This report presents the
findings and
recommendations on the
evaluation of High Density
Polyethylene (HDPE) Pipe
resulting from a 1996
Transportation
Enhancement/Hazard

Elimination Project in
Martin, South Dakota. This
was the first project
where HDPE pipe was
allowed to be installed
under a state highway in
South Dakota.
Department researchers
installed instrumentation
and conducted deflection
testing on a 760 mm (30
in) HDPE pipe installed
under US Highway 18 in
Martin, South Dakota. A
horizontal inclinometer
probe was used to
determine vertical heave
or settlement. Surface
profiles were monitored
with a Dipstick® Floor

Profiler. Thirteen separate sets of measurements were taken between August 1996 and June 1997. Costs were determined for installation and delivery of both HDPE pipes and reinforced concrete pipes (RCP). Neighboring states were surveyed to determine their costs for storm sewer pipes as well as specifications for installing HDPE pipes. Recommendations were made to allow the installation of HDPE pipe based on information received from the state

survey, literature reviews, and the results of the Martin, South Dakota Project.

"Code of Massachusetts regulations, 2007"

Published by the Plastics Pipe Institute (PPI), the Handbook describes how polyethylene piping systems continue to provide utilities with a cost-effective solution to rehabilitate the underground infrastructure. The book will assist in designing and installing PE piping systems that can protect utilities and other end

users from corrosion, earthquake damage and water loss due to leaky and corroded pipes and joints.

ASTM Standardization News

Trenchless Technology

The evaluation and use of plastics in the construction industry are explained. The contributors offer

extensive, timely, and thoroughly researched data on the chemistry, properties, functions, engineering behavior, and specific applications of plastics to building requirements. The major subjects discussed in depth are--(1) the role of plastics in construction, (2) the plastic materials, (3) building codes and regulations, (4) construction aids, (5) structural fiber-glass reinforced plastics, (6) reinforced plastic shell structures, (8) paints, sealants, flooring, and

roofing, (9) plastic for walls and doors, (10) plastic foams in thermal insulation, (11) pipe and plumbing, (12) utilities, (13) lighting, (14) permanent fixtures, and (15) the use of plastics in other countries. (Tc)
