Research suggests that as many as a quarter of all undergraduate students may find themselves on academic probation during their collegiate years. If students on probation choose to return to their institutions the semester following notification, they find themselves in a unique transitional

period between poor academic performance and either dismissal or recovery. Effectively supporting students through this transition may help to decrease equity gaps in higher education. As recent literature implies, the same demographic factors that affect students' retention and persistence rates (e.g., gender, race and ethnicity, age) also affect the rate at which students find themselves on academic probation. This book serves as a resource for practitioners and institutional leaders. The volume presents a variety of interventions and institutional strategies for supporting the developmental and emotional needs of students on probation in the first year and beyond. The chapters in this book are the result of years of dedication and passion for supporting students on probation by the individual chapter authors. While the chapters reflect a culmination of combined decades of personal experiences and education, collectively they amount to the beginning of a conversation long past due. Scholarship on the impact of academic recovery models on student success and persistence is limited. Historically, attention and resources have been directed toward establishing and strengthening the first-year experience, sophomore programs, and student-success efforts to prevent students from ending up on academic probation. However, a focus on preventative measures without a consideration of academic recovery program design considering the successes of these programs is futile. This volume should be of interest to academics and practitioners focused on creating or refining institutional policies and interventions for students on academic probation. The aim is to provide readers with the language, tools, and theoretical points of view to advocate for and to design, reform, and/or execute high-quality, integrated academic recovery programs on campus. Historically, students on probation have been an understudied and underserved population, and this volume serves as a call to action. *Concepts of Biology* Createspace Independent Publishing Platform Providing an intellectual interpretation to the work of Edwidge Danticat, this new edited collection provides a pedagogical approach to teach and interpret her body of work in undergraduate and graduate classrooms. Approaches to Teaching the Works of Edwidge Danticat starts out by exploring diasporic categories and postcolonial themes such as gender constructs, cultural nationalism, cultural and communal identity, and moves to investigate Danticat's human rights activism, the immigrant experience, the relationship between the particular and the universal, and

the violence of hegemony and imperialism in relationship with society, family, and community. The Editors of the collection have carefully compiled works that show how Danticat's writings may help in building more compassionate and relational human communities that are grounded on the imperative of human dignity, respect, inclusion, and peace.

The book presents research works developed within the Anthropological Theory of the Didactic (ATD) by senior and young researchers that participated in the Intensive Research Program "Advances in the anthropological theory of the didactic and their consequences in curricula and teacher education" held at the Centre de Recerca Matemàtica (CRM) in Barcelona. It is organized in three axes of current research on the ATD: teacher education and the professionalization of teaching; the curriculum problem in the historical transition from the classical paradigm of visiting works to the emerging didactic paradigm of questioning the world; and research in didactics at the university level.

"Deserves a spot next to Fast Food Nation and To Kill a Mockingbird in America's high school curriculums. To say it may save lives is self-evident." —New York Times Book Review (Editor's Choice) NEW YORK TIMES BESTSELLER • A BEST BOOK OF THE YEAR: San Francisco Chronicle, Christian Science Monitor, Kirkus, Winnipeg Free Press One of the decade's most original and masterfully reported books, *A Deadly Wandering* by Pulitzer Prize-winning New York Times journalist Matt Richtel interweaves the cutting-edge science of attention with the tensely plotted story of a mysterious car accident and its aftermath to answer some of the defining questions of our time: What is technology doing to us? Can our minds keep up with the pace of change? How can we find balance? On the last day of summer, an ordinary Utah college student named Reggie Shaw fatally struck two rocket scientists while texting and driving along a majestic stretch of highway bordering the Rocky Mountains. *A Deadly Wandering* follows Reggie from the moment of the tragedy, through the police investigation, the state's groundbreaking prosecution, and ultimately, Reggie's wrenching admission of responsibility. Richtel parallels Reggie's journey with leading-edge scientific findings on the impact technology has on our brains, showing how these devices play to our deepest social instincts. A propulsive read filled with surprising scientific detail, riveting narrative tension, and rare emotional depth, *A Deadly Wandering* is a book that can change—and save—lives.

Introducing the reader to grounded methodology and its ethical approach, this book explores the theory behind the method as well as how to use it to develop and evaluate learning and education projects. Grounded methodology is designed to challenge traditional educational research methodologies, and in doing so questions the notion of the need for highly formal research in institutional settings. In this respect, it is also a simple way of planning an educational project that needs an evaluative element. Covering data collection techniques used in the course of education research such as observations, interviews, course development, participant diaries and online data collection, this book investigates the practical realities of researching in education contexts and the differences in educational, national and cultural backgrounds. It is ideal reading for students and academics looking to update and increase their knowledge on grounded methodology, especially students who are researchers in final-year undergraduate or post-graduate level programs, or instructors planning to teach grounded theory or grounded methodology to their own emerging research students.

Bulletin. Revisions OJED/STAR

Research shows that enriching learning experiences such as learning communities, service-learning, undergraduate research, internships, and senior culminating experiences – collectively known as High-Impact Practices (HIPs) – are positively associated with student engagement; deep, and integrated learning; and personal and educational gains for all students – particularly for historically underserved students, including first-generation students and racially minoritized populations. While HIPs' potential benefits for student learning, retention, and graduation are recognized and are being increasingly integrated across higher education programs, much of that potential remains unrealized; and their implementation frequently uneven. Colleges are eager to use the HIP nomenclature for recruitment, promoting equity for traditionally underserved student populations, and preparing lifelong learners and successful professionals. However, HIPs defy easy categorization or standardized implementation. They rely on fidelity, quality, and consistency – being "done well" – to achieve their learning outcomes; and, above all, require attention to access and equity if they are to fulfill their promise of benefitting all student populations equally. The goal of *Delivering on the Promise of High-Impact Practices* is to provide examples from around the country of the ways educators are advancing equity, promoting fidelity, achieving scale, and strengthening assessment of their own local high-impact practices. Its chapters bring together the best current scholarship, methodologies, and evidence-based practices within the HIPs field, illustrating new approaches to faculty professional development, culture and coalition building, research and assessment, and continuous improvement that help institutions understand and extend practices with a demonstrated high impact. For proponents and practitioners this book offers perspectives, data and critiques to interrogate and improve practice. For administrators it provides an understanding of what's needed to deliver the necessary support.

Woodcarving Illustrated Issue 82 Spring 2018 Princeton University Press

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being

mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, *Concepts of Biology* is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of *Concepts of Biology* is that instructors can customize the book, adapting it to the approach that works best in their classroom. *Concepts of Biology* also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand—and apply—key concepts.
