The Psychology and  
Sociology of Wrongful  
Convictions Academic  
Press

In the post-genomic  
era, a holistic  
understanding of  
biological systems and  
p-  
cesses, in all their comple-  
xity, is  
critical in comprehendin

gnature's choreography  
of life. As a result,  
bioinformatics  
involving its two main  
disciplines, namely, the  
life sciences and the  
computational  
sciences, is fast  
becoming a very  
promising  
multidisciplinary  
research field. With the  
ever-increasing  
application of lar-  
scale high-  
throughput technologie  
s, such as gene or protein  
microarrays and mass

spectrometry methods, the enormous body of information is growing rapidly.

Bioinformaticians are posed with a large number of difficult problems to solve, arising not only due to the complexities in acquiring the molecular information but also due to the size and nature of the generated data sets and/or the limitations of the algorithms required for analyzing these data. Although the field of bioinformatics is still in its embryonic stage, the recent advancements in computational and information-theoretic techniques are enabling us to conduct various *in silico* testing and screening of many lab-based experiments before

these are actually performed *in vitro* or *in vivo*. These *in silico* investigations are providing new insights for interpretation and establishing a new direction for a deeper understanding. Among the various advanced computational methods currently being applied to such studies, the pattern recognition techniques are mostly found to be at the core of the whole discovery process for apprehending the underlying biological knowledge. Thus, we can safely surmise that the ongoing bioinformatics revolution may, in future, inevitably play a major role in many aspects of medical practice and/or the discipline of life sciences.

Case-mix Adjustment and Physician Practice Profiling Food & Agriculture Org. Profiles of Drug Substances, Excipients, and Related Methodology, Volume 43 presents comprehensive reviews of drug substances and additional materials, with critical review chapters that summarize information related to the characterization of drug substances and excipients. The series encompasses review articles and database compilations that fall within a variety of categories, with this release focusing on Ganciclovir, Mirtazapine, Tolfenamic Acid, Mid-Infrared Spectroscopy of Pharmaceutical Solids, and the Validation of

Chromatographic Methods of Analysis: Application for drugs that derived from herbs. Contains contributions from leading authorities Informs and updates on all the latest developments in the field of drug substances, excipients and methodologies

### **DEVELOPMENT AND EVOLUTION OF FORENSIC METHODOLOGY**

Academic Press  
The volume of literature in pentecostal theology has quickly become daunting. This brief monograph brings readers up to speed on the characteristics of pentecostal theology in the past and present, as well as its potential in the future.

### **Analyzing Sensory**

**Data with R** Springer Science & Business Media  
 Wrongful convictions are the result of faulty or false scientific evidence in 50% of the cases. Defense counsel is often at a great disadvantage in defending against evidence based on science. Illusory Evidence: The Psychology and Sociology of Wrongful Convictions is written for the non-scientist, to make complicated scientific information clear and concise enough for attorneys and judges to master. This is obtained by providing case studies to simplify issues in forensic psychology for the legal professional. Increases the courts' knowledge about areas of psychology that have been debunked,

have advanced, or have been refined by the scientific community Covers issues in psychological forensics, namely: Profiling, Psychological Defenses, Mitigation, Eyewitness Testimony/Identification, Child Testimony, Repressed Memories, False Confessions and Moral Panic Trains prosecuting attorneys about the present state of the forensic psychology, to avoid relying only on legal precedent and will not present flawed science to the court Provides defense attorneys the knowledge necessary to competently defend where forensic psychology plays a part in a prosecution Arms innocence projects and appellate attorneys with the latest information to

challenge convictions  
Uses case studies to  
simplify issues in  
forensic psychology for  
the legal professional

This book constitutes  
the proceedings of the  
9th International  
Conference on Big  
Data, BigData 2020,  
held as part of SCF  
2020, during  
September 18-20,  
2020. The conference  
was planned to take  
place in Honolulu, HI,  
USA and was changed  
to a virtual format due  
to the COVID-19  
pandemic. The 16 full  
and 3 short papers  
presented were  
carefully reviewed and  
selected from 52  
submissions. The

topics covered are Big  
Data Architecture, Big  
Data Modeling, Big  
Data As A Service, Big  
Data for Vertical  
Industries  
(Government,  
Healthcare, etc.), Big  
Data Analytics, Big

Development of a  
Methodology to Solve  
Economic and Political  
Problems in Medicare

CRC Press

As markets have become increasingly saturated, companies have acknowledged that their business strategies need to focus on identifying those customers who are most likely to churn. To address this, a method is required that can identify these customers, so that proactive retention campaigns can be deployed in a bid to retain them. To further complicate this, retention campaigns can be costly. To reduce cost and maximise effectiveness, churn prediction has to be as accurate as possible to ensure that only the customers who are planning to switch their service providers are being targeted for retention. Current

techniques and research as identified by literature focus primarily on the instantaneous prediction of customer churn. Much work has been invested in this method of churn prediction and significant advancement has been made. However one of the major drawbacks of current research is that the methods available do not provide adequate time for companies to identify and retain the predicted churners. There is a lack of time element in churn prediction. Current research also fails to acknowledge the expensive problem of misclassifying non-churners as churners. In addition, most research efforts base their analysis on

customer demographic and usage data that can breach governing regulations. It is proposed in this research that customer complaints and repairs data could prove a suitable alternative. The doctoral research presented in this thesis aims to develop a customer profiling methodology for predicting churn in advance, while keeping the misclassification levels to a minimum. The proposed methodology incorporates time element in the prediction of customer churn for maximising future churn capture by identifying a potential loss of customer at the earliest possible point. Three case studies are identified and carried out for validating the

proposed methodology using repairs and complaints data. Finally, the results from the proposed methodology are compared against popular churn prediction techniques reported in literature. The research demonstrates that customers can be placed into one of several profiles clusters according to their interactions with the service provider. Based on this, an estimate is possible regarding when the customer can be expected to terminate his/her service with the company. The proposed methodology produces better results compared to the current state-of-the-art techniques.

A fishing fleet profile

aims to assist in

understanding the

complexity and

structure of fisheries

from a technical and

socio-economic point

of view, or from the

point of view of fishing

strategies. A profile

consists of analysing

the characteristics of

individual units of the fleet, for example the boats, in order to classify these units. This document describes the steps necessary to produce such a profile, from planning and the implementation of the fleet survey, through data processing to the presentation of the results. The processes of analysis, classification and description require the application of specific statistical methods in order to extract the items of information. Various methods of data analysis are presented here in order to demonstrate their potential uses and relevance to different situations. The Moroccan inshore fishery and the Senegalese small-scale fisheries have been

used as examples in this document (FAO Website). [Disinfection Profiling and Benchmarking Guidance Manual](#) Springer Science & Business Media Profile-driven optimization can produce substantial improvements in the quality of code produced by a compiler or link-time optimizer. In this work, we analyze several important aspects of profile-driven optimization. We examine the effectiveness of profile-driven optimization in two commercial-quality optimizers (Digital's GEM compiler and the link-time optimizer 'alto'). We perform analyses to determine how much variability in profile-driven optimization

performance results from choosing different training profiles, and to determine how much optimization benefit results from choosing more 'accurate' profiles (that is, profiles that better predict the way that a program is actually run). We examine low-overhead profiling methods such as static estimation (estimating profiles using static heuristics) and statistical sampling (gathering profiles by sampling only a small number of basic block executions). We analyze some profile-driven optimization results in great detail, and show a methodology for accounting for the profile-driven optimization effects of profile data associated with individual

functions. Our results show that profile-driven optimization is effective on average, but unreliable when considering any individual benchmark. Using more accurate profiles is only weakly connected to improved profile-driven optimization performance for most benchmarks. However, low-overhead profiling techniques result in substantial degradations in the reliability and average performance of profile-driven optimization, often to the point of rendering the entire profile-driven optimization process useless. Our analysis also shows that the effects of profile-driven optimization are highly concentrated in the profile data associated with a few functions.

Whether profile data improves or worsens the performance of optimized code, it is often possible to attribute the vast majority of this effect to the profile data associated with just a few functions.

IGI Global  
The Handbook of Behavioral Genetics and Phenotyping represents an integrative approach to neurobehavioural genetics; worldwide experts in their field will review all chapters. Advanced overviews of neurobehavioural characteristics will add immense value to the investigation of animal mutants and provide

unique information about the genetics and behavioural understanding of animal models, under both normal and pathological conditions. Cross-species comparisons of neurobehavioural phenotypes will pave the way for an evolutionary understanding of behaviour. Moreover, while biological sciences are progressing towards a holistic approach to investigate the complexity of organisms (i.e., "systems biology" approach), an integrated analysis of behavioural phenotyping is still lacking. The Handbook of Behavioral Genetics and Phenotyping strengthens the cross-talk within disciplines

that investigate the fundamental basis of behaviour and genetics. This will be the first volume in which traditionally distant fields including genomics, behaviour, electrophysiology, neuroeconomics, and computational neuroscience, among others, are evaluated together and simultaneously accounted for during discussions of future perspectives.

Profile and Marketing Characteristics of Reporter Readers, 1965 Duke University Press

The MODELS series of conferences is the premier venue for the exchange of -novative technical ideas and experiences focusing on a very important new te- nical discipline:

model-driven software and systems engineering. The expansion of this discipline is a direct consequence of the increasing significance and success of model-based methods in practice. Numerous e?orts resulted in the invention of concepts, languages and tools for the de?inition, analysis, transformation, and verification of domain-specific modeling languages and general-purpose modeling language standards, as well as their use for software and systems engineering. MODELS 2010, the 13th edition of the conference series, took place in Oslo, Norway, October 3-8, 2010, along with numerous satellite workshops, symposia and tutorials. The

conference was fortunate to have three prominent keynote speakers: Ole Lehrmann Madsen (Aarhus University, Denmark), Edward A. Lee (UC Berkeley, USA) and Pamela Zave (AT&T Laboratories, USA). To provide a broader forum for reporting on scientific progress as well as on experience stemming from practical applications of model-based methods, the 2010 conference accepted submissions in two distinct tracks: Foundations and Applications. The primary objective of the first track is to present new research results dedicated to advancing the state-of-the-art of the discipline, whereas the second aims to provide a realistic and

verifiable picture of the current state-- the practice of model-based engineering, so that the broader community could be better informed of the capabilities and successes of this relatively young discipline. This volume contains the final version of the papers accepted for presentation at the conference from both tracks.

**5th International Workshop, SAM 2006, Kaiserslautern, Germany, May 31 - June 2, 2006, Revised Selected Papers** Springer

This book constitutes the refereed proceedings of the 13th International Conference on Intelligent Data Engineering and

Automated Learning, IDEAL 2012, held in Natal, Brazil, in August 2012. The 100 revised full papers presented were carefully reviewed and selected from more than 200 submissions for inclusion in the book and present the latest theoretical advances and real-world applications in computational intelligence.

*Handbook of Research on Mixed Methods Research in Information Science* Frontiers Media SA Mixed methods research is becoming prevalent in many fields, yet little has been done to elevate mixed methods research in information science. A comprehensive picture of information science and its problems is

needed to further understand and address the issues associated with it as well as how mixed methods research can be adapted and used. The *Handbook of Research on Mixed Methods Research in Information Science* discusses the quality of mixed methods studies and methodological transparency, sampling in mixed methods research, and the application of theory in mixed methods research throughout various contexts. Covering topics such as the issues and potential directions for further research in mixed methods, this comprehensive major reference work is ideal for researchers, policymakers, academicians, librarians,

practitioners,  
instructors, and  
students.

Methodology* Springer  
This book represents  
the emerging efforts of  
a growing international  
network of researchers  
and practitioners to  
promote the  
development and  
uptake of evidence-  
based pedagogies in  
higher education, at  
something a level  
approaching large-  
scale impact. By  
offering a  
communication venue  
that attracts and  
enhances much  
needed partnerships  
among practitioners  
and researchers in  
pedagogical

innovation, we aim to change the conversation and focus on how we work and learn together – i.e. extending the implementation and knowledge of co-design methods. In this first edition of our Research Topic on Active Learning, we highlight two (of the three) types of publications we wish to promote. First are studies aimed at understanding the pedagogical designs developed by practitioners in their own practices by bringing to bear the theoretical lenses developed and tested in the education research community. These types of studies constitute the "practice pull" that we see as a necessary counterbalance to

"knowledge push" in a more productive pedagogical innovation ecosystem based on research-practitioner partnerships. Second are studies empirically examining the implementations of evidence-based designs in naturalistic settings and under naturalistic conditions. Interestingly, the teams conducting these studies are already exemplars of partnerships between researchers and practitioners who are uniquely positioned as "in-betweens" straddling the two worlds. As a result, these publications represent both the rigours of research and the pragmatism of reflective practice. In forthcoming editions, we will add to this collection a third type

of publication -- design profiles. These will present practitioner-developed pedagogical designs at varying levels of abstraction to be held to scrutiny amongst practitioners, instructional designers and researchers alike. We hope by bringing these types of studies together in an open access format that we may contribute to the development of new forms of practitioner-researcher interactions that promote co-design in pedagogical innovation.

Choose the Proper Statistical Method for Your Sensory Data Issue  
Analyzing Sensory Data with R gives you the foundation to analyze and interpret sensory data. The book helps you find the most appropriate statistical method to tackle your sensory data issue. Covering quantitative, qualitative, and affective approaches, the book presents the big picture of sensory evaluation. Through an integrated approach that connects the different dimensions of sensory evaluation, you'll understand: The reasons why sensory data are collected The ways in which the data are collected and analyzed The intrinsic meaning of the data

The interpretation of the data analysis results Each chapter corresponds to one main sensory topic. The chapters start with presenting the nature of the sensory evaluation and its objectives, the sensory particularities related to the sensory evaluation, details about the data set obtained, and the statistical analyses required. Using real examples, the authors then illustrate step by step how the analyses are performed in R. The chapters conclude with variants and extensions of the methods that are related to the sensory task itself, the statistical methodology, or both.

## **BIOLOGICAL APPLICATIONS**

Springer  
Volumes in this widely revered series present comprehensive reviews of drug substances and additional materials, with critical review chapters that summarize information related to the characterization of drug substances and excipients. This organizational structure meets the needs of the pharmaceutical community and allows for the development of a timely vehicle for publishing review materials on this topic. The scope of the Profiles series encompasses review articles and database compilations that fall within one of the following six broad

categories: Physical profiles of drug substances and excipients; Analytical profiles of drug substances and excipients; Drug metabolism and pharmacokinetic profiles of drug substances and excipients; Methodology related to the characterization of drug substances and excipients; Methods of chemical synthesis; and Reviews of the uses and applications for individual drug substances, classes of drug substances, or excipients. Presents comprehensive reviews covering all aspects of drug development and formulation of drugs Profiles creatine monohydrate and fexofenadine hydrochloride, as well as five others Meets

the information needs of the drug development community

## **UML MODELING LANGUAGES AND APPLICATIONS**

Springer  
This book introduces a novel design methodology which can significantly reduce the ASIP development effort through high degrees of design automation. The key elements of this new design methodology are a powerful application profiler and an automated instruction-set customization tool which considerably lighten the burden of mapping a target application to an ASIP architecture in the initial design stages. The book includes several design case

studies with real life embedded applications to demonstrate how the methodology and the tools can be used in practice for accelerating the overall ASIP design process.
