 Learn how to code while you write programs that effortlessly perform useful feats of automation! The second edition of this international fan favorite includes a brand-new chapter on input validation, Gmail and Google Sheets automations, tips for updating CSV files, and more. If you've ever spent hours renaming files or updating spreadsheet cells, you know how tedious tasks like these can be. But what if you could have your computer do them for you? Automate the Boring Stuff with Python, 2nd Edition teaches even the technically uninclined how to write programs that do in minutes what would take hours to do by hand—no prior coding experience required! This new, fully revised edition of Al Sweigart's bestselling Pythonic classic, Automate the Boring Stuff with Python, covers all the basics of Python 3 while exploring its rich library of modules for performing specific tasks, like scraping data off the Web, filling out forms, renaming files, organizing folders, sending email responses, and merging, splitting, or encrypting PDFs. There's also a brand-new chapter on input validation, tutorials on automating Gmail and Google Sheets, tips on automatically updating CSV files, and other recent feats of automations that improve your efficiency. Detailed, step-by-step instructions walk you through each program, allowing you to create useful tools as you build out your programming skills, and updated practice projects at the end of each chapter challenge you to improve those programs and use your newfound skills to automate similar tasks. Boring tasks no longer have to take to get through—and neither does learning

 LinkedIn operates the world's largest professional network on the Internet with more than 332 million members in over 200 countries and territories. Dr. Strickland been a LinkedIn Premium member since November 2, 2010. At the time of this publication he has 4,250 followers who view his posts on a regular basis. This book is a collection of his most popular post for the year 2014. I have posted articles on a variety of topics, usually something I am quite passionate about, like professionalism, etiquette, analytical science, leadership, and so on. Post titles include, ""LinkedIn Random Acts of Kindness,"" ""Three Things Leaders Must Do,"" ""The Last Full Measure of Devotion,"" ""To Teach or not to Teach,"" and ""If You Hate Probability Theory, You are in Good Company."" I enjoy the interaction that I have with over 4,000 connections from 59 countries, if I include the Republic of Texas. This book is for them, but also for those friends and colleagues who do not frequent the network as much as I do. [I'm on LinkedIn--Now What??? \(Fourth Edition\)](#) Workman

The fundamental mathematical tools needed to understand machine learning include linear algebra, analytic geometry, matrix decompositions, vector calculus, optimization, probability and statistics. These topics are traditionally taught in disparate courses, making it hard for data science or computer science students, or professionals, to efficiently learn the mathematics. This self-contained textbook bridges the gap between mathematical and machine learning texts, introducing the mathematical concepts with a minimum of prerequisites. It uses these concepts to derive four central machine learning methods: linear regression, principal component analysis, Gaussian mixture models and support vector machines. For students and others with a mathematical background, these derivations provide a starting point to machine learning texts. For those learning the mathematics for the first time, the methods help build intuition and practical experience with applying mathematical concepts. Every chapter includes worked examples and exercises to test understanding. Programming tutorials are offered on the book's web site.

Practical UML Statecharts in C/C++ Second Edition bridges the gap between high-level abstract concepts of the Unified Modeling Language (UML) and the actual programming aspects of modern hierarchical state machines (UML statecharts). The book describes a lightweight, open source, event-driven infrastructure, called QP that enables direct manual coding UML statecharts and concurrent event-driven applications in C or C++ without big tools. This book is presented in two parts. In Part I, you get a practical description of the relevant state machine concepts starting from traditional finite state automata to modern UML state machines followed by state machine coding techniques and state-machine design patterns, all illustrated with executable examples. In Part II, you find a detailed design study of a generic real-time framework indispensable for combining concurrent, event-driven state machines into robust applications. Part II begins with a clear explanation of the key event-driven programming concepts such as inversion of control (Hollywood Principle), blocking versus non-blocking code, run-to-completion (RTC) execution semantics, the importance of event queues, dealing with time, and the role of state machines to maintain the context from one event to the next. This background is designed to help software developers in making the transition from the traditional sequential to the modern event-driven programming, which can be one of the trickiest paradigm shifts. The lightweight QP event-driven infrastructure goes several steps beyond the traditional real-time operating system (RTOS). In the simplest configuration, QP runs on bare-metal microprocessor, microcontroller, or DSP completely replacing the RTOS. QP can also work with almost any OS/RTOS to take advantage of the existing device drivers, communication stacks, and other middleware. The accompanying website to this book contains complete open source code for QP, ports to popular processors and operating systems, including 80x86, ARM Cortex-M3, MSP430, and Linux, as well as all examples described in the book.

World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity

from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

What do Disney, Bollywood, and "The Batkid" teach us about how to create celebrity experiences for our audience? How can a vending machine inspire world peace? Can being "imperfect" make your business more marketable? Can a selfie improve one's confidence? When can addiction be a good thing? The answers to these questions may not be all that obvious. And that's exactly the point. For the past four years, marketing expert and Georgetown University Professor Rohit Bhargava has curated his best-selling list of "non-obvious" trends by asking the questions that most trend predictors miss. In this all-new fifth edition, discover what more than half a million other readers already have: how to use the power of non-obvious thinking to grow your business and make a bigger impact in the world. "Non-Obvious" also delves into the curation process the author has used for

years to build his trend reports and takes readers behind the scenes of "trend curation" -- the art of adding meaning to isolated beautiful things. In the end "Non-Obvious" is a book that will show you how to think different, curate your ideas and get better at predicting what will be important tomorrow based on learning to observe patterns in the world today. -- From publisher's description.

The next twenty years will be completely unlike the last twenty years. The world is in economic crisis, and there are no easy fixes to our predicament. Unsustainable trends in the economy, energy, and the environment have finally caught up with us and are converging on a very narrow window of time—the "Twenty-Teens." The *Crash Course* presents our predicament and illuminates the path ahead, so you can face the coming disruptions and thrive--without fearing the future or retreating into denial. In this book you will find solid facts and grounded reasoning presented in a calm, positive, non-partisan manner. Our money system places impossible demands upon a finite world. Exponentially rising levels of debt, based on assumptions of future economic growth to fund repayment, will shudder to a halt and then reverse. Unfortunately, our financial system does not operate in reverse. The consequences of massive deleveraging will be severe. Oil is essential for economic growth. The reality of dwindling oil supplies is now internationally recognized, yet virtually no developed nations have a Plan B. The economic risks to individuals, companies, and countries are varied and enormous. Best-case, living standards will drop steadily worldwide. Worst-case, systemic financial crises will toss the world into jarring chaos. This book is written for those who are motivated to learn about the root causes of our predicaments, protect themselves and their families, mitigate risks as much as possible, and control what effects they can. With challenge comes opportunity, and *The Crash Course* offers a positive vision for how to reshape our lives to be more balanced, resilient, and sustainable.

A comprehensive guide to creating dynamic, successful, and innovative library programs that cater to the specialized needs of older adults—an important and growing user group. *Crash Course in Library Services for Seniors* provides a refreshingly positive approach to working with older adults—one that focuses on the positive effects of aging on patrons, and the many opportunities that libraries can create for themselves by offering top-notch services delivered with a concierge mindset. The book offers page after page of great programming ideas specifically for reaching out to Baby Boomers and older customers—a population that is predicted to double over the next 20 years. Organized in only six chapters, this easy-to-read book provides practical suggestions for making any library a welcoming place for older adults, covering topics such as assessment, planning, programming, services, marketing, and evaluation. This title will be invaluable to public librarians interested in expanding and improving their current programming for older adults within their community, and for those looking to create entirely new programming for seniors.

"I'm on LinkedIn--Now What???" (Fourth Edition)" is regularly referred to as "the bible on LinkedIn" because it was one of the first LinkedIn books in print. At the present time, it is the only LinkedIn book in the fourth edition. This LinkedIn book is designed to help you get the most out of LinkedIn, which has become the most popular business networking site. It is one of "the big three" in the social networking space, along with Facebook and Twitter.

This new edition focuses on strategies and tactics to help you understand what LinkedIn is and how it fits into your online marketing strategy (whether it is a personal marketing strategy or a business/corporate marketing strategy). The tactics are practical, realistic and respectful of your busy schedule.

This LinkedIn book is a favorite resource of career coaches, marketing directors, social marketing consultants and others who regularly use LinkedIn to reach customers, find important contacts and communicate with them, increase their brand recognition, and help others learn more about them. The strategies and tactics are explained with clear instructions that should last through new changes in LinkedIn, since they are principle-based.

Use LinkedIn to find and develop relationships which can help in your business and personal life. If you are wondering how to use LinkedIn, or if you are not getting as much value as you can out of LinkedIn, this is your resource. Complement this LinkedIn book with the regular blog posts at ImOnLinkedInNowWhat.com to keep up with new changes and ideas.

If you are a professional interested in advancing your career, increasing your business or expanding your opportunities through relationships, this book is for you. It helps you understand and develop an effective online social networking strategy with LinkedIn.

After reading this book, you will walk away with:

1. An understanding of LinkedIn and why you should use it;

2. A set of best practices and tips to get started and to expand your use of LinkedIn and
3. An understanding of how LinkedIn fits into your networking and career strategy.
