Description

PowerPoint for Teachers CRC Press

This book discusses 14 model organisms and are used by thousands of researchers, teachers, and students each year in laboratories and classrooms, around the globe. Though acknowledged in innumerable scientific journal articles, little is generally known about the origin of these collections, how the organisms contained within them have been acquired, and how they are maintained and distributed. While some collections such as *Drosophila* have long histories others, such as the collection of *Brachionus*, are relatively new. They vary greatly in size. Yet, all have contributed and are continuing to contribute to global research efforts in many areas of scientific research as diverse as tissue regeneration, skin cancer, evolution, water purity, gene function, and hundreds of others. In addition to providing the raw materials for national and international research programs, these collections also provide educational tools used by colleges and high schools. The chapters in this book attempt to provide a brief look at the individual organisms, how they came to be accepted as model organisms, the history of the individual collections, examples of how the organisms have been and are being used in scientific research, and a description of the facilities and procedures used to maintain them. Features: • Provides an in-depth look at the collections of 14 model organisms that have enabled innumerable scientific breakthroughs over decades, and that continue to do so. • Includes detailed descriptions of the operating procedures used for the maintenance of each model organism collection. • Discusses the holdings of the collections of model organisms and its relevance to past, current and future scientific research. • Written by the leaders in the field of the management of model organisms.

"This textbook takes a systematic approach to teaching broadcast and multimedia journalism to students. Easy to follow [and] very relatable for students. Visually appealing...Love this textbook." —Beth Bingham Georges, California State University, Fullerton Updated Edition of Bestseller! It's a multimedia world, and today's journalists must develop a multimedia mindset. How does this way of thinking change the newsgathering and news production processes? Having conceived of and written their book in this changed media landscape, broadcast veterans Wenger and Potter seamlessly build on the fundamentals of good news reporting while teaching students to use depth, interactivity and immediacy as they maximize the advantages of each platform. While retaining the book's clear instruction and advice from those in the trenches, *Advancing the Story*, Fourth Edition has been updated to reflect the latest issues and trends with: greater emphasis on social media and mobile media to gather, promote and disseminate news content; expanded coverage of media ethics and media law; extended examples of effective reporting across multiple platforms; updated writing exercises and new resources for reviewing AP style; and additional interviews with journalists at the forefront of industry changes.

"Websites like MapQuest and Google Maps have transformed the way we think about maps. But these services do more than offer driving directions, they provide APIs that web developers can use to build highly customized map-based applications. The author, Adam DuVander, delivers 73 useful scripts, examples that will show you how to create interactive maps and mashups."--[book cover]

James Paul Gee begins his classic book with "I want to talk about video games--yes, even violent video games--and say some positive things about them." With this simple but explosive statement, one of America's most well-respected educators looks seriously at the good that can come from playing video games. In this revised edition of *What Video Games Have to Teach Us About Learning and Literacy*, new games like *World of Warcraft* and *Half Life 2* are evaluated and theories of cognitive development are expanded. Gee looks at major cognitive activities including how individuals develop a sense of identity, how we grasp meaning, how we evaluate and follow a command, pick a role model, and perceive the world.

When children with learning challenges are identified, the educational community in the United States diligently applies a well-established model of remediation that has, for the most part, yielded positive results. Research, however, has demonstrated that the American perception of disability may vary from those in Eastern cultures. These cultural differences can play a significant role in the failure to achieve learning success on behalf of children from the Middle East, North Africa, and Southwest Asian (MENASWA) families. It is critical for the school community to recognize and acknowledge these differences and bring them into alignment in order to meet these students' learning needs. *Learning Challenges for Culturally and Linguistically Diverse (CLD) Students With Disabilities* is an essential reference publication that identifies ways in which CLD families can be involved with schools to help build educators' cultural competence and explores the idea of disabilities as a social model with a focus on strengths rather than a medical model focused on needs and weaknesses. Featuring coverage on a wide range of topics including racial identity, leadership wisdom, and family-school collaboration, this book is ideally designed for educators, principals, administrators, curriculum developers, instructional designers, policymakers, advocates, researchers, academicians, and students.

#1 NEW YORK TIMES BESTSELLER • In this, the extraordinary conclusion of the ice-age epic series, *Earth's Children*®, Ayla, Jondalar, and their infant daughter, Jonayla, are living with the Zelandonii in the Ninth Cave. Ayla has been chosen as an acolyte to a spiritual leader and begins arduous training tasks. Whatever obstacles she faces, Ayla finds inventive ways to lessen the difficulties of daily life, searching for wild edibles to make meals and experimenting with techniques to ease the long journeys the Zelandonii must take while honing her skills as a healer and a leader. And there are the Sacred Caves that Ayla's mentor takes her to see. They are filled with remarkable paintings of mammoths, lions, and bears, and their mystical aura at times overwhelms Ayla. But all the time Ayla has spent in training rituals has caused Jondalar to drift away from her. The rituals themselves bring her close to death, but through them Ayla gains *A Gift of Knowledge* so important that it will change her world. **BONUS:** This edition contains a reading guide and an interview with Jean M. Auel. Sixth in the acclaimed *Earth's Children*® series.

Technology Leadership in Teacher Education: Integrated Solutions and Experiences CQ Press

This book examines a new trend affecting cartography and

geographic information science. Presenting the work of over 30 authors from 16 different countries, the book provides an overview of current research in the new area of Internet Cartography. Chapters deal with the growth of this form of map distribution, uses in education, privacy issues, and technical aspects from the point of view of the map provider - including Internet protocols such as XML and SVG. Many see the Internet as a revolution for cartography. Previously tied to the medium of paper and expensive large-format color print technology, maps had a limited distribution and use. The Internet made it possible to not only distribute maps to a much larger audience but also to incorporate interaction and animation in the display. Maps have also become timelier with some maps of traffic and weather being updated every few minutes. In addition, it is now possible to access maps from servers throughout the world. Finally, the Internet has made historic maps available for viewing to the public that were previously only available in map libraries with limited access. * Provides comprehensive coverage of maps and the internet * Delivers a global perspective * Combines theoretical and practical aspects

The Biological Resources of Model Organisms Good Year Books

If you want to get into developing web sites, the most important thing you'll need is a solid understanding of Hypertext Markup Language, or HTML—the most common language used to write web site content. The most recent version of the language is HTML5, and it contains a whole host of new features to give you more power when creating websites. Foundation HTML5 with CSS3: A Modern Guide and Reference incorporates practical examples to show how to structure data correctly using HTML5, along with styling and layout basics using the latest release of Cascading Style Sheets, CSS3. This book is forward-thinking because all the featured code and techniques are standards-compliant, and it demonstrate best practices—you won't waste your time on outdated, bad techniques. Your web pages will work properly in most web browsers and be accessible to web users with disabilities, easily located using popular search engines, and compact in file size. Even if you already know HTML5 and CSS3 basics, this book will still be useful to you. It features comprehensive reference tables, so you can look up troublesome attributes, codes, and properties quickly and easily.
