Preliminary Report on Land Planning and Classification of the Public Domain Lands as Relates to the Montana Pumping Division Area of the Program of the Bureau of Reclamation Princeton University Press

John Friedmann addresses a central question of Western political theory: how, and to what extent, history can be guided by reason. In this comprehensive treatment of the relation of knowledge to action, which he calls planning, he traces the major intellectual traditions of planning thought and practice. Three of these--social reform, policy analysis, and social learning--are primarily concerned with public management. The fourth, social mobilization, draws on utopianism, anarchism, historical materialism, and other radical thought and looks to the structural transformation of society "from below." After developing a basic vocabulary in Part One, the author proceeds in Part Two to a critical history of each of the four planning traditions. The story begins with the prophetic visions of Saint-Simon and assesses the contributions of such diverse thinkers as Comte, Marx, Dewey, Mannheim, Tugwell, Mumford, Simon, and Habermas. It is carried forward in Part Three by Friedmann's own nontechnocratic, dialectical approach to planning as a method for recovering political community.

ANALYSIS AND STRATEGY

Forgotten Books

Land Planning and Classification Report of the Public Domain Lands Forgotten Books

This report of the Upper Missouri River Basin presents a preliminary analysis of the physical and economic features of the area in Montana and Wyoming embraced within the headwaters of the Missouri River tributary to Canyon Ferry Dam which is located near Helena, Montana. The purpose is to describe pertinent features which relate to the program for the development and use of the public domain lands in the comprehensive resource development program for the Missouri River Basin. The report is intended to serve as a guide in carrying out detailed studies of problems pertaining to the use and management of approximately one and one-quarter million acres of public lands administered by the Bureau of Land Management in furtherance of the integrated comprehensive resource developmental program of the Department of the Interior in the Missouri River Basin. The appended map of the Upper Missouri River Basin shows the location of land in different types of ownership.

Public Domain, Conservation, Great Plains, National Resources Planning Board; June 1945 Forgotten Books

Excerpt from Preliminary Land Planning and Classification Report of the Public Domain Lands in Marias River Area, Montana: Region III Billings, Montana Preliminary analysis and field reconnaissance indicates more detailed studies are necessary Within the above areas to properly classify the public lands and their resources and ascertain their place and relationship to the overall development programs in the area. These studies will determine the value or significance of these lands for watershed, grazing, wildlife and recreational uses. Those public lands, outside of the sub-areas are generally grazing lands and primarily valuable for use in connection with privately owned lands. However, detailed examination of each tract is necessary to determine whether the lands are needed in connection With any public land program and if not, appraise each parcel in order that they can be disposed of at public sale. Preliminary Land Planning and Classification Report of the Public Domain Lands in Marias River Area, Montana Forgotten Books

In search of new public domain is a report of an intensive quest to establish the preconditions for the design of new public spaces. On the basis of an analysis of the cultural geography of the network city, the authors develop a new perspective of cultural exchange as a typical urban quality. They are critical of the laments about the decline of the city and public space, as much as of a naive faith in architecture and urbanism as saving graces. A critical investigation of the new collective spaces that are popping up across the whole of the urban field offers an insight into the factors that facilitate the development of new public domain. Through their clarification of the theoretical background and analysis of topical issues such as public safety and social segregation, the authors offer insights and instruments for policy-makers and designers who are confronted with the new task of the design of public domain in the network city.

Land Planning and Classification Report of the Public Domain Lands in the Moreau River Basin, South Dakota.

Excerpt from Land Planning and Classification Report of the Public Domain Lands in the Big Dry Montana Pumping Area, Montana: A Missouri River Basin Investigation, for Administrative Use Only This publication is the 36th in a series of 36 reports prepared by the Missouri Basin field group of the Bureau of Land Management in support of the Missouri River project. That project, which is a basin development program of the Department of the Interior, has its basic authority in the Flood Control Act of 1944. This report presents summarized information of the background and detailed studies on which specific problems were considered and recommendations made for the management and tenure of the public domain lands. The purpose of the detailed study of each tract is to promote its use in the best interests of the public, compatible with proper conservation practices. Public agencies, both federal and local, interested in utilizing these lands are told of their location, description, and prospective utility by two means; this report, and the detailed accounts of each isolated tract.
