Explain the complexity of the universe through a hierarchical framework that includes consideration of Earth, life, and ecosystems at various scales.Chapter 1 ~ Ecosystems and Humans - Environmental ScienceWhat is a Terrestrial Ecosystem? The type of ecosystems which are predominantly found on land are called the terrestrial ecosystems. Terrestrial ecosystems cover approximately 140 to 150 million km², which is about 25 to 30 percent of the total earth surface area.Terrestrial Ecosystem- An Overview and their TypesAn ecosystem is a community of both living and non-living entities of a particular region, that is in constant interaction with each other, maintaining the ecological balance. The biotic or living entities are constituted by humans, plants, and animals while the abiotic or non-living entities are rock, soil, water, air, and other such related components of that region.MSBSHSE Class 8 Science Chapter 18: Ecosystems Important ...The open ocean consists of pelagic and benthic ecosystems. The pelagic (open-water) ecosystem is strongly influenced by physical and chemical factors, particularly waves, tides, currents, salinity, temperature, light intensity, and nutrient concentration. The rate of productivity is small, and comparable to that of terrestrial desert.Chapter 8 ~ Biomes and Ecozones - Environmental ScienceEcosystems are dynamic entities and subject to a variety of abiotic and biotic disturbances caused by natural forces and/or human activity. Ecosystems altered from their initial equilibrium state can often recover from such disturbances and return to a state of equilibrium.Chapter 11: Ecosystems - Human BiologyPrentice Hall Earth Science Chapter Test
