Scholars in the exact and

social sciences join literary critics to consider the work of French author Michel Rio and to reflect on literature's place in intellectual discourse in an age dominated by science.

A Rationalist's Guide to a Precisely Arbitrary

Countdown (Revised Edition) Harpercollins

From fads to fungus, baseball to beeswax, Gould always circles back to the great themes of time, change, and history, carrying readers home to the centering theme of evolution.

## **WONDERFUL LIFE**

Harvard University Press  
As always in his popular writing, Gould conveys the ideas that science professionals exchange among themselves, minus only the technical jargon. In the title essay, he details his grandfather's journey from Hungary to America, and in a moving epilogue that has been hailed as a powerful testament, Gould writes about September 11.

**The Spread of Excellence from Plato to Darwin** Harvard

University Press  
In this new edition of Questioning the Millennium, best-selling author Stephen Jay Gould applies his wit and erudition to one of today's most pressing subjects: the significance of the millennium. In 1950 at age eight, prompted by an issue of Life magazine marking the century's midpoint, Stephen Jay Gould started thinking about the approaching turn of the millennium. In this beautiful inquiry into time and its milestones, he shares his interest and

insights with his readers. Refreshingly reasoned and absorbing, the book asks and answers the three major questions that define the approaching calendrical event. First, what exactly is this concept of a millennium and how has its meaning shifted? How did the name for a future thousand-year reign of Jesus Christ on earth get transferred to the passage of a secular period of a thousand years in current human history? When does the new millennium really begin: January 1,

2000, or January 1, 2001? (Although seemingly trivial, the debate over this issue tells an intriguing story about the cultural history of the twentieth century.) And why must our calendars be so complex, leading to our search for arbitrary regularity, including a fascination with millennia? This revised edition begins with a new and extensive preface on a key subject not treated in the original version. As always, Gould brings into his essays a wide range of compelling historical and

scientific fact, including a brief history of millennial fevers, calendrical traditions, and idiosyncrasies from around the world; the story of a sixth-century monk whose errors in chronology plague us even today; and the heroism of a young autistic man who has developed the extraordinary ability to calculate dates deep into the past and the future. Ranging over a wide terrain of phenomena--from the arbitrary regularities of human

calendars to the unpredictability of nature, from the vagaries of pop culture to the birth of Christ--Stephen Jay Gould holds up the mirror to our millennial passions to reveal our foibles, absurdities, and uniqueness--in other words, our humanity.

**The Hedgehog, the Fox, and the Magister's Pox** W. W. Norton & Company

A popular essayist offers his perspective on natural history and the people who have tried to decipher it in this

collection of essays on topics from fake fossils to vanishing planets. Photos.

### **THE STRUCTURE OF EVOLUTIONARY THEORY**

Harvard University Press  
The noted naturalist sheds new light on humankind's fascination with the approaching millennium, offering a collection of scientific and historical essays on the millennium and its significance  
*Reflections in Natural History* W W Norton & Company Incorporated

Ranging as far as the fox and as deep as the hedgehog (the urchin of his title), Stephen Jay Gould expands on geology, biological determinism, "cardboard Darwinism", and evolutionary theory in this lively collection. Drawings.

**Hen's Teeth and Horse's Toes** University-Press.org

Collects forty-four key segments from the late paleontologist and evolutionary biologist's books, papers, and essays, in a collection that

includes an assortment of previously unpublished articles and speeches.

### **Ontogeny and**

Lively and fascinating. . . . Gould] writes beautifully about science and the wonders of nature. Tracy Kidder

The Mismeasure of Man, Ontogeny and Phylogeny, the Hedgehog, the Fox, and the Magister's Pox, Time's Arrow, T Ballantine Books

Examines scientific theories pertaining to the measurement of earth's

history

### **ESSAYS ABOUT BOOKS AND IDEAS**

W W Norton & Company Incorporated

A collection of thirty-five essays--representing the best of the column "This View of Life" from "Natural History"

magazine--focuses on the themes of evolution and of the innumerable oddities of nature

**Books by Stephen Jay Gould** W. W. Norton & Company

Ever Since Darwin, Stephen Jay Gould's first

book, has sold more than a quarter of a million copies. Like all succeeding collections by this unique writer, it brings the art of the scientific essay to unparalleled heights.

### **ALLOMETRY AND SIZE IN ONTOGENY AND PHYLOGENY**

W. W. Norton & Company Gould shows why a more accurate way of understanding our world is to look at a given subject within its own context, to see it as a part of a spectrum of variation and then to

reconceptualize trends as expansion or contraction of this “full house” of variation, and not as the progress or degeneration of an average value, or single thing.

### **REFLECTIONS IN NATURAL HISTORY**

SUNY Press

In his final book, Gould offers a surprising and nuanced study of the complex relationship between our two great ways of knowing: science and the humanities, twin realms of knowledge that have been divided against

each other for far too long.

### **The Burgess Shale and the Nature of History**

W. W. Norton & Company

An illustrated natural history of the earth and its denizens combines the paintings, drawings, and computer-generated images with a chronicle of the world's variegated organisms and species

### **THE PANDA'S THUMB**

W. W. Norton & Company

The world's most revered and eloquent interpreter of evolutionary ideas offers here a work of

explanatory force unprecedented in our time—a landmark publication, both for its historical sweep and for its scientific vision. With characteristic attention to detail, Stephen Jay Gould first describes the content and discusses the history and origins of the three core commitments of classical Darwinism: that natural selection works on organisms, not genes or species; that it is almost exclusively the mechanism of adaptive evolutionary change; and that these changes are

incremental, not drastic. Next, he examines the three critiques that currently challenge this classic Darwinian edifice: that selection operates on multiple levels, from the gene to the group; that evolution proceeds by a variety of mechanisms, not just natural selection; and that causes operating at broader scales, including catastrophes, have figured prominently in the course of evolution. Then, in a stunning tour de force that will likely stimulate discussion and debate for decades, Gould

proposes his own system for integrating these classical commitments and contemporary critiques into a new structure of evolutionary thought. In 2001 the Library of Congress named Stephen Jay Gould one of America's eighty-three Living Legends—people who embody the “quintessentially American ideal of individual creativity, conviction, dedication, and exuberance.” Each of these qualities finds full expression in this peerless

work, the likes of which the scientific world has not seen—and may not see again—for well over a century.

### **FULL HOUSE**

W. W. Norton & Company  
An illustrated natural history of the Earth and its denizens combines paintings, drawings, and computer-generated images with a chronicle of the world's variegated organisms and species.
