Intermediate Microeconomics: A Modern Approach MIT Press

An anthology of works on the philosophy of economics, including classic texts and essays exploring specific branches and schools of economics. Completely revamped, this edition contains new selections, a revised introduction and a bibliography. The volume contains 26 chapters organized into five parts: (I) Classic Discussions, (II) Positivist and Popperian Views, (III) Ideology and Normative Economics, (IV) Branches and Schools of Economics and Their Methodological Problems and (V) New Directions in Economic Methodology. It includes crucial historical contributions by

figures such as Mill, Marx, Weber, Robbins, Knight, and Veblen and works by most of the leading contemporary figures writing on economic methodology, including five Nobel Laureates in Economics.

The Philosophy of Economics Macmillan Higher Education

Models in Microeconomic Theory covers basic models in current microeconomic theory. Part I (Chapters 1-7) presents models of an economic agent, discussing abstract models of preferences, choice, and decision making under uncertainty, before turning to models of the consumer, the producer, and monopoly. Part II (Chapters 8-14) introduces the concept of equilibrium, beginning, unconventionally, with the models of the jungle and an economy with indivisible goods, and continuing with models of an exchange economy, equilibrium with rational expectations, and an economy with

asymmetric information. Part III (Chapters 15-16) provides an introduction to game theory, covering strategic and extensive games and the concepts of Nash equilibrium and subgame perfect equilibrium. Part IV (Chapters 17-20) gives a taste of the topics of mechanism design, matching, the axiomatic analysis of economic systems, and social choice. The book focuses on the concepts of model and equilibrium. It states models and results precisely, and provides proofs for all results. It uses only elementary mathematics (with almost no calculus), although many of the proofs involve sustained logical arguments. It includes about 150 exercises. With its formal but accessible style, this textbook is designed for undergraduate students of microeconomics at intermediate and advanced levels.

Microeconomics/Macroeconomics

Questions Oxford University Press, USA Enriching contents of the book in the Second Edition, the author proffers a thoroughly revised and updated text with main focus on Game Theory, Linear Programming and Output-Input Analysis. Besides he gives due weightage to the topics on International Trade, Decision Theory, Pricing Policies in Practice and Basics of Econometrics for Estimation of Economic Functions—by introducing them as independent chapters in the present

edition. The concepts have been introduced keeping decision-makers in mind, who may be associated with the corporate world or pursuing management courses offered by various institutes in India and abroad. The mathematical treatment of the topics, which is one of the distinguishing features of the book, is facilitated in a student-friendly approach. Primarily intended for the undergraduate and postgraduate students of commerce, economics and management, the book is a comprehensive text in accordance with the syllabi of B.Com, B.Sc (Economic Hons.), M.Com, M.A. (Economics) and Master of Business Economics (MBE) courses. Besides academic pursuits, the book will also be useful for the aspirants of competitive examinations such as Indian Administrative Services (IAS), Provincial Civil Services (PCS), and Indian Economic Services (IES).

The Big Questions Approach Bookboon
In this book, Professor Kreps presents a first course on the basic models of choice theory that underlie much of economic theory. This course, taught for several years at the Graduate School of Business, Stanford University, gives the student an introduction to the axiomatic method of economic analysis, without placing too heavy a demand on mathematical sophistication. The course begins with the basics of choice and revealed preference theory and then discusses numerical representations of ordinal preference. Models with uncertainty come next: First is von Neumann-Morgenstern utility, and then choice under uncertainty with subjective uncertainty, using the formulation of Anscombe and Aumann,

and then sketching the development of Savage's classic theory. Finally, the course delves into a number of special topics, including de Finetti's theorem, modeling choice on a part of a larger problem, dynamic choice, and the empirical evidence against the classic models.
