Pediatric and Congenital Cardiac Care Pearson Education India
 In Citizenship and Advocacy in Technical Communication, teachers, researchers, and practitioners will find a variety of theoretical frameworks, empirical studies, and teaching approaches to advocacy and citizenship. Specifically, the collection is organized around three main themes or sections: considerations for understanding and defining advocacy and citizenship locally and globally, engaging with the local and global community, and introducing advocacy in a classroom. The collection covers an expansive breadth of issues and topics that speak to the complexities of undertaking advocacy work in TPC, including local grant writing activities, cosmopolitanism and global transnational rhetoric, digital citizenship and social media use, strategic and tactical communication, and diversity and social justice. The contributors themselves, representing fifteen academic institutions and occupying various academic ranks,

offer nuanced definitions, frameworks, examples, and strategies for students, scholars, practitioners, and educators who want to or are already engaged in a variegated range of advocacy work. More so, they reinforce the inherent humanistic values of our field and discuss effective rhetorical and current technological tools at our disposal. Finally, they show us how, through pedagogical approaches and everyday mundane activities and practices, we (can) advocate either actively or passively.

Programs in technical writing, technical communication, and/or professional communication have recently grown in enrollment as the demand among employers for formally prepared technical writers and editors has grown. In response, scholarly treatments of the subject and the teaching of technical writing are also burgeoning, and the body of research and theory being published in this field is many times larger and more accessible than it was even a decade ago. Although many theoretical and disciplinary perspectives can potentially inform technical communication teaching, administration, and curriculum development, the actual influences on the field's canonical texts have traditionally come from a rather limited range of disciplines. *Innovative Approaches to Teaching Technical Communication* brings together a wide range of scholars/teachers to expand the existing canon.
