Teachers' Professional Lives Taylor & Francis

Lifelong learning has become a mantra, but what does learning mean in the lives of adults? How do we learn from life, and how do we learn for life?

Narrative Learning Routledge

First published in 2002. Routledge is an imprint of Taylor & Francis, an informa company.

The Role of Religion in the Tragedies Macmillan International Higher Education

The world of construction is intrinsically linked with that of finance, from the procurement and tendering stage of projects right through to valuation of buildings. In addition to this, things like administrations, liquidations, mergers, take-overs, buy-outs and floatations affect construction firms as they do all other companies. This book is a rare explanation of common construction management activities from a financial point of view. While the practical side of the industry is illustrated here with case studies, the authors also take the time to build up an understanding of balance sheets and P&L accounts before explaining how common tasks like estimating or valuation work from this perspective. Readers of this book will not only learn how to carry out the tasks of a construction cost manager, quantity surveyor or estimator, they will also understand the financial logic behind them, and the motivations that drive senior management. This is an essential book for students of quantity surveying or construction management, and all ambitious practitioners.

Environmental Science in Building Routledge

The first edition of *The Making of Curriculum* was published in 1988 and reviewers hailed it as a seminal work in the field. In that work Goodson explored a number of aspects of the so-called traditional subjects and described the way they develop over time to a point where they can be promoted as 'academic' disciplines. He showed that the claim to be academic was in fact the result of a substantial political contest covering a century or more. The traditional subject was, in short, invented. The first edition of this book provided a series of challenging insights for those desiring to make sense of the current debate over schooling. In this new and extended second edition, Bill Pinar adds an illuminating introduction and Goodson brings his argument up-to-date with a

discussion of the National Curriculum - 'a contemporary initiative in the making of curriculum.'

ANALYSIS, MATERIALS, DESIGN

Macmillan International Higher Education

"Environmental Science in Building covers the science, technology and services that relate to the comfort of humans and the environmental performance of buildings. The new edition of this well-established text continues with and improves the environmental narrative based on appropriate principles and technologies such as carbon, lifetime performance and ratings schemes. It also expands the building services content with new coverage of equipment options, specifications and performance implications."--Provided by publisher.

Studying School Subjects Routledge

To develop a mode of educational research which speaks both of and to the teacher we require more study of the lives of teachers. This book provides a vital insight into the ways in which teachers' backgrounds and career histories affect their teaching methods and approaches. Many issues are covered ranging from the question of teacher drop-out to the importance of teacher socialisation. The studies employ a range of different methodologies allowing the reader to assess their varying strengths and weaknesses, but throughout they reaffirm the centrality of the teacher in educational research.

STUDYING TEACHERS' LIVES

Routledge

Explains the fundamentals of structural analysis, materials and design. The relevance of the theory is made clear by applying the principles to realistic examples and emphasis is placed on understanding and developing a physical feel for the way that structures work. The necessary mathematics is explained and illustrated by numerous examples.

Computers and Quantity Surveyors Civil Engineering Quantities

In recent decades, there has been a substantial turn towards narrative and life history study. The embrace of narrative and life history work has accompanied the move to postmodernism and post-structuralism across a wide range of disciplines: sociological studies, gender studies, cultural studies, social history; literary theory; and, most recently, psychology. Written by leading

international scholars from the main contributing perspectives and disciplines, *The Routledge International Handbook on Narrative and Life History* seeks to capture the range and scope as well as the considerable complexity of the field of narrative study and life history work by situating these fields of study within the historical and contemporary context. Topics covered include:

- The historical emergences of life history and narrative study
 - Techniques for conducting life history and narrative study
 - Identity and politics
 - Generational history
 - Social and psycho-social approaches to narrative history
- With chapters from expert contributors, this volume will prove a comprehensive and authoritative resource to students, researchers and educators interested in narrative theory, analysis and interpretation.

The Routledge International Handbook on Narrative and Life History Macmillan International Higher Education

A straightforward account of the editorial and production processes used by journalists to bring television news to the viewer. It is an invaluable text for students on journalism courses, print and radio journalists moving into television and TV journalists wishing to update their knowledge. Takes into account the latest practices and issues in the television industry. This fourth edition has been thoroughly updated to take account of the latest practices and issues in the television industry. It includes new illustrations of developments from both a technological and an editorial perspective. In a changing broadcasting environment, newcomers to television journalism are finding themselves entering a world in which an empathy with technology is as important as a way with words. The newsroom itself is now completely computerized and consequently new skills and working methods need to be mastered to take account of the revolutionary advances.

Disciplines of Education Routledge

First published in 1967, this book suggests that educational problems should not, and indeed cannot, be solved in isolation, but that we need to bring all our disciplines and resources to bear upon them. It explores in turn philosophical, psychological and sociological approaches to educational theory and examines great thinkers such as Plato, R

Teachers' Lives And Careers Routledge

This book examines the key dimensions of 21st century war, and shows that orthodox thinking about war, particularly what it is and

how it is fought, needs to be updated. Accelerating societal, economic, political and technological change affects how we prepare, equip and organise for war, as well as how we conduct war – both in its low-tech and high-tech forms, and whether it is with high intensity or low intensity. The volume examines changes in warfare by investigating the key features of the conduct of war during the first decades of the 21st century. Conceptually centred around the terms ‘kinetic’, ‘connected’ and ‘synthetic’, the analysis delves into a wide range of topics. The contributions discuss hybrid warfare, cyber and influence activities, machine learning and artificial intelligence, the use of armed drones and air power, the implications of the counterinsurgency experiences in Iraq, Afghanistan and Syria, as well as the consequences for law(fare) and decision making. This work will be of much interest to students of military and strategic studies, security studies and International Relations. Chapters 1, 2, 5, and 19 of this book are freely available as a downloadable Open Access PDF under a Creative Commons Attribution-Non Commercial-No Derivatives 4.0 license available at <https://www.routledge.com/The-Conduct-of-War-in-the-21st-Century-Kinetic-Connected-and-Synthetic/Johnson-Kitzen-Sweijs/p/book/9780367515249>

PHILOSOPHICAL ESSAYS IN COMMEMORATION OF THE CENTENARY OF THE BIRTH OF ALFRED NORTH WHITEHEAD

Macmillan International Higher Education

This text aims to meet the needs of students studying building measurement in the early years of quantity surveying and building degree courses. 27 worked examples embracing all the principal building elements are included.

The Relevance of Whitehead CRC Press

This book is an extension to the worked examples contained in Building Quantities Explained. It aims to produce a selection of

worked examples, supported by comprehensive explanatory notes, and covering a reasonable range of constitutional components that the candidate may face in examination.

INTERNATIONAL PERSPECTIVES IN CURRICULUM HISTORY

Macmillan International Higher Education

Aimed at civil engineers and quantity surveyors and students of these disciplines in the preparation of bills of quantities.

Building Quantities Explained Routledge

The book fully explains the principles contained in the third edition of the Civil Engineering Standard Method of Measurement (CESMM3) and shows how they are implemented in practice. The contractual background to the measurement and valuation of civil engineering works is described in detail, as are the value and use of method-related charges. All aspects of the measurement of civil engineering work, from taking-off to bill preparation are covered; these are illustrated by some twenty-two worked examples containing working drawings and clear handwritten dimension sheets with fully explanatory notes. In addition to being completely revised and reset, the coverage is also extended with a further chapter on the measurement of the renovation of sewers and water mains.

Project Finance for Construction Macmillan International Higher Education

First published in 2004. Routledge is an imprint of Taylor & Francis, an informa company.

CIVIL ENGINEERING QUANTITIES. S.I

Macmillan International Higher Education

This book is directed primarily towards providing students and practitioners with a basic grounding in the use of computers by quantity surveyors. It is divided into two parts, the first part (Chapters 1 to 8) dealing with general concepts of information technology, and the latter part (Chapters 9 to 13) dealing with specific quantity surveying issues. Covers a wide range of topics:

computer hardware; operational and management implications of computer systems; legal issues; general purpose software such as word processors, spreadsheet systems and micro-computer based data manipulation packages; public information software; development of in-house software; artificial intelligence and expert systems; the use of computers in cost planning, production of bills of quantity, post contract work and project management and computer aided design. The book is extensively referenced.

Shakespeare's God Routledge

Published in 1968, "Negritos of Malaya" is an important contribution to the History Field.

Surveying for Engineers Macmillan International Higher Education First published in 1996. Routledge is an imprint of Taylor & Francis, an informa company.

Quantity Surveying Practice Macmillan International Higher Education

This handbook covers all the practices and procedures the quantity surveyor working in a contractor's office needs to know - from budgets and forecasts to cost-value comparisons and partnering. By giving a thorough account of the commercial aspects of the work of the contractor's QS, the book offers a useful insight into their day-to-day work, with plenty of sample documents, worked examples and extracts from the standard contracts. This is a practical manual but it also helps develop an understanding of the theory underpinning current practice. As the QS role becomes more complex, commercial managers wanting to maximise profitability will find the sound advice given here invaluable as it: ? demonstrates tried-and-tested best practice through practical examples ? provides a good grounding in financial management and cost analysis ? describes the need for benchmarking, the benefits of setting targets and the use of key performance indicators (KPI's) as a means of increasing project and company performance ? highlights the benefits of teamworking.
