From Research to Implementation

National Academies Press

Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth,

children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts

parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of

family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Could CRT provide the first structured method of alleviating cognitive deficits associated with schizophrenia? *Cognitive Remediation Therapy for Schizophrenia* describes the background and development of this new psychological therapy and demonstrates how it provides the first structured help to overcome the thinking problems associated with schizophrenia. In three sections, the book covers the theoretical and empirical underpinning of cognitive remediation therapy and explores its application. Part I, 'The Development of Therapy', provides the historical context and theoretical background to the therapy and

emphasizes the value of rehabilitating cognitive deficits. In Part II, 'Improving Cognitive Processes', the process and effects of changing cognition are examined. Finally, in Part III, 'The Process of Therapy', the authors provide a clinical guide to the delivery of cognitive remediation therapy and use case examples to support its efficacy. This book is the first to describe an individual cognitive remediation therapy programme based on a clear model of the relationship between thinking and behaviour. It will be of both academic and clinical value to all those health professionals and clinical academics who want not only to understand the relationships between thought and action but also to intervene to improve therapy.
