are provided for some of the most widely used statistics in linguistics. At the same time, the concepts behind each procedure are also explained. Traditional analyses such as ANOVA and t-tests are included in the book, but linguistic data is often not amenable to such analyses. For this reason, non-parametric and mixed-effects procedures are also introduced.

Neuropsychological Evaluation of the Spanish Speaker Multilingual Matters

This book on applied linguistics presents new trends and improvements on the teaching of Spanish. It deals with two major scopes in the field of linguistics that have a crucial role in the development of language teaching in general and of the teaching of Spanish in particular: Interaction and Grammar. The topics chosen coincide with the areas in which the communicative approach to language teaching, dominant in European and American language programs since the 1970s and 80s, has been the object of most revision. In its first part, the book appeals both to pragmatics and to discourse analysis to research the specifics of classroom discourse and classroom interaction, as well as the differences between interactions among Spanish native speakers and interactions among non natives, in order to develop methodologies for the effective incorporation of these aspects to the Spanish language classroom, such as tasks to teach interaction or techniques to implement learner-centered interactive class dynamics and cooperative learning. In its second part, this book reviews the pedagogical advantages of language description based on Cognitive Linguistic theory to explain different aspects of Spanish grammar. The main purpose of our contribution is to show how taking different dimensions of construal and perspective in linguistic representations into account helps teachers to elucidate idiosyncratic and subtle contrasts of Spanish structure that other views and approaches cannot clarify on a meaningful base, such as the aspectual opposition between preterits or the modal opposition between indicative and subjunctive, both of high importance for the English speaking student. The work selected for this book, by experts from Columbia University and from several universities in Spain, represents the most current lines of inquiry in this "post-communicative" approach as applied specifically to the teaching of Spanish. This book seeks to be to be a "must-read" for the present and future. It tackles unexplored territory, for journals and applied linguistics collections have mainly addressed these problems in relation to English language and instruction. Defining the construct of interaction for paired assessment purposes has been difficult, despite the evolution of our view of language to include the social perspective of co-construction, and the fact that such discourse is increasingly taught and assessed. In this volume three sequenced studies define interaction in paired oral assessment through the verbal protocols of learners of Spanish and their assessors. Assessors then scale performances from videoed test performance data resulting in the development of an evidence based rating process which includes non-verbal interpersonal communication, interactive listening and interactional management.
