Renowned academics compare major features of imperial rule in the 19th century, reflecting a significant shift away from nationalism and toward empires in the studies of state building. The book responds to the current interest in multi-unit formations, such as the European Union and the expanded outreach of the United States. National historical narratives have systematically marginalized imperial dimensions, yet empires play an important role. This book examines the methods discerned in the creation of the Habsburg Monarchy, the Ottoman Empire, the Hohenzollern rule and Imperial Russia. It inspects the respective imperial elites in these empires, and it details the role of nations, religions and ideologies in the

legitimacy of empire building, bringing the Spanish Empire into the analysis. The final part of the book focuses on modern empires, such as the German "Reich." The essays suggest that empires were more adaptive and resilient to change than is commonly thought.

Handbook of Research on Emerging Developments and Environmental Impacts of Ecological Chemistry Capital Books

This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German

armoured supremacy in the early years of the Second World War.

Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

This book presents an ethnographic description and sociological interpretation of the 'football gatherings' that evolved out of central Romania in the late twentieth century. In the 1980's, Romanian public television did not broadcast football mega-events for economic and political reasons. In response, masses of people would leave their homes and travel into the mountains to pick-up the TV broadcast from neighbouring countries. The phenomenon grew into a social institution with a penetrating force: it produced an alternative social space and a dissident public that pointed to a form of resistance taking place through football.

Forbidden Football in Ceausescu's Romania provides an insight into the everyday life under the pressure of dictatorship and, through the special patterns of sports consumption, it tells a social history through small individual stories related to football.

This book examines on an

international basis how small and medium-sized enterprises (SMEs) cope with the changing economic and social challenges, which are also reflected in financial and non-financial reporting. To this end, it presents six case studies from Germany, Hungary, Romania, Poland, Italy, and the United Kingdom, with a particular focus on integrated reporting (IR). The cases presented are drawn from collaborative research within the international network of INTEREST, an international project on integrated reporting for SME transparency. The book will be of interest to researchers and practitioners.

In recent decades, considerable European investment has been devoted to the training of language assistants, full-time teaching staff and mentors, while the new figure of the professional "language teacher

trainer" (LTT) has emerged. It is becoming increasingly important that future LTTs are not simply more expert teachers, or scholars competent in the various relevant disciplines, but professionals who are aware of their role, who know the development of teacher training in Europe and beyond, and who are able to compare various experiences in different training contexts. This volume is aimed at LTTs who wish to become aware of the main issues, tools and research now available for their daily practice and professional role, and for lecturers who teach prospective language teachers. Language teachers with long experience might also find useful information on how they can develop into LTTs. The book also offers an overview of recent European projects that could be relevant to principals of language departments who are involved in the assessment and performance management of their staff. Finally, the volume contains research suggestions for academic and PhD students who are investigating current issues in language

teaching methodology, teacher training, lifelong learning and professional development.

Man's Rise to

Civilization

Central European University Press

It is the early Cold War.

The Soviet Union appears to be in irresistible ascendance and moves to exploit the Olympic Games as a vehicle for promoting international communism. In response, the United States conceives a subtle, far-reaching psychological warfare campaign to blunt the Soviet advance.

Drawing on newly declassified materials and archives, Toby C. Rider chronicles how the U.S. government used the Olympics to promote democracy and its own policy aims during the tense early phase of the Cold War. Rider shows how the government, though constrained by traditions against interference in the Games, eluded detection by cooperating with

private groups, including secretly funded émigré organizations bent on liberating their home countries from Soviet control. At the same time, the United States utilized Olympic host cities as launching pads for hyping the American economic and political system. Behind the scenes, meanwhile, the government attempted clandestine manipulation of the International Olympic Committee. Rider also details the campaigns that sent propaganda materials around the globe as the United States mobilized culture in general, and sports in particular, to fight the communist threat. Deeply researched and boldly argued, *Cold War Games* recovers an essential chapter in Olympic and postwar history.

This volume is the first international collection of the best physics problems (both theoretical and experimental) given at the national physics competitions for high school students in different countries. The book introduces the short history of the

International Physics Olympiad, the Statutes, the Syllabus, the statistical data including complete list of winners and a collection of national reports. Each of the national report will contains — as a main part — the best theoretical and experimental problems (with complete solutions) given at the national competition or at the training of the team before the international competition. Taking into account that at present the International Physics Olympiad involves about 35 countries, we are sure that the book will be interesting for everybody involved with physics education not only with the physics olympiads.

This volume gathers recent research findings in the field of foreign language (FL) teaching in Romanian higher education dwelling on both methodology and students' learning outcomes. The book satisfies the need for an up-to-date overview of FL teaching in Romanian universities in the European context as well as from a global international perspective. This book confers visibility to Romanian foreign language scholars' research and it opens new paths for debate and collaboration worldwide. The scholars included in this volume have extensive expertise in the field of foreign language teaching and research in higher education which is supported by their international recognition as specialists in their specific areas. The contributing authors approach their respective chapters relying on both qualitative and quantitative research. Their experience and

conclusions will prove helpful for any foreign language professional working in tertiary education.

oUTER-aRT is a movement set up by Florentin Smarandache in 1990's (as a protest against random modern art, where anything could mean... art!) and consists in making art as ugly as possible, as wrong as possible, or as silly as possible, and generally as impossible as possible! It is an upside-down art!... to do art in the way it is not supposed to be done... Manifestos and anti-manifestos, essays, interviews, together with a printed oUTER-aRT Gallery are to be found in this (outer-)album of (outer-)painting, (outer-)drawings, (outer-)collages, (outer-)photos. In the age of digitization our society is transformed into a new state. In particular, machine intelligence dramatically

elevates our capability to create and digest information. Naturally, healthcare is also impacted by this trend and will even be more transformed into a informatic driven discipline in the future. In the most important area of histo-pathology, the interpretation of tissue slices from cancer patients, informatics will have an early and huge impact on treatment decisions and probably will act as the leading discipline for this transformation in medicine. Tissue Phenomics provides a comprehensive methodology aiming at the discovery of the most accurate tissue-based decision support algorithm by close integration of assay development, image analysis and bioinformatics, and optimization feedback loops. In this book the methodology of Tissue Phenomics and its benefits and wealth's are described. The different components of Tissue Phenomics are explained in the different chapters. In the chapters 2 to 4 of this book different authors describe various approaches on how to convert the wealth of

tissue slide pixel data into mineable information using knowledge-based and data-driven image analysis methods. Subsequently, the datafication of images and the bioinformatics part plays a crucial role in generating prognostic and predictive models for disease progression. The integration of other data sources such as genomics, radiomics and patient related information is also important and is described as well. As discussed in chapters 5 and 6, these models may classify patients in distinct groups such as those responding to a given therapy. Since Tissue Phenomics provides a huge set of potentially prognostic features (phenes), one focus of both chapters is robust feature selection methods by advanced Monte-Carlo cross validation algorithms. In chapter 7 we discuss multiple application examples of Tissue Phenomics in academic and commercial settings and its tremendous impact to advances in biomedical sciences. Building on the successes in research, chapters 8 and 9 discuss applications in clinical environments and provide

a flavor to the future envision in chapter 10, where tissue datafication and subsequent patient profiling is part of every routine examination, with the goal to best match patients with the most successful therapy, as predicted by tissue phenes.

 In contrast to other books devoted to the averaging method and the method of integral manifolds, in the present book we study oscillation systems with many varying frequencies. In the process of evolution, systems of this type can pass from one resonance state into another. This fact considerably complicates the investigation of nonlinear oscillations. In the present monograph, a new approach based on exact uniform estimates of oscillation integrals is proposed. On the basis of this approach, numerous completely new results on the justification of the averaging method and its applications are obtained

and the integral manifolds of resonance oscillation systems are studied. This book is intended for a wide circle of research workers, experts, and engineers interested in oscillation processes, as well as for students and post-graduate students specialized in ordinary differential equations.

 A healthy work-life balance has become increasingly important to people trying to cope with the pressures of contemporary society. This trend highlights the fallacy of assessing well-being in terms of finance alone; how much time we have matters just as much as how much money. The authors of this book have developed a novel way to measure 'discretionary time': time which is free to spend as one pleases. Exploring data from the US, Australia, Germany, France, Sweden and Finland, they show that temporal autonomy varies substantially across different countries and under different living conditions. By calibrating how much control people have over their time, and how much they could

have under alternative welfare, gender or household arrangements, this book offers a new perspective for comparative cross-national enquiries into the temporal aspects of human welfare.

FORBIDDEN FOOTBALL IN CEAUSESCU'S ROMANIA

Every five years from 1955 to 1985, mass Czechoslovak gymnastic demonstrations and sporting parades called Spartakiads were held to mark the 1945 liberation of Czechoslovakia. Involving hundreds of thousands of male and female performers of all ages and held in the world's largest stadium—a space built expressly for this purpose—the synchronized and unified movements of the Czech citizenry embodied, quite literally, the idealized Socialist people: a powerful yet pliant force directed by the regime. This book explores the political, social, and aesthetic dimensions of these mass physical demonstrations, with a particular focus on their

roots in the völkisch nationalism of the German Turner movement and the Czech Sokol gymnastic tradition. Featuring an abundance of photographs, Spartakiads takes a new approach to Communist history by opening a window onto the mentality and mundanity behind the Iron Curtain.
